In the case of Snell and Others *v.* Finch, tried at the Spring Assizes, Kingston, on the 2nd inst., the chief question raised was, when houses or buildings can be deemed to be completed.

In November, 1861, one Mead took from the plaintiff Snell a building lease of land, containing two covenants, one to complete the houses, so as to be habitable, by the 29th of September, 1862, and a "substantial fence" by the 23rd of May, 1862. Mead, the lessee, borrowed large sums of money from various persons; among others from Finch, the defendant, on mortgage; and he also made sixteen under-leases, and took mortgages from his sub-lessees. The property in question was a piece of land on which six houses were built. Mead had mortgaged the property in question to Finch, the defendant, and afterwards became bankrupt. Finch, who was assignee of his lease, had possession in March, 1862, but it was contended on his behalf that Snell's attorney had kept him out of possession for some time. Disputes then arose between Finch, the assignee of the lessee, Snell the lessor, and the other parties, mortgagees, as to the accounts and priorities of the securities, &c.; and on the 4th of December, 1862, Finch commenced a suit in equity against him for an account and for certain equitable relief. On the 22nd of December, 1862, Snell, the lessor, commenced this action against him to recover the premises, forfeited under the condition to complete the houses and the fence by the 29th of September, 1862.

There was a great deal of evidence on both sides as to whether the houses had been completed. It turned out in the course of the case that there had not been a continuous fence along and around the whole of the property, according to the covenant. But it was contended that the way in which the houses were built—quite flush with the foot-pavement,—precluded this, and made it impracticable; and that the lessor, having been constantly on the premises and tacitly assented to it, had waived the forfeiture; and in particular a conversation between the builder and the attorney of the lessor—who, it was said, had to a great extent the management of the property,—was relied on as a waiver of the forfeiture so far as regarded the fencing.

The chief conflict of evidence was as to the completion of the houses. On the part of the plaintiff (the lessor), witnesses were called to prove that on the 29th of September, 1862, the houses were not completed, stating that the papering was not done, that the sewers and waterpipes were not "completed," &c. On the part of the defendant, the lessee, the builders and workmen who had been employed on the houses were called to show that they had, in fact, been completed by the 29th of September, 1862, and that any work done after that date was in doing certain work over again, which had, in fact, been done in due time, though it turned out that it was desirable to do it over again. In particular, as to the sewer and waterpipes, it was contended that all that required to be done was to connect them with the main drain or pipes in the streets; and, as regarded the papering, it was admitted that parts of it required to be done again by reason of damp in the plaster work; arising, as was also admitted, from its not having been sufficiently dry before the paper was put on, so that it "sweated."

The Lord Chief Justice, in summing up the case to the jury, said the most important part of the question as to breach of covenant was as to the completion of the houses "so as to be habitable." They had been so completed in October: had they been so completed in September? Men, no doubt, had been at work in the houses after September: part of the papering had to be done over again; and certain other matters likewise were done after that time. The question for the jury was, whether all this had or had not been sufficiently explained. Had the houses been completed in due time—reasonably fit for habitation?

The result was a verdict for the defendant.

PATENTS CONNECTED WITH BUILDING.*

Machinery for Moulding Bricks, Tiles, Pipes, and Turf. — *E. Schlickeysen*, Berlin. Dated 3rd May, 1862.—This invention cannot be described without reference to the drawings.

Apparatus for Heating or Warming Rooms or Buildings with Steam.—*T. O. Dixon.* Dated 3rd July, 1862.—This invention consists, First, in arranging the steam-pipes, or the pipes for conducting and circulating the steam for heating or warming rooms, in such manner as that the condensed steam or water may be drawn off into a receiving-pipe at various points in the line or circuit, and being conducted thence to a "syphon-box" or steam-trap; steam being also conducted by a separate pipe thereto, from the end of the line or circuit, by which arrangement breakage of joints in the pipes is prevented. Secondly, in the employment of an equilibrium in combination with a float lever in the "syphon-box" or steam trap, by means of which the condensed steam or water is carried off, or is permitted to escape without allowing any steam to pass off.

Improvements in the Manufacture of Pigments or Paints from certain Refuse Materials.—*A. Warner.* Dated June 20th, 1862.—This invention has for its object the application of the refuse or slag obtained from puddling and re-heating or other furnaces used in the manufacture of pigments or paints. For this purpose the patentee takes the refuse or slag above referred to, and reduces the same to a fine powder by any of the well-known mechanical operations for grinding or pulverizing similar materials or other hard substances. The ground or pulver-

* Selected from the lists in the *Engineer*, *Mechanics' Magazine*, &c.

ized materials are then to be washed or otherwise treated, and combined with oil or other materials, and used as pigments or paints for various purposes, as is well understood in the manufacture of pigments or paints from other oxides of iron or other metals. For the purpose of producing the slag or cinder to a fine or impalpable powder, the patentee prefers to use grinding apparatus, such as is used for grinding flints for pottery purposes, the materials being ground in water. After being sufficiently ground, the materials are run off into a tank and allowed to subside, and then the water is run off from the surface, and the wet, slimy mass is spread upon heated flues, or the material may be dried by other means. The pigment or substance thus prepared must then be taken and made up into paint by mixing with water or oil, and may be used in combination with colours and with dryers, according to the purpose for which it is required.

IMPROVEMENTS IN SCREW CLAMPS OR CRAMPS FOR JOINERS AND OTHER WORK.—*H. F. Wells.* Dated April 29, 1862. This invention consists in the use of a notched or plain bar of metal of any desired length, according to the purpose to which the cramp is to be applied, with one or more sliding arms formed in the manner described. When one arm only is used, the end of the bar is turned up to form an abutment or pressing surface, against which one side of the material to be clamped, cramped, or compressed, is placed. The sliding arm is self-fixing by its peculiar form, and when placed in the proper position upon the bar forms the other abutment. An adjusting screw, fitted either in the head of the bar, or in the end of the sliding arm, or in both, completes the cramp. In place of twining one end of the bar up, a plain bar, notched in opposite directions, and two sliding arms, may be added. The sliding arms are formed with a hole or slot at one end, through which the bar can be passed. The arms can thus be moved along the bar to any required position.

A NEW COMPOSITION FOR CASTING TO REPRESENT MARBLE.—*A. Prince.* A communication. Dated April 30, 1862.—The patentee claims the composition formed of minerals and waterglass, or silicate of soda, or potash, or both, substantially in the manner specified, constituting a substitute for gypsum and marble, for the purpose of casting copies of figures, busts, relievos, and articles of sculpture of every kind, &c.

IMPROVEMENTS IN THE MANUFACTURE AND PRODUCTION OF MINIUM, OR RED LEAD.—*J. H. Johnson.* A communication. Dated May 6, 1862.—This consists in the conversion of the oxide of lead, when free or uncombined, and of certain base salts of lead, into minium or red lead, by mixing the same with either carbonate of potash or carbonate of soda, or mixtures of the same, and subjecting such mixtures to the action of an elevated temperature, whereby the oxide of lead is oxidized, and is converted into minium or red lead.

AN IMPROVEMENT IN MACHINERY OR APPARATUS USED IN THE MANUFACTURE OF MALLEABLE IRON AND STEEL.—*E. B. Wilson.* Dated May 5, 1862.—This relates to the vessel in which the molten metal is treated during its conversion into malleable metal or steel, and consists in providing such vessel with a central, or nearly central, exit for the gases, such exit or escape passage dipping at its lower lip into the molten metal, and extending to within a short distance from the bottom of the vessel, at or near the centre thereof. A space is left round the gas exit passage between its exterior sides and the inner sides of the vessel, with the exception of a portion on one side, which is left to form a convenient outlet for emptying the vessel. Provision is also made for hanging the vessel on centres or pivots at each side thereof. The molten metal having been run into the vessel, air is blown therein at one or more separate points of, or entirely round, the top space, which air, after passing under the lip, permeates the molten metal and escapes with the gases up the outlet.

FIRE-PLACES AND STOVES.—A communication. *F. C. Bakewell.* Dated 3rd September, 1862.—The patentee claims, 1st, the use of air passages or recesses in the back wall of the grate extending from below the fire-basket to any desired height above the grating on which the fuel is placed. 2nd, the use of flaps, or other equivalent device, for closing at pleasure the spaces between the grate bars on which the fuel rests, for the purpose of preventing the rapid combustion of the fuel. 3rd, the use of a screw placed over the smoke-flue for the purpose of preventing the fall of soot and dirt into the apartment, and for conducting these substances to suitable receptacles from which they may be removed from time to time. 4th, the combination of the air-flue, the dust-pipe, and screen described, or any of them, with a fire-place or stove, for the purposes set forth.

IMPROVEMENTS APPLICABLE TO THE BURNING OF BRICKS, TILES, &c. — *J. Platt and W. Richardson.* Dated 4th September, 1862.—This invention consists in a method of heating a filled kiln in a preparatory manner; and this the patentees accomplish by transferring thereto the heat from a separate kiln in which the burning of the bricks or other articles has been effected. For this purpose they employ a blast of air which passes from the top of the heated kiln to the lower part of that in which the articles to be burnt are placed.

PREPARATION OF CLAY FOR THE MANUFACTURE OF BRICKS, TILES, &c.—*J. Platt and W. Richardson.* Dated 4th September, 1862.—The apparatus for carrying out this invention cannot be described without reference to the drawings.

MACHINERY FOR CUTTING VENEERS.—*J. B. Childs.* A communication. Dated 12th August, 1862.—The log or block is firmly secured to a bed-plate by means of bolts which pass through the bed-plate and screw into the log or block. The bed-plate is perforated with holes at equal distances apart, and a sufficient number of them to receive a requisite number of bolts to hold the block firmly thereto. The bed-plate may be placed in a vertical, horizontal, or diagonal position, but it is preferred to place it in a vertical position. The bed-plate, together with the block carried thereby, has a motion up and down a distance somewhat over and above the width of the largest block to be cut; and this motion is, by preference, communicated to it by means of two cranks and two connecting rods, one at each end of the bed-plate. The knife, when making the cut, is stationary, but is capable of being moved towards and from the bed-plate by the action of the feed motion, which, by means of a double ratchet, causes it to recede immediately after the cut, and again to move forward immediately before the cut a distance depending on the thickness of the veneer next to be cut. The knife consists of a straight cutting edge, with one side bevelled off; and is firmly secured to a knife-block which is made to slide towards and from the bed-plate. A little before the edge of the knife there is a pressure bar, made adjustible by set screws, and bolted firmly in its required position to a pressure beam. The invention also consists in the method of feeding the knife, and of graduating the feed to the different thicknesses of veneers to be cut.

FOUNDATION OR GROUNDWORK FOR PLASTER FOR CEILINGS, WALLS, PARTITIONS, &c.—*J. Nickson & T. Waddingham, jun.* Dated 1st September, 1862.—This invention consists in the use of plates or slabs of slate, metal, earthenware, or other similar and suitable material, perforated with round, square, or other shaped holes, or with oblong slots, for the purpose of retaining the plaster; a space being left between the adjoining edges of the plates, when placed in position, for the same purpose. The said plates are nailed or otherwise attached to the joists, spars, or battens, and are made of a suitable size to cover the spaces between the same; or they are attached to studs projecting at suitable intervals from the surface of the wall to be covered, so as to leave a space between the wall and the plastering, which is more particularly adapted to the outer walls of buildings, or to walls exposed to damp.

Books Received.

A Vacation Tour at the Antipodes; in 1861-1862. By B. A. HEYWOOD, M.A., Trinity College, Cambridge. London: Longman & Co. 1863.

MR. HEYWOOD, being advised to take a long vacation and a thorough change of air, thought he could not more efficiently carry out the recommendation than by making a trip to the far end of our little planet; and certainly he was much more likely to obtain a thorough "change of air" in Australia and New Zealand than at Brighton or Margate. It constitutes an epoch in the history of the globe, and shows us rather startlingly how rapid are our advances towards a thorough exploration of all its nooks and corners, when we find a voyage to the antipodes selected as a hurried vacation tour for recruitment of health and energy by "change of air."

Mr. Heywood's volume contains a plain, sensible, and popular narrative of what he saw and heard in Australia, Tasmania, and New Zealand; and is valuable as a record of cursory and popular impressions of those thriving colonial countries. His volume is illustrated by views of the Parliament House at Melbourne, the University of Sydney, and other engravings and maps; including a pocket map of Australia and New Zealand, with one of a portion of the Otago gold-fields, near Dunedin, an engraved view of which New Zealand "city" is also given.

Every Man's Own Lawyer; a Handy Book of the Principles of Law and Equity. By a Barrister. London: Lockwood & Co. 1863.

"SIX AND EIGHTPENCE saved at every consultation," says the outside of this little volume; and there is no doubt that in many cases money *may* be saved by consulting its pages. This will chiefly be the case, however, when used to learn what may *not* be done; and if all knew what can be done and what cannot, many law-suits and much wasteful expenditure would be avoided. With some omissions (the Building Act, for example, is not referred to) this book contains a condensed account of the great body of English law,—no more of it, indeed, than every Englishman is expected to be acquainted with.

A Practical Treatise on Calcareous and Hydraulic Limes and Cements, compiled and arranged from the best authorities. By JAMES G. AUSTIN, Architect. London: Trübner & Co. 1862.

THIS little book, originally published in America, makes no pretensions to originality, and has none, consisting for the most part of extracts from the well-known works of Higgins and Pasley; chiefly from that of the former. They who have not these works will find Mr. Austin's compilation instructive and useful.

Hints on the Formation of local Museums. By the Treasurer of the Wimbledon Museum Committee. London: Hardwicke, 1863.

THE Wimbledon Museum has been based upon a village club which has been in successful operation at Wimbledon for some years, on terms which enable artisans, labourers, &c., to benefit by the privileges which the club enjoys. The present little volume cannot but be of considerable use in the promotion and establishment of local museums and clubs; and there is not a village in England which might not have an interesting museum solely made up of local objects of interest in geological and mineral, botanical and zoological, as well as antiquarian and other departments.

VARIORUM.

Experimental Essays, by Charles Tomlinson (Virtue, Brothers, & Co., Paternoster-row), treating of the motion of camphor on water; the motion of camphor towards the light; and the modern theory of dew. It is a delightful little book, and is evidently intended to find its way into the hands of young people, by whom most of the experiments may be performed without danger and with great advantage. The author says, truly, "Nature speaks so lovingly to the young, and they respond so willingly, that we may well take advantage of this circumstance to gratify a taste which encourages the order, method, and exactness of science."——The February number of the *Giornale dell' Ingegnere-Architetto ed Agronomo* contains a large outline engraving of the façade of the Church of S. Domenico at Casalmonferrato. Signor Pareto has brought to light an inscription showing the date of the front to be 1506.

Miscellanea.

ROYAL SOCIETY.—There are 45 candidates for whom the 15 to be elected are to be chosen. Of the 45, 16 are connected with the medical profession.

INSOLUBLE CEMENT.—A Frenchman has, it is said, discovered an insoluble cement in the common snail. At the extremity of the snail's body there is a little white bladder, containing a gelatinous, fat-looking substance. If this be extracted and the liquid applied to the edges of the broken glass or china, and time given for this natural cement to dry, the parts will hold together so firmly that the mended article is stronger at the united parts than elsewhere. You may break the article, but cannot separate the parts.

Building at Brechin.—Building prospects are in the ascendant here at present, says the *Montrose Review*. The coach-work in Clerk-street, and coach-houses and stables at the top of Bank-street, are progressing towards completion. Mr. John Baxter, has got the contract for the large additions and improvements at Brechin Castle. The plans are by Mr. Bryce, of Edinburgh, architect. The work will soon be commenced. The specifications for the new Farmers' Hall, or City Hall Buildings, are ready for being put into the hands of contractors. There is not likely to be much delay in carrying out this part of the projected improvements in Swan-street.

A Sub-draining Railway Pavement.—Mr. L. Stebbins, of Worcester, Mass., has invented a sub-draining railway pavement, with which he proposes to cover the entire area of streets. It is made of iron; each block about 2 feet square on the surface, and 2½ inches deep. There are four keys or square bolts to each square foot of surface. These keys rise three-eighths of an inch above the surface, and yield to the pressure of the horse's hoof. Each key rests on a rubber spring, which is secured in an iron tube. The inventor claims that it affords the best known surface for wheels to roll on; renders the slipping of horses impossible; and prevents, to a great extent, the accumulation of dirt, reducing the expense of cleaning streets.

Photographing Copyright Engravings.—In the action, Gambart *v.* Sclater, in the Sheriff's Court, London, Mr. Gambart, the well-known printseller of Pall-mall, sought to recover of the defendant, a shopkeeper at Canterbury, damages for selling photographs of Holman Hunt's "Light of the World," of which he had the copyright. The defendant did not plead, and the only question was the amount of damages to be awarded. Mr. Gambart stated that he gave Mr. Holman Hunt 200 guineas for the privilege of engraving the picture. He paid for the engraving over 300 guineas, and 130*l.* to the owner of the picture for allowing the engraving to be made. With other expenses, the print cost him about 2,000*l.* to bring out. It was the most successful he had ever produced, and for the first year his profits were upwards of 10,000*l.* For the last two years the sale had fallen off, and he found that photographers had copied the print, and he was for his own protection obliged to bring actions. His price was from two to eight guineas, and photographers could produce them for a few shillings: some could be sold for 1½d. The jury assessed the damages at 100*l.*

Treasure Trove: Druidical Antiquities.—Most people have heard, we dare say, of the recent turning up, in a ploughed field at Mountfield, in Sussex, of a weighty chain and rings of gold, worth 550*l.* as mere metal, being 11 lb. weight; but sold, by the labourer who found it, as old brass, for 6d. a lb., or 5s. 6d. in all, to a knowing blacksmith, who sold it at its full value to London gold-melters, who found it to be Barbary gold, but do not seem to have had any regard for its value as an antiquity. At the inquest held to ascertain the Queen's right to the treasure trove, the labourer thus described his five-and-sixpenny treasure: "I ploughed up a long piece of metal: it was in a hole a little deeper than a foot: it was about a yard long, with two 'trumpets' at each end, twisted in three grooves. We also found a great number of rings, some of which were larger than the others. The larger rings were round, but did not shut to." Two other pieces were afterwards dug up, and were produced before the coroner and jury. During the examination Knight's "Old England" was produced, and several witnesses who had seen the gold agreed in stating that portions of it corresponded with the ornaments round the neck of a Druid, as shown in plate 9; and that the rings, &c., corresponded with a group of British coins in plate 21. The jury decided that the whole of the treasure-trove belonged to the Queen. The coroner, as has often been done by the press, explained that if persons, on finding treasure of this description, gave notice in the proper quarter, it was the practice of the Crown, if the articles found were of much value from their antiquity, to reward the finding the treasure by its money worth, the articles themselves being appropriated to the public use, and placed in the British Museum. Nevertheless, we may add, the public do not seem to be sufficiently informed of this even yet; and it would be well were the press to repeat it prominently on every such occasion as the present. Surely the gold-melters can have no such excuse as that of ignorance, however; and if any one is to be made responsible in the present instance they ought.

The New Street from London Bridge to Stamford-street.—The contract for the completion of the new street, subway, and sewers from London Bridge to Stamford-street, Blackfriars-bridge-road, has been let to Mr. Pearson, and is now commenced.

The Royal Wedding Presents.—We understand that the exhibition of the wedding presents of the Prince and Princess of Wales will be opened to the public on Thursday, the 16th of April, in the Italian Sculpture Court of the South Kensington Museum. There will be a private view on Wednesday evening. The free and students' days will be kept as usual.

Testimonial.—The carpenters in the employ of Mr. R. Freeman, contractor for the extensive works now going on in Ely Cathedral, met, on the occasion of the removal of the present clerk of the works, Mr. R. H. Norris, at the Lamb Hotel, and presented him, according to the *Cambridge Chronicle*, with a handsome gold pin, with a diamond set in star, for the kind advice and able superintendence over the workmen during a residence of twelve months. The testimonial was presented by Mr. Bailey with some suitable remarks, appropriately replied to by Mr. Norris.

Coating Iron to Prevent Oxidation.—A proposition has been laid before the Admiralty by Mr. Walenn, a London chemist, to coat iron of any size, from a ship's bottom itself, as one whole, to a single bolt for the armour-plate,—extent of material or shape being no objection,—with a deposit of metal, such as brass or any other alloy, as thin or as thick in substance as may be wished, with a bright, hard, enamelled surface. This would prevent the oxidation of ships' armour and bolts, and the fouling of iron ships' bottoms. Mr. Walenn has been directed to proceed to Portsmouth Dockyard to inspect the existing arrangements of baths and batteries now adopted there, and to send in to the Admiralty a special report, with accompanying estimates of his proposed plan of electrotyping.

Sanitary State of Leeds.—The first case has just come before the Leeds magistrates in which the board of guardians have taken legal proceedings in conformity with the recent decision to co-operate with the town-council in carrying out the Nuisances and Diseases Prevention Act. Their complaint was that the owner of property in Poland-street, Leeds, permitted the existence of a drain containing foul and offensive matter prejudicial to health, and also suffered a privy to remain in a filthy state. Poland-street is a *cul de sac*. Smallpox, resulting in death, has taken place in the street, and a woman had died in the immediate neighbourhood that morning. The defendant had been served with a notice, and the other owners of property there had been willing to remove the offensive drain, but they could not get the defendant to assist. The defendant also had lately made himself liable to severe penalties by letting a house to a tenant who suffered twelve or fourteen persons to live together in one small room, and no less than three deaths occurred from that overcrowding. The magistrates ordered the privy to be cleaned out within twenty-four hours, and the nuisance from the drain to be remedied in seven days.

The Cawnpore Memorial.—The consecration of the monument erected over the well at Cawnpore, into which were cast the remains of those massacred there on the 15th of July, 1857, took place on the 11th of February last. Not one of the thousands of natives who crowded to witness the scene was admitted within the enclosure. Lord Elgin stood on the steps of the platform erected round the well. The monument consists of an octagonal Gothic screen, designed by Colonel Yule when Public Works Secretary, on a platform which encircles the well. The well itself within is vaulted over, and covered with a pedestal, which awaits the statue Lord Canning promised to order from Baron Marochetti. Round the rim of the well, and within the screen, is written—"Sacred to the perpetual memory of a great company of Christian people, chiefly women and children, who, near this spot, were cruelly massacred by the followers of the rebel Nana Dhoondopunt, of Bithoor; and cast,—the dying with the dead,—into the well below, on the 15th day of July, 1857." The Bishop, his chaplain, the Archdeacon, the chaplain of Cawnpore, and others, followed by the Viceroy and all the Christians present, went in procession round the grounds, chanting the service of consecration. Mr. Thornhill, commissioner of Allahabad, whose brother's bones lay below, was the architect, who superintended the raising of the monument and the laying out of the grounds.

The Royal Academy.—The statement which has been extensively circulated, to the effect that the Academicians had given up the right hitherto possessed by them of each hanging eight pictures, and that the number is now reduced to four, is incorrect. Some such arrangement, we are informed, has been come to with reference to portrait painters who are members of the Academy, but not to the general body, yet.

Copper.—In manufactured, says the *Cornish Telegraph*, nothing under fixed rates can be obtained, demand moderate. For raw there is rather more inquiry, some of the smelters still refusing orders at market prices. Foreign copper is quiet, quotations being comparatively in excess of English: buyers are not attracted to any extent. Burra Burra, 94*l.* 10s. to 95*l.*; Kapunda, 95*l.*; Spanish, 87*l.* to 88*l.*; Chili, 83*l.*

Proposed Guild of Art-Workmen, at Hanley, Staffordshire.—A numerous meeting of art-workmen has been held at the Mechanics' Institution, Hanley, at which Mr. Henry Sherwin, of Wolstanton, presided. Stoke and Burslem were represented as well as Hanley. The circular calling the meeting stated the object to be the establisment of a guild or association of art-workmen and others for mutual aid in promoting a knowledge of the principles of art in their application to pottery. It was resolved unanimously to establish such a society: it will meet fortnightly.

The Toronto Mechanics' Institute.—The secretary of the Toronto Mechanics' Institute writes a letter in the *Hants Independent*, stating that the institution has cost 10,000*l.*; that it has a library of 6,000 volumes, and a reading-room supplied with 100 newspapers and periodicals; and that the members number 1,000. Many of them attend classes for instruction in book-keeping, penmanship, English grammar and composition, mathematics, architectural and mechanical drawing, music, French, and ornamental drawing. The writer concludes by saying:—"Canada is a great country, and a good home for the industrious. I am sure that the starving thousands in England might make here a comfortable living."

A large Vat.—There has lately been finished, at the vinegar works of Messrs. Hill, Evans, & Co., in Worcester, a monster vat, which stands on a 2-feet dwarf wall of nine bricks in thickness: its height is 23 feet: it is 102 feet in circumference, 23 feet in diameter, and in its construction 325 staves of Dantzic deal, each 3 inches thick, have been used. The staves are bound by twenty-three hoops of Staffordshire iron, 3½ inches wide and three-eighths of an inch in thickness, and the vat will hold 114,643 gallons, or 3,184½ barrels. The largest known vat next to this is said to be at the porter brewery of Messrs. Guinness, at Dublin, which holds about 80,000 gallons, so that the Worcester vat exceeds it by upwards of 35,000 gallons. The total weight of this mammoth, when full, is 570 tons. If circular tables were placed inside it while empty, 100 persons might conveniently dine round them, and a tolerably numerous school might assemble to tea within its walls. Standing near to it are two other vats, holding upwards of 80,000 gallons each; and there are others of 70,000, 50,000, and so on down to 1,700, and making altogether 76. These monster vats have been built by Mr. James Oxley, of Frome, Somerset.

Royal General Theatrical Fund.—The eighteenth anniversary festival of this institution was celebrated on Saturday evening last at the Freemasons' Tavern, Great Queen-street, under the presidency of Mr. Charles Dickens. More than 200 persons sat down to dinner in the great hall. A numerous party of ladies honoured the entertainment with their presence, and were accommodated with seats at the top of the hall, and also in the gallery. Mr. Buckstone, in his address, made allusion to the usual position of ladies in such entertainments:—"Gentlemen," he said, "seeing the ladies still seated by themselves, and cruelly parted from our sides, I must tell you it is yet an undecided point whether in future they shall not sit down and dine with us. But as I have promised to be chairman next Ash-Wednesday, at another Dramatic Fund Dinner, where ladies do sit down, I shall have an opportunity of observing how the system works; and if I find it very comfortable, as I am certain I shall, I intend to recommend the directors of our fund to do the same thing; and then you can bring your wives and sweethearts; and, by your liberal donations, prove to them what noble and generous hearts you have to bestow upon them." The subscriptions announced by Mr. Cullenford, the secretary, amounted to nearly 400*l.*; her Majesty's donation being 100*l.*

MONUMENTAL.—Mr. Thomas Earle has just completed a colossal seated statue of the Queen for the People's Park, Hull; and another colossal statue (the figure in this case standing) of the late Prince Consort, to be placed before the Licensed Victuallers' Asylum, of which his Royal Highness was patron.——A fund is now being raised towards erecting a monument in Canterbury Cathedral to the memory of Archbishop Sumner.

DIAMAGNETISM AS A RESUSCITATIVE.—A contemporary says,—"Mr. Faraday has discovered that suffocated persons may be revived by passing a form of magnetism, known by his name, into what surgeons will understand as the phrenic nerve. The French physiologists have tried it on scores of cats and dogs suffocated, and call it, in compliment to England, the 'Faradisatian' plan."

NEW CHURCHYARDS.—A return has been compiled which shows that, in the last thirty years, new ground has been consecrated in 2,688 parishes of England and Wales to serve as churchyards. In 1,412 parishes, very nearly half the whole number, the ground was presented as a free gift, and in 229 it was purchased by voluntary subscription. Like most of the occasional returns made to Parliament, this is by no means complete or correct. No information has been received from the dioceses of Exeter and Lincoln, and a difference of opinion seems to have prevailed in reference to including cemeteries not belonging to any particular church.

"STEAM SUPERSEDED:" GUNPOWDER AS A SUBSTITUTE.—An invention has been provisionally specified by Mr. John Macintosh, of North Bank, Regent's Park. It consists in the rapid generation of power by the aid of oxygenous "fuel" in tubes, or inside the usual boiler, and composed either of coke or coal, and nitrate of potash, with, in some cases, sulphur and chloride of potash; and, if desired, the "fuel" is put into form with adhesive substances, such as mineral or vegetable pitch, resin, paraffine, gutta-percha, caoutchouc, or glue. The prepared fuel is put into closed tubes or furnaces, with valves for the escape of the gaseous products of the combustion, which may be used alone or in combination with steam, air, or other fluids, in giving motion to machinery. This oxygenous "fuel" may be put into ordinary steam-boilers; and when ignited, it instantly produces power to give motion to engines, or it may be used for other purposes where power is required as an auxiliary. How will it act on the metal of the tubes and boilers?

EUROPEAN VANDALS IN EGYPT.—Writing from Egypt, Mr. A. H. Rhind says:—M. Mariette complains, and justly, that the Vandalism of European travellers is as rampant as ever. The evidence of this is to be seen on all sides in the chippings and scratches and chiselled names which deface the monuments everywhere. I may mention, however, three special instances from among those related to me by M. Mariette, as having occurred since he entered upon his office, and they will illustrate what has been done by some visitors of the three nations from which come the greater number of travellers in this country. Let the first be an Englishman. He went up the Nile with a brush and a pot of coal-tar and wrote himself down all over the monuments in letters a foot long. [Cannot Mr. Rhind send us his name?] Take another case of two Americans. An attempt had been made by M. Mariette to secure the future safety of the celebrated Royal Tomb known as Belzoni's, which, notwithstanding the scientific mutilations of Dr. Lepsius and other accidents, is still a splendid relic. A door was made for it and a keeper appointed. But one morning these American travellers appeared at the spot, and not finding the keeper there, as he had not been warned, they beat down the door, burned part of it to boil their coffee, and thrashed the keeper when he arrived. At Edfoo, two Frenchmen showed similar or more aggravated contempt for the efforts at conservation. After the very perfect temple there was cleared out, a keeper was likewise appointed for it; and when he, on the French visitors beginning to possess themselves of a fragment, remonstrated with them, stating his orders on the subject, they simply abused him and his superiors, and proceeded to chip off and pocket the pieces they coveted. It might produce some effect if, in your own and other influential journals, it were prominently stated, that the Egyptian monuments are cared for; that foreigners are now practically their only defacers; and that it is as foolish and unjustifiable to break off fragments or cut names on them, as it would be to attempt to do the same in the Pantheon at Rome or in Westminster Abbey.

ARCHITECTURE AND SCIENCE.—Cardinal Wiseman, in his lecture "On Points of Contact between Science and Art," illustrated his argument by a matter relating to architecture which occurred in the history of St. Peter's at Rome. "Although," said the cardinal, "the architect, Michelangelo, had taken the greatest precaution for the security of the dome, yet in 1681 numerous cracks appeared in various directions through the cupola. Marble dovetails placed across the crack broke with alarming rapidity, and it was feared that in a few years the whole dome might fall in. Various remedies were suggested by architects; but the Pope Benedict the Fourteenth wisely observed that this was not the business of art, but that of science. A commission of three eminent mathematicians (Boscovich, Le Sueur, and Jacquier) was appointed to examine the case. In 1742 they issued their report, showing by their calculations, that the weight of the entire dome with its lantern came to 55,248 tons, and that there was a balance of 1,674 tons on the side of pressure against support; concluding with the remark, 'that irreparable ruin must be apprehended unless a timely and efficient remedy was applied.' The remedy they proposed was entirely scientific—to put six more solid iron girders round the huge periphery of 420 feet. No time was lost. In 1743 two girders were braced round the drum, and in 1744 three more were added. We have here a notable instance of Science coming to the rescue of Art in one of its most painful crises. The proposed cure fully answered; and now, after 120 years, no sign has been given of subsequent damage." Architecture, we must take the liberty of reminding the learned cardinal, is a science as well as an art, and its professors, to be entitled to be so called, must be themselves competent to construct edifices that will not fall, and to prescribe efficient remedies for those that seem disposed to do so. We do not look very patiently on the attempts which are being made in more quarters than one to represent the architect simply as the designer of pretty forms.

TENDERS.

For a warehouse, John-street, Crutched-friars, for Mr. W. T. Mackrell. Mr. John Whichcord, architect:—

Kirk	£3,349 0 0
Brown & Robinson	3,185 0 0

The "*Art Journal*" of November, in its description of Benson's Great Clock, says: "It has attracted universal attention; its construction has, we believe, obtained general and strong approval; it is one of the largest chiming clocks as yet manufactured in this country." Benson's new showrooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bedroom, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's illustrated pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world to select a clock. J. W. Benson received a Prize Medal and honourable mention. 33 and 34, Ludgate Hill. Established 1749.—[Advt.]

DISTRICT SURVEYOR WANTED, for the Stockport and Hyde Divisions of the Hundred of Macclesfield.—The Highway Board are prepared to receive applications from Candidates for the Office of DISTRICT SURVEYOR. Persons applying must be practically acquainted with the management and repair of highways; and preference will be given to candidates who have served as, or under, professional surveyors of highways. The district consists of twenty five townships or places, containing about — miles of highways. Applicants are requested to state the amount of salary they will expect, including travelling and all other expenses. Security will be required. The surveyor will have to devote the whole of his time to the performance of his duties, and to reside within the district. Applications and testimonials to be sent to Mr. JOHN LINGARD VAUGHAN, Clerk to the Board, at his Office, in Stockport, on or before the 1st of MAY next. Applications to be marked outside, "District Surveyorship."

JOHN LINGARD VAUGHAN,
Clerk to the said Highway Board.

Stockport, April 2nd, 1863.

OFFICE LAD WANTED.—Apply at Mr. WINDER'S Office, 18, Abingdon-street, Westminster, on FRIDAY next, between the hours of TEN and TWELVE o'clock a.m.

AN ENGINEER is WANTED for India (term, five years), to erect, work, and manage steam-engines with heavy machinery. If acquainted with building it might be to his advantage. State age, last employment, references, salary expected, and whether single or married.—Address, post paid to A. P. CO. care of Hopkins's Private Hotel, 13, Euston-road, N.W.

TO SURVEYORS.

AN ASSISTANT WANTED, who thoroughly understands the practical construction of buildings. Statement of qualifications and terms to be addressed to N. Bessborough Library Reclamation-street, Pimlico.

SIR JOHN CASS'S CHARITY.—SURVEYORSHIP.—The Trustees are prepared to receive APPLICATIONS from Gentlemen desirous of filling the office of SURVEYOR to this Charity, which will become vacant on the 24th day of June next. Applications and testimonials are to be forwarded to me, the undersigned, on or before the 13th inst. after which day the Board will meet to nominate for election a certain number of candidates deemed most eligible for the office. The election will take place at the School-house, Church-row, Aldgate, on TUESDAY, the 21st inst. at ELEVEN o'clock, at which time and place the candidates so nominated will receive notice to attend. Every information respecting the duties and emoluments of the office will be offered to any candidate on application to me. The successful candidate will be required to reside on the Charity Estate at Hackney.—RANDALL GLYNES, Registrar, 8, Crescent, America-square, Minories.

Dated April 4th, 1863.

TO ROAD SURVEYORS and OTHERS.—The Waywardens of the Wantage Highway District will, at their meeting, to be held at the Town hall, Wantage, on SATURDAY, the 18th day of APRIL, 1863, receive APPLICATIONS from persons wishing to be ELECTED to the Office of SURVEYOR for the Wantage Highway District, which comprises fourteen parishes, and between sixty and seventy miles of highway. The yearly salary will be 120*l*., and the person appointed will be required to devote his whole time to the duties of his appointment.—Applications and testimonials to be forwarded to my Office, at Wantage, on or before TEN o'clock, on the morning of the 18th day of APRIL.

EDWARD ORMOND, Clerk.

2nd April, 1863.

TO PAINTERS, &c.

ed of the Resident Manager, at the Works.

BY MAJESTY'S ROYAL LET.-LES PATENT
EBSTER'S SLATE DRILL BORING
MACHINE.
Patentee, in introducing this Machine to the notice of Con-
rs, Slate Merchants, Quarry Owners, and Proprietors, has every
ence in recommending it as being an undoubted improvement
the old fashioned, slow and expensive mode of Boring or
ing Horse slates. Though admirably adapted for its purpose,
achine is yet so simple that a boy may work it; it is so strong
o thoroughly need be without one, and so economical that, by
ing its breakage alone, its cost will be repaid in a few weeks.
dvantages and capabilities of the Machine may be stated as
ws:—
It will bore with ease the hardest slate.
The holes are drilled at once with sufficient countersink for
ads of the nails.
It economizes time, reduces labour, and saves expense, as one
y the Machine can accomplish the work of four by the knife
k.
There is no breakage.
The full strength of the slate is preserved; the drill not
g any splinter as is done by the pick.
FFICE AGENTS are being appointed for England and Wales,
ose Master and Sub-Agents parties will learn more by being
ng to the Patentee, ALEXANDER WEBSTER, Engineer,
ath, N.B.; or to his Agent, Mr. D. F. DRUMMOND, Ironmonger,
ath. Satisfactory references will be required.
Numerous testimonials have been received, and can be had
on application.

PATENT WORCESTER PRIZE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and has just been awarded for its marvellous ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and as a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of a large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole Leaves only ONE SMALL FIRE. One 3 feet wide is equal to an ordinary Range 6 feet wide.

Extracted from the "London Daily Telegraph," May 15th, 1862

"INTERNATIONAL EXHIBITION, Class 31

"One of the most recent inventions it should be said that Messrs. JONES & ROWE's Patent Worcestershire Range, also stands forward for special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER so that the latter is not affected by, and the ROASTER is constantly replenished with fresh air."

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations. This valuable FREEHOLD ESTATE (the Tax redeemed), surrounding the Philbroke, a healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made and sewers in the estate, is now OFFERED TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for the Estate to be sold in Lots. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

WOODFORD RAILWAY.—The GROVE, WANSTEAD—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Good gravel, situation healthy, and water excellent. The Station is 10 minutes' walk from the Estate, and the City a rapid run of twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston, Roman Road, Bow, Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land before deemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for terms of 10 years.—For plans, &c., apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

TO BUILDERS, &c.—A PLOT of FREEHOLD BUILDING LAND for SALE, near the New Church, Cathenham Park, Wimbledon; also a PLOT, adjoining the Dunsford Villas, fronting the Merton road, Wimbledon, Surrey, containing nearly one acre each. For plans, &c., apply to Mr. W. C. POOLE, 11, Great Smith street, Westminster, S.W.

TO BUILDERS and OTHERS.—TO BE LET, several PLOTS of BUILDING LAND, situate in the best part of Stoke Newington, where there is a great demand. Brick supplied on the estate at a low price. Sand may be raised on the ground for building purposes.—Apply to Mr RODDA, at the Estate Office, Bouverie-road, Church street, Stoke Newington.

HENLEY-ON-THAMES.—BUILDING GROUND on the Banks of the Thames TO BE LET, on Building Leases, THREE PLOTS of GROUND, situate, duly shown on the new road by the river side, leading from Henley to the Great Western Railway Station. Two of the Plots have a frontage to the river of 117 feet and a depth of about 110 feet, and the other a front age of 52 feet and a depth of 96 feet. The land is most beautifully situate, and commands an extensive view of Park Place and the River, offering great advantages for building Residences suitable for the neighbourhood.—Full particulars may be had of Messrs. COOPER, Solicitors, Henley-on-Thames; and Messrs. HEWS & SON, Estate Agents, Henley-on-Thames.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

HIGH STREET, BOROUGH.—The LONG LEASE of a large HOUSE in the Borough, with a BUILDING SITE for warehouses or workshops in rear, TO BE SOLD. It is a free licensed public house, but the lease would be sold for any suitable business. Apply at the Estate Office, 21, Walbrook.

IMPORTANT SALE.—HENLEY-UPON-THAMES, Oxfordshire.—TO BE SOLD by PRIVATE CONTRACT, the valuable and beautiful ESTATE known as BADGMORE FARM, in the parish of Henley-upon-Thames. The Estate comprises 180 acres of very excellent Arable and Grass Land, and 21 acres of valuable Wood Land. If no acceptable offer is made for the entire property, the Proprietor will not object to divide it into four Lots, in which case—

Lot 1.—Would comprise a substantial brick-built Residence, with excellent farm buildings, and nine meadows of arable and grass land, containing together about 106 acres.

Lot 2.—Three valuable pieces of arable Land, containing together about 27 acres. Part of these lands have a frontage to the road leading from Henley to Greys, and adjoin the Park of Badgmore House.

Lot 3.—Two excellent pieces of arable Land, containing about 30 acres, and very valuable Wood Land containing about 17 acres.

Lot 4.—Two pieces of arable Land containing about 10 acres.

This Property, which lies on a beautiful slope near the town of Henley, overlooking the Fawley Court Estate, is admirably suited for the site of a mansion, the greater part of it being easily convertible into park ground; or, if divided, it presents many desirable sites for villas, to all which there are excellent roads. Lots 1 and 4 extend down to and have frontages the whole length of the Fair Mile; and the greater part of the Estate lies within a mile of the Henley Railway Station.—For further particulars and to treat for the same, apply to Messrs. COOPER, Solicitors, Henley-upon-Thames, at whose office a plan of the Property may be seen.

NEAR to LONDON BRIDGE and KING WILLIAM STREET.—TO BE LET, for 63 years, a valuable SITE for OFFICES. The ground has at present a building upon it, but is excellent.—Apply to Mr KNIGHTLEY, Architect, 25, Cannon-street, City.

BUILDING LAND TO BE LET.—Saville-row, Walworth, Surrey, within five minutes' walk of the Elephant and Castle, contiguous to the Chatham and Dover Railway Station, and within the high road leading from London to Camberwell.—The Parishioners' Committee are prepared to receive PROPOSALS for the whole or any part of their ESTATE now between Saville-road and Gloucester-row, the same having been laid out in streets and frontages for the erection of dwelling houses, shops, or other buildings, on a BUILDING LEASE, or Leases for Eighty Years, land to be redeemed. The streets are formed, the roads and sewers made, footpaths laid and drained, so that the estate is now ready for immediate building operations.—For particulars inquire of Mr. W. B. TOWSE, the Clerk of the Company, Fishmongers' Hall, London bridge; and at the Office of Mr. RICHARD SUTER, Architect and Surveyor, 28, Fenchurch-street, where plans and conditions may be seen.

BUILDING LAND TO BE LET.
HACKNEY, close to the Railway Station, for small Dwelling Houses.
NORWOOD, close to the Crystal Palace, for Shops and Villas.
PERRY-HILL, SYDENHAM, for Shops. Advances in each case if required.—Apply to Mr. T. K. GREEN, 25, College hill, Cannon-street, E.C.

FREEHOLD SITES for BUILDING, and FREEHOLD HOUSES, can be obtained in the best part of Prince Albert-road, near Kensington Gore, in front of the Royal Horticultural Gardens.—Apply to C. J. RICHARDSON, Architect, 47, Prince Albert-road, N.W.

TO BE LET, a Capital WHARF and DRAWDOCK, known as "Searle's Wharf," most slightly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.
This Drawdock has been closed for some years, and is now about to be re-opened.
From its excellent situation, and the probability of the Scotland Yard Wharfs being soon at an early date by the Thames Embankment, a very valuable business may no doubt be depended upon.
A Residence is attached, which may or may not be taken with the Wharf or Drawdock.
Apply to Mr. W. HEWETT, 84, York road, Lambeth.

FREEHOLD BUILDING LAND at Ealing, Middlesex.—TO BE SOLD or LET, on Building Lease, 100 years, a small PIECE of BUILDING LAND. Frontage 55 feet, depth about 130 feet.—Apply to the Owner, Mr. RODGERS, 59, St. Martin's-lane, Charing-cross, London. Advances if required.

VILLA COTTAGE TO LET, Rent 15*l.* in the pretty Suburban Village of Walthamstow, Essex, within seven minutes' walk of the Lea Bridge Railway Station. Five rooms, commanding open and views, with garden back and front, and yard enclosed. For cards to view apply to Mr. W. YOUNG, Millfield-lane, Highgate, London, N.

TO CONTRACTORS, BUILDERS, and BRICKMAKERS, near to Mordon, Old Malden, and Worcester Park, and South Railway station.—TO BE LET, about EIGHTY ACRES of very superior BRICK-EARTH LAND, which may be worked (without brick-making plant) at a moderate royalty. Specimens of various strata can be returned from the clay may be inspected, and further information obtained, at the Office of Messrs. WIGG, SON, & OLIVER, No 7, Bedford-row, W.C.

FREEHOLD SITES at Poplar and Bromley, suitable for Factory Premises or Stabling. TO BE LET or SOLD; also FREEHOLD RESIDENCES in Grove-road, Bow, near the principal entrance to the Park. The houses contain ten rooms each, are well built and drained, and are close to direct omnibus route to the City.—Apply to JOHNSON & ARROWSMITH, Architects, 29, Great St. Helen's, E.C.

HARROW.—To BUILDERS and Others. TO BE LET, on Building Leases, for 99 years, several Plots of FREEHOLD LAND, having frontage to main road, and a depth of 80 feet. Houses erected of the value of 500 per annum and upwards. Plots of 100 feet square, close to the Harrow and London Railway station.—Apply to Messrs. WHITE & DRUCE, Auctioneers, 1, Brooke street, Grosvenor square, W.

TO ARCHITECTS and SURVEYORS.—The Advertiser, having a valuable ESTATE well adapted for BUILDING PURPOSES, will place the business, which will be considerable) in the hands of a Gentleman who can introduce respectable Builders.—Address, Z. Y. 15, Charing cross. Advances can be made.

TO BUILDERS and OTHERS.—Valuable BUILDING LAND TO BE LET, at Putney, on the main road, near the Railway Station. Term, 99 years; enclosed gravel. Advances will be made to respectable parties.—For plans and particulars apply to J. H. ROWLEY, Esq. Architect, 17, St. Helen's-place, E.C.

HYTHE, near FOLKESTONE.—TO BE LET, upon advantageous terms, the SEA FRONTAGE between the Marine Towers of this delightful watering place, upon Building Leases, and for the whole or there is a choice site for an hotel, which is much required.—For particulars, apply to W. F. DANGERFIELD, Esq. Hythe, or Ashford, Kent.

TO NEW HOTEL COMPANIES and OTHERS.—WANTED, for a Club of twenty years' standing, ACCOMMODATION in a large Hotel, to consist of dining, reading, and secretaries' rooms, with the use of a certain number of bedrooms, &c.—Address, by letter only, H. H. at C. H. May's Advertisement Offices, 29, Clement's-lane, Lombard street, E.C.

1851.

TERRA-COTTA WORKS,
BLACKFRIARS ROAD,
LONDON, S.

MARK H. BLANCHARD&CO.

Successors to COADES.

1862.

Original Works established 1769. Terra-Cotta Manufacturers to her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Department of Science and Art, South Kensington, and the Recipient of the Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

A beautiful variety of Statues, Statuettes, Vases, Tazze, Fountains, Flower Pots, Balustrade Terminals, and other adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet street, City. Sand from above or below Bridge, delivered by the yard or per barge. INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

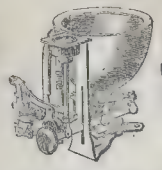
Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. heretofore under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such materials. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.



CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

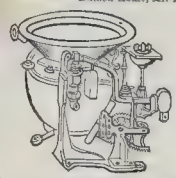
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

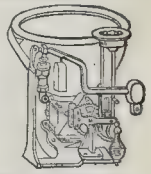
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.



Pan.

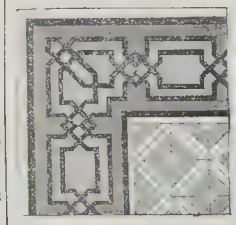


The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No intern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

GUEST & CHRIMES, FOUNDRY and

GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS REGGS.



ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High-pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Pull Water-Closet; Patent Anti-Lode Water Waste Preventer; Plumbers' and Gas-fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

SALES BY AUCTION.

BRENTFORD GRAIN DISTILLERY.—TO BUILDERS AND OTHERS

MESSRS. FULLER & HORSEY will SELL by AUCTION, pursuant to an Order of the Court of Chancery, made in the cases of "Booth v. Coulton," "Brother Booth, and "Booth v. Nash," with the approbation of the Right Hon. Vice-Chancellor Kindersley, the Judge to whom those causes are attached, at the AUCTION MART, in the city of London, on THURSDAY, the 28th day of MAY, 1863, at TWELVE o'clock, in Four Lots, the highly important FREEHOLD and COPYHOLD ESTATE, late carried on as the Brentford Grain Distillery; comprising the maltings, the back room, the brew-house, the mill, dwelling-house, offices, yards, garden, and stabling, and a landing wharf on the Thames, situate at Brentford, about seven miles from London, on the western road, and about midway between the Kew and Brentford stations of the South Western Railway. It is contiguous to the Kew station of the North London Railway, and also to the docks and wharves at Brentford; the whole forming a most desirable property for any large manufacturing establishment, or a most eligible site for building operations.—To be viewed till the Sale by cards only, which, with printed particulars, plans, and conditions, may be had of St. P. B. HOOK, Esq. Solicitor, 9, Lincoln's-inn-fields, W.C.; of W. H. DAVIS, Esq. Solicitor, 10, Golden square; of Messrs. KINGSFORD & DORMAN, Solicitors, Essex-street, Strand; of Messrs. CLARK & RUSTON, Solicitors, Brentford; and of Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

TO CONTRACTORS, BUILDERS, AND OTHERS

MESSRS. FULLER & HORSEY are instructed by Messrs. Kolk & Lucas to SELL by AUCTION, on TUESDAY, APRIL 21, 1863, and following day, at TWELVE o'clock each day, at the PREMISES, Grosvenor road, Thames Bank, Pimlico, adjoining the Railway Bridge and Grosvenor Canal, the CONCLUDING PORTION of the SURPLUS MATERIALS NOT used in the reconstruction of the International Exhibition building; including 100 logs capital Baltic timber, 40 loads sweet timber, 5 loads half-balked timber, 600 sets of 11 joists, two and three feet long, 10 fathoms brewers' costly hydraulic girder-proving machine, 10 tons contractors' rails, 12 iron turntables, 2 Pooley's weighing machines, pile engines and masks, 20 navvies' barrows, contractors' crabs and other gearing, capital iron timber saw frame, one batten frame, 21 four-wheel trollies, carpenters' benches and stools, screw jacks, sash weights, paints, oils, sash cords, ropefalls and slings, chain blocks and falls; also 50 contractors' earth waggons, side and end tip.—To be viewed the day previous to the Sale, when catalogues may be had on the Premises; and of Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

Valuable Collection of Engineer's Tools, partly from the International Exhibition

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, APRIL 28th, at TWELVE, at the WAREHOUSES, Belvedere-road, Lambeth, removed for convenience of sale, a costly collection of ENGINEER'S TOOLS, principally manufactured by the eminent firm of Fox, Brothers, Derby, the whole of them highly finished, of the best materials and workmanship, and a portion exhibited at the International Exhibition, where they received honorable mention for general excellence; including two self-acting planing-machines, will take in a feet 6 inches wide and 4 feet high, with two tool-holders to each; three smaller planing-machines, to plane 1 foot 10 inches wide and 1 foot 8 inches high; three self-acting vertical drilling-machines, to bore from 12 to 2 inches diameter, and will take in work 32 inches diameter; a nut-shaping machine, with universal motion; one 18-inch self-acting and screw-cutting lathe, 18 feet bed, with break; one 16-inch self-acting slide lathe, with 18 feet bed; one self-acting, surfacing, and screw-cutting lathe, will take in a surface 5 feet diameter, and will cut screws up to 2 inches pitch; one 9-inch centre screw-cutting lathe, with 9 feet bed; two 9-inch centre self-acting slide lathes, with 9 feet beds; two back geared 7 inch lathes, with 4 feet beds, and tools; one highly finished 6 inch foot lathe, with 6 feet 6 inches bed; new engine worksmall size, engine and boiler; 4 tons Crowley and Millington's cast and shear steel; 20 chests, steel, tools, gauges, blocks and falls, steel tackle, hooks, bolts and nuts, spanners, two strong wheelbarrows, iron cranes, scales and weights, slotting and wheels, a new self-acting tee-cutting machine, by Mr. Nasmyth, two patents, and numerous other effects.—To be viewed on Monday previous to the sale. Catalogues may be had of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

IN CHANCERY.—Baines *v.* Baines.—Mottingham, near Eltham, Kent, two miles from the Blackheath Station on the North Kent Railway, and a short distance only from the proposed station on the Dartford line, now in course of formation.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions (pursuant to an order of the Court of Chancery made in the above-mentioned cause) to SELL by AUCTION, at the MART, near the Bank of England, on TUESDAY, 5th day of MAY, at TWELVE o'clock, in one or more lots, a most valuable FREEHOLD ESTATE, consisting of nearly twenty-seven acres of beautiful parkike meadow land well timbered, and having a large and substantial Mansion or Lodge which has been lately pulled down, stood upon this property; the excellent kitchen garden still remains. It is adapted for the erection of a mansion or several detached residences, the land rising to the south, and commanding extensive views over a very picturesque country, or for a building scheme, having a frontage on the whole of the east side to the high road from Mottingham to London, and being in a locality which will very shortly be particularly well circumstanced with regard to railway communication, and is a very favourite one for residence. The premises are in a ring fence, and possession may be had, if required, on completion of the purchase.—Particulars may be had at the Mart, E.C.; of Messrs. WALKER & MARTINEAU, 29, King's-road, Gray's Inn, W.C.; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo place, Pall Mall, S.W.

IN CHANCERY.—Baines *v.* Baines.—Esher, Surrey, three-quarters of a mile from the Railway Station

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions pursuant to an Order of the Court of Chancery made in the above-mentioned cause, to SELL by AUCTION, at the MART, near the Bank of England, on TUESDAY, the 5th day of MAY, 1863, at TWELVE o'clock, in lots, the following most valuable FREEHOLD PROPERTIES, admirably situate in the parish of Esher, contiguous to the noble domains of Claremont and Esher place, viz.:—

Lot 1.—A capital Mansion, called Esher Lodge with stabling, farm premises, two cottages in the farm-yard, excellent flower and kitchen gardens, lawn, shrubberies, and 7 acres of very fertile park like pasture land in enclosures adjoining

Lot 2.—A Cottage Residence, at present held by the gardener, adjoining the high road.

Lot 3.—A very valuable Tract of Freehold Meadow Land, park-like, and well timbered, about 20 acres, adjoining turnpike road, and opposite Claremont Park, adapted for the erection of one or more first class residences, or for an extensive Nursery ground

Lot 4.—Two well-built Residences, in the occupation of Mr. Davey and Mr. Edwin Smith

Lot 5.—Three Fields, held by Smithers, Derby, and Triggs.

Lot 6.—Three Cottages, adjoining the premises of the Bear Inn, held by Foster, Hedger, and Weller

Lot 7.—A Piece of Land, used as a drying-ground, at the rear of Lot 4

Lot 8.—A well built and well situated Residence in the village, occupied by the Rector.

Lot 9.—Littleworth Farm, with house and premises, and 35a. 2r. 12p. of capital freehold land.

Particulars with plans may be obtained at the Auction Mart; at the Bear Inn, Esher; of Messrs WALKER & MARTINEAU, 13, King's-road, Gray's Inn, W.C.; and of Messrs. D. SMITH, SON, & OAKLEY, Land Agents and Surveyors, 1, Waterloo-place, Pall mall, S.W.

DEPTFORD.—TO BUILDERS AND OTHERS.—TO BE SOLD BY AUCTION, BY

MR. PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, on FRIDAY, APRIL 17, at TWELVE, all the Excellent BUILDING MATERIALS of a large Factory, Workshops, Stabling, and Five Modern-built Houses adjoining, in Southwark Bridge-road; comprising a large quantity of excellent brickwork, tiling and slating, useful timber in roofs and floors, modern sashes, doors, skylights, marble chimneypieces, Portland stone paving, folding doors, fittings-up, counter and shop fronts, several tons of lead in gutters and pipes, cisterns, stoves, ranges, and useful fixtures and fittings up.—May be viewed the day previous. Catalogues had of ROBERT W. SHAW, Esq. Architect, Crooked-lane Chambers, Cannon-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, City, and 40, Parliament-street, Westminster.

VALUABLE LEASE, GOODWILL OF THE BUSINESS, AND STOCK-IN-TRADE OF A BUILDER.

MR. BRAY, Jun., is instructed to SELL by AUCTION, on the PREMISES, on WEDNESDAY, APRIL 22nd, at TWELVE o'clock, the valuable LEASE of the above BUSINESS PREMISES, in which the trade of a builder has been carried on successfully for upwards of fifty years. The premises are in every respect adapted for doing a good trade, and are held for a term of about eighteen years, at 61*l.* per annum. And the Stock in Trade, comprising yellow and stock bricks and planks, oak planks, posts, and rails, wainscot and mahogany, prepared doors, sashes, mouldings, doors, sashes, frames, brick, tiles, stone, cement, carpenters' benches, mortice pipes, ironmongery, &c.—Particulars and catalogues may be had on the Premises; of Messrs. PALMER, NETTLESHIP, & ELAND, Solicitors, 4, Trafalgar-square, Charing-cross; of Messrs. HOWDEN & HEATH, 6, Bedford-street-buildings, E.C.; and at the Offices of the Auctioneer, 16A, King's-road, Bedford-row, W.C.

HORNSEY, near to the Wood-green Railway Station.—The last Portion of the valuable FREEHOLD BUILDING GROUND, presenting a good opportunity for investment of capital in creating Freehold Ground Rents.

MR. BRAY, Jun., is favoured with instructions to SELL by AUCTION, at the MART, on THURSDAY, the 23rd day of MAY, at TWELVE o'clock, in all Lots, a Valuable ESTATE, being part of the "Lordship Lodge Estate," in Lordship-lane, one mile and a half to the Wood-green Railway Station, having 1,000 feet of building frontage to Acacia road Wakefield-road, and Lordship-lane, and presenting sites in this highly favoured locality for the erection of detached or semi-detached villas. The roads and sewers have been made at a considerable expense.—Particulars and conditions of sale may be had of Messrs. ROY & CARTWRIGHT, Solicitors, 4, Lothbury, E.C.; of Messrs. FORD & LLOYD, Solicitors, 4, Bloomsbury-square, W.C.; of JOSEPH IVIMEY, Esq. Solicitor, 8, Staples-inn, W.C.; at the Nag's Head and Jolly Butchers, Wood-green; the Ship, Tottenham; the Angel, Edmonton; and at the Offices of the Auctioneer, 16A, King's-road, Bedford-row, W.C.

BRADFORD-ON-AVON, WILTSHIRE.

MR. GRAHAM FOLEY will SELL by AUCTION, at the SWAN HOTEL, Bradford-on-Avon, on WEDNESDAY, the 22nd day of APRIL, 1863, at SIX o'clock in the evening, all that capital BUILDING SITE of the late Greenland Woollen Manufactory; also the two workmen's cottages, valuable land and garden, two water-wheels, shafting, &c.; capital 10-horse power steam engine, with the steam boiler and appointments thereto belonging.—N.B. The purchaser will be required to take the timber, steam engine, boiler, water wheels, shafting, and other fixtures, at a sum to be named at the time of sale. The Auctioneer begs to direct attention to the valuable building site (which is approached by a noble avenue of young thriving elms), and from its excellent situation on that noble stream, the River Avon, and its valuable and never failing supply; also the two workmen's cottages, offers a fine opportunity for the building of a Woollen Cloth, Silk, Paper, or Corn Mill, that only very rarely can be obtained.—For further particulars, apply to the Auctioneer, at his Offices, The Parade, Melksham bridge; or to GEORGE SPACKMAN, Esq. Town-hall, Bradford-on-Avon.

OAK, ELM, ASH, and LARCH TIMBER, at Gestingthorpe, in the county of Essex, comprising about 1,040 Trees, a considerable portion of large size and age.

MESSRS. DRIVER have received instructions to OFFER for SALE by PUBLIC AUCTION, at the Red and Swan Hotel, Sudbury, on FRIDAY, the 17th day of APRIL, at ELEVEN for TWELVE o'clock, in 78 lots, a selection of valuable TIMBER consisting of 573 superior oak trees, with their lop, top, and bark, standing in Wiggery, Leys, Ridleys, Hedingham, Stones, and Gages Woods, and in the hedge rows of New House, Moat, Mead, and Hall Farms, contiguous to the village of Gestingthorpe; also 320 elms, most of which are sound, well grown, and of large mettings; and 83 ash, chiefly of good quality, 1,042 pollard oaks, ashes, and elms, in adjacent hedges, together with 60 larch, standing in Tints Grove; and several parcels of faggots and topwood, in suitable lots, on various parts of the Estate.—The Timber is now being felled by Messrs. Mead Bates, Contractor, Builders, and others, and is divided into lots varying from 8 to 21 trees, for the convenience of small purchasers. It is mostly well situate for transit, being near to hard turnpike and other roads, and within four miles of Yeldham Station, and five of Sudbury Station, on branches of the Great Eastern Railway; also within four miles of the River Stour. The Estate on which the Timber is situate is from four to five miles from Sudbury, five miles from Halstead, five miles from Clare, and within sixty miles of the metropolis. The trees requiring to be barked in whole pond, as will be described in the catalogues, and may be viewed on application to Mr. DOWNS, of Gestingthorpe, the local Agent; or to the respective Tenants of the lots. Detailed catalogues be had at the Place of Sale, of J. BAILEY DENTON, Esq. No. 32, Parliament-street; of Mr. DOWNS, Gestingthorpe; at the Compasses Public House, Gestingthorpe; the Bell Inn, Castle Hedingham; at the George, Halstead; at the Moot, Clare; at the Auction Mart, London; and of Messrs. DRIVER, Surveyors, Land Agents, and Auctioneers, 9, Whitehall, London, S.W.

GOVERNMENT CONTRACT CART HORSES, and their Harness.

FOREST HILL.—Extensive PREMISES, close to the Station, now used as an Engineer's, but equally suitable for a Builder, or any Manufacturing purpose

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, APRIL 28th, at TWELVE, the capital FREEHOLD PREMISES, known as the Forest-hill Works, erected on the ground-rent system of substantial Forest-hill. The Premises comprise a dwelling house of five rooms, store-room or office, smith's shop and foundry, with fan-blast forge and furnace, two lofty workshops, each 70 feet by 20 feet, engine house with workshop over, lathe room, and a large yard, with capital frontage. The Premises are now occupied as an engineer's foundry and manufactory, and are admirably adapted for the purpose. They are fitted with plant of the best description, including a six-horse power steam engine, cylinder 8 inches, &c. all by the best makers, modern and in excellent working order, and will be sold with the Lease, or Lot 2 will comprise a plot of Freehold Building Land, adjoining lot 1 and having a frontage of about 46 feet 6 inches to the main road from the station, and a depth of 100 feet, forming an eligible site for a pair of villas.—Particulars of J. HENRY JOHNSON, Esq. Solicitor, 37, Lincoln's-inn-fields; and of the Auctioneers, 80, Cheapside.

OLD ASYLUM, BEDFORD.—EXCELLENT BUILDING MATERIALS.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, close to the town of the Ampthill road, on MONDAY, APRIL 13th, 1863, at TWELVE for ONE o'clock, the HIGHER PORTION of the Excellent BUILDING MATERIALS of the late Bedford County Lunatic Asylum, comprising 400 STOCK BRICKS, a large quantity of YORK paving, coping, and large landing stones, FIRE BRITISH STONE goods, string courses, slates, plates, tools, large slate slabs, stone steps, and blue, white and black marble CHIMNEY PIECES, a large quantity of well-seasoned OAK, consisting of joists, rafters, beams, slating cases, wall plates, purlins, boards, &c., SUPERIOR DOORS AND FRAMES, cupboards, and drawers, sash and other windows, mahogany and oak sashes, about two hemp sash cords, quarries, Bywood &c; two iron girders, palisades, a large cast-iron grating, register and other stoves, lead-safe pan, pulleys, house bells, &c.—May be viewed the day before the sale, and catalogues may be obtained of the Auctioneer, 14, Moorgate street, London, E.C. and of the Foreman on the estate.

[*For remainder of Auctions see p.* ix.

MARYLEBONE and WEST LONDON SCHOOL of ART
The School having been removed from Wells-street to Portland-road, RE OPENED there on WEDNESDAY, APRIL 8th, the present entrance being 73, BOLSOVER STREET.
MASTER.
C. Macdonald Clarke,
Assisted by Teachers from the Training School of Art, South Kensington.
The Government course of instruction is the basis of that pursued in the School, but it is MODIFIED TO MEET THE PRACTICAL WANTS OF STUDENTS: the Committee desiring that this School may afford to Artist Workmen the means of entering, at once, upon the studies bearing most directly upon their several pursuits; avoiding, as far as possible, protracted courses of merely elementary work. There are a few Vacancies for New Students, but immediate application is necessary.
Further information at the School.
C. MACDONALD CLARKE, Hon. Secretary.

COMPETITIONS.

DESIGN for COMPETITION. India Office, 31st March, 1863.
EUROPEAN GENERAL HOSPITAL.
The Bombay Government are prepared to receive DESIGNS for a new EUROPEAN GENERAL HOSPITAL, to be built on the Esplanade, Bombay.
Lithographed copies of the general plan of the accommodation required, with a schedule of measurements according to the arrangements of the building, which have been generally approved by the medical authorities and Government, together with plans of the proposed site, can be had on application at the Office of the Superintending Engineer, Presidency Circle, Bombay, and at the India Office, London.
The rates on which the work is to be calculated will also be furnished at those Offices, and the gross estimate is not to exceed Rupees 3,50,000.
Complete plans and estimates are also required for Residences for the Surgeon and House Surgeon, and for Quarters for Eight Sick Officers, to be arranged in two or three blocks distinct from, but in the immediate vicinity of the main Hospital.
The designs of these buildings should harmonize in character and style with the main building.
The estimate for these, calculated on the same rates, should not exceed 1,25,000 Rupees.
There must be ample provision for through ventilation, which is obtained in Bombay by a sea breeze blowing generally from W. to S.W. during the months from May till September, and from various points from N.W by N. to S.W. by S. during the rest of the year; provision should be made to exclude the N. and E. winds, which blow most frequently by night.
The walls must be protected as far as possible from the direct rays of the sun.
The designs are unrestricted as to style, provided it is suited to the climate and to the use to which the building is to be devoted, and as to materials, provided that they are procurable in Bombay at prices which will admit of their being used in the building as designed.
The designs must include
1. Ground plan and plan of each story.
2. Elevation of each of the four faces.
The plans and elevations to be on a scale of not less than 10 feet to an inch specification and estimate with sections, &c. in sufficient detail to enable the judges to decide whether the plan can be carried out within the sum allowed.
Prizes will be awarded for the two best designs—Rs. 2,500 for the best, and Rs. 1,000 for the next in merit, provided the design fairly fulfils the above conditions.
If the best designs, in an artistic point of view, fail to fulfil any one of the above essential conditions, the judges will be empowered to reduce or withhold the prize; and no prize will be awarded to a design merely because it fulfils the conditions, if otherwise conspicuously deficient in artistic merit.
The drawings and estimates, &c. should be sent in on or before SEPTEMBER 1st, in the usual manner with mottos, and envelopes containing the name and address of the artist, to the Superintending Engineer Presidency Circle, by whom the envelopes will be opened, in presence of the Chief Engineer and Secretary to Government, Public Works Department, after the prizes have been adjudged.
All the designs received will be exhibited in the Town Hall, Bombay, for one month before the adjudication of the prizes; and, unless claimed and removed by the authors, for one month afterwards.
The envelope containing the name should state the author's wish whether the name should be appended to the design when exhibited after the adjudication.
The prizes will be adjudged by the Executive Committee of Fort Improvement Commission and the Engineers of the Great Indian Peninsular and Bombay and Baroda Railways, who will be asked to aid Government in the adjudication.
In the event of any design being finally adopted by Government for execution without further modification than is made by the designer at the instance of Government, the prize will be made up to one per cent on the amount of the estimate as revised by the Executive Committee.
It will be optional to Government to avail themselves of the services of the author in altering or executing any design which gains a prize or premium, any design to which a prize or premium is awarded will remain the absolute property of Government.
Unsuccessful designs will be returned to the authors if claimed by them, or by their authorized agents, within one month from the period of adjudication, during which period, if not claimed, they will remain exhibited in the Town Hall, Bombay.
By order of his Excellency the Governor in Council,
H. RIVERS, Lieut. Colonel, R.E.
Secretary to Government.
Bombay Castle, 12th February, 1863.

TO BUILDERS.—TENDERS will be received for ERECTING ELEVEN SIX-ROOMED HOUSES, in rear of High-street, Southwark. Cash advanced, but security required for due fulfil ment of contract. The owner does not bind himself to accept the lowest or any Tender.—Apply to WM. WALLEN, Esq. Dowgate-hill Chambers, City.

CONTRACTS.

CHEAP CHURCHES, CHAPELS, and SCHOOL CHURCHES.—The Committee for the Church Congress, which will meet in Manchester in October next, are desirous of receiving Communications from Architects and others who have built cheap churches or chapels, with the view of exhibiting at the Congress the elevations (if such as they may approve, together with the statements of the cost, accommodation, &c.—Address the Secretaries of the Church Congress, 2, Essex Chambers, Essex street, Manchester.

KINGSTON-UPON-HULL LOCAL BOARD of HEALTH.—To CONTRACTORS.—The Local Board of Health of Kingston-upon-Hull are prepared to receive TENDERS for the OUTFALL DRAINAGE of the WEST DISTRICT of the Borough of Hull, comprising the construction of upwards of four miles of brick sewers and other works in connexion therewith. Trial shafts have been sunk on the proposed lines of sewers, the results of which may be seen, with the plans of the intended works, on application to Mr. J. FOX SHARP, C.E. Surveyor to the Local Board, at his Office, Sculcoates-hall, Hull, where also copies of the specification, forms of tender, and bills of quantities may be obtained on payment of two guineas (to be returned to parties tendering in accordance with the specification), on and after THURSDAY, the 16th inst. Sealed Tenders, endorsed "West District Drainage," addressed to the Chairman of the Committee of Works, Sculcoates-hall, Hull, must be forwarded on or before THURSDAY, 30th APRIL, 1863. The Board do not bind themselves to accept the lowest or any Tender.—By order,
Hull, April 2nd, 1863. C. S. TODD, Clerk to the Board.

WRITTLE GAS COMPANY, LIMITED.
The Directors of the Writtle Gas Company, Limited, invite TENDERS for the ERECTION of new GAS WORKS, at Writtle, in the county of Essex. Plans and specifications of the same may be seen on application to the Secretary, or at the Office of Mr. JABEZ CHURCH, Civil Engineer, Chelmsford. The work is divided into two contracts. No. 1 contract comprises the builder's work, and No. 2 contract the ironwork, apparatus, and meter. Sealed Tenders for the respective contracts are to be addressed to the Secretary, and delivered at the Company's Offices on or before the 25th day of APRIL, 1863. F. A. JONES, Secretary.
Writtle Gas Company's Office, High street, Chelmsford, March 26, 1863.

TO SCAVENGERS, CONTRACTORS, and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on TUESDAY, the 21st of APRIL, 1863, at TWELVE o'clock at noon precisely, to receive TENDERS for CLEANSING the STREETS, and for Removing Dust, Ashes, &c. from the houses of the Inhabitants; also for Watering certain Streets within the said City, for the term of one year from Midsummer Day next, agreeably to specifications, copies of which may be had at this Office. The City is divided for the purpose of these Contracts into five divisions. Each contractor will be required to enter into bond with two approved sureties in the sum of 500*l.* for each division for cleansing, and 150*l.* for each division for watering, for the due performance of the several Contracts; and the consent, in writing, of the parties proposed as such sureties must be enclosed with the Tenders. The Commissioners do not undertake to accept the lowest Tender in any case, or any, unless deemed satisfactory. No Tender will be received after TWELVE o'clock or the day of treaty, nor will any Tender be received unless it contains inclosed the sum of 20*l.* in Bank of England notes for each division Tendered for, in evidence that the same is made bonâ fide, which sum of money will be returned to each person whose Tender is not accepted, but will be retained in the other cases until the contracts and bonds shall have been duly executed by the parties Tendering and their sureties; and in case of such contracts and bonds not being duly executed, the said sums of money will be retained by and forfeited to the said Commissioners. JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, 4th April, 1863.

STRADBROKE, SUFFOLK.—To BUILDERS.—Persons desirous of CONTRACTING for making considerable ADDITIONS and ALTERATIONS to STRADBROKE VICARAGE, may see the Plans and Specifications at my Offices, Museum street, Ipswich, on and after MONDAY, the 13th instant; and all Tenders are to be sent in, and addressed to the Rev. J. C. RYLE, Stradbroke, on or before SATURDAY, the 25th instant. The Incumbent does not bind himself to accept the lowest Tender.
Ipswich, 9th April, 1863. R. M. PHIPSON, Architect.

TO BUILDERS.—Persons desirous of TENDERING for the erection of the NEW CATHOLIC CHURCH, Stourbridge, Mr. E. WELBY PUGIN, Architect, can see the plans and specifications, and obtain copies of the quantities, by applying to the Rev. WALTER KEEN, Presbytery, Stourbridge, on and after the 21st INSTANT. Tenders to be sent in directed to the Rev. W. KEEN, by the 29th INSTANT. The lowest Tender will not necessarily be accepted.

TO BUILDERS.—The Committee for the Erection of a New Chapel for the Congregation now meeting in Lion-street Chapel, New Kent-road, hereby give Notice, that they are prepared to receive TENDERS for the ERECTION of a CHAPEL, Lecture-room, Vestries, and Class rooms.—Drawings and specification can be seen at the Offices of the Architects, Messrs. SEARLE, SON, & YELF, 4, Bloomsbury-place, W.C. The quantities will be supplied upon the deposit of 1*l.* which will be returned upon the Tenders being opened. The Tenders to be brought to the Vestry of Lion street Chapel on WEDNESDAY, the 29th APRIL, at SIX o'clock in the evening. The Committee do not bind themselves to accept the lowest or any Tender.

TO BUILDERS.—TENDERS are required by Messrs. COURAGE & CO. for the ERECTION of TEN HOUSES near Jamaica Tavern, Bermondsey. Apply to Messrs. SNOOKE & STOCK, Architects, 8, Duke-street, London Bridge, S.E. where plans and specifications may be seen. The Promoters do not bind themselves to accept the lowest or any Tender.
April 15th, 1863.

[*For remainder of Contracts see next Page.*

CONTRACTS.

The drawings, specifications, and bills of quantities may be seen at the Iron Room, Pierpoint street, in Worcester, between the hours of TEN to SIX, from WEDNESDAY, APRIL 22nd, until SATURDAY, MAY 2nd (both inclusive). Copies of the bills of quantities may be had on persons application to the person in charge of the drawings, or by letter addressed to us. Tenders, endorsed "Tender for Chapel," must be addressed to Rev. H. F. STURMER, Chesnut walk, and will not be received later than MAY 2nd

PRICHETT & SON, Architects.

Darlington, April 14, 1863

TO BUILDERS.—TENDERS are required for the RECTION of TWELVE HOUSES, in Devonshire and Stanley Roads, Hackney, for the Temperate Permanent Land and Building Society. The plans may be inspected, and a copy of the specification (price 2s. 6d.) obtained at the Offices of the Society, between the hours of TEN and FOUR o'clock, on and after APRIL 7th up to APRIL 21st. Tenders, on the forms attached to the specifications, are to be left with the Secretary, sealed, and marked on the outside "Tenders for Houses at Hackney," at or before FOUR o'clock on TUESDAY, APRIL 21st. References and security may be required, and the lowest or any Tender will not necessarily be accepted.

HENRY J. PHILLIPS, Secretary.

Offices, 34, Moorgate street, London.

TO CONTRACTORS. — LIVERPOOL CORPORATION WATERWORKS.—The Council of the Borough of Liverpool, desire to receive TENDERS for the CONSTRUCTION of TWO DISTRIBUTING RESERVOIRS, one near Wavertree village, and the other near Wavertree Park, both to be built of brick in Portland cement, and for the ERECTION of a PUMPING STATION, with Engine and other necessary Works at the proposed Reservoir, near Wavertree.—Plans of the Works may be seen, and Tenders in accordance with forms of Tender obtained from and after the 15th of April instant, on application to Mr. THOMAS DUNCAN, Engineer of the Liverpool Corporation Waterworks at the Waterworks Offices, Hotham street, Liverpool, on the payment of One Guinea for each copy. Sealed Tenders, addressed to the Chairman of the Waterworks Committee, must be delivered at the Townhall, Liverpool, not later than TWELVE o'clock, on MONDAY, the 27th day of APRIL instant. The committee do not bind themselves to accept the lowest or any Tender.—By order,

WM. SHUTTLEWORTH, Town Clerk.

Townhall, Liverpool, April 9, 1863

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the 27th day of APRIL, 1863, at SIX o'clock in the evening, at the Office, 15, Great Alie-street, Whitechapel, to receive TENDERS for the CONSTRUCTION of a BRICK SEWER in Princes street, Hackney, for the Parish of St. Dunstan, and parts in the Hamlet of Mile-end New Town, within the said District.—Plans, section and specification may be inspected, and further particulars, with printed forms of Tender, obtained on application to Mr. FREDERICK Surveyor, between the hours of TEN and FOUR, at the Office of the Board. Sealed Tenders, to which a ten-pound note is to be inclosed must be delivered at the Office of the Board previous to the time of meeting; and any Tender which is not upon the printed form prepared by the Board and signed by the person or persons tendering, will be rejected. The Board do not bind themselves to accept the lowest or any Tender.

ALFRED TURNER, Clerk to the Board.

15, Great Alie-street, Whitechapel 15th April, 1863

HORNSEY, near the Station.—TENDERS are required for the CONSTRUCTION and FORMATION of 1,300 feet run, or thereabouts, of ROAD and PATHS, in Crouch End road, Hornsey. Also for the Construction of Six Gullies. Specifications, plans, and sections may be seen at the Office of Mr. JAMES LOVERIDGE, Surveyor, Finsbury Lodge, Dalston rise, Hackney, N.E. on MONDAY and TUESDAY next, between the hours of NINE a.m. and ONE p.m. The lowest or any Tender not necessarily accepted. Tenders to be sent in on or before the 23rd instant, endorsed "Tender for New Road, &c." and addressed as above.

Apr. 14, 1863

TO STONE MERCHANTS and MASONS. 7, Red Lion-square, 16th April, 1863.—Sealed TENDERS will be received at this Office until noon on MONDAY, the 27th instant, from persons willing to TAKE the WIDENING of the PATH round the centre of Red Lion-square.—All requisite particulars supplied at this Office, between the hours of TEN and FOUR o'clock

TO BUILDERS & CONTRACTORS.—These designs of CONTRACTING for the ERECTION of a PAIR of SEMI DETACHED COTTAGES, New Wimbledon, Surrey, may see the plans and specifications, prepared by Mr. Thomas Darby, Albert place, Peckham, Surrey, by application to Mr. WARD, 33, Westminster Bridge-road, between 9 and 11 A.M. and 2 and 4 P.M. on THURSDAY, FRIDAY, and SATURDAY, April 23rd, 24th, and 25th, from TEN to FOUR o'clock. Sealed Tenders, addressed to Mr. WARD, are to be written or before the 27th instant.—Further information on application. The said Mr. Ward will not bind himself to accept the lowest or any Tender.

STOCKTON and DARLINGTON RAILWAY.—To BUILDERS.—The Stockton and Darlington Railway Company are prepared to receive TENDERS for the following WORKS, viz.:—

No. 1. For the ERECTION of FOUR COTTAGES, at Middlesbro'.

No. 2. For certain ALTERATIONS and ADDITIONS to the PASSENGER STATION, at Mr. Skilton one Row.

No. 3. For the ERECTION of a WATER TOWER, at Saltburn-by-the-Sea.

No. 4. For a large CAST-IRON TANK and GIRDERS, for the Water Tower at Saltburn-by the Sea.

Plans and specifications for the above may be seen upon application to the Architect at the Railway Offices Darlington, at the following dates, viz.:—Plans, &c. for No. 1, from WEDNESDAY, APRIL 15th, to WEDNESDAY, the 22nd. Plans, &c. for No. 2, from MONDAY, APRIL 20th, to WEDNESDAY, the 29th APRIL. Plans, &c. for No. 3, from WEDNESDAY, APRIL 22nd, to WEDNESDAY, MAY 6th. Plans, &c. for No. 4, from MONDAY, APRIL 27th, to WEDNESDAY, MAY 6th.

Tenders to be delivered on or before the last named date in each case, addressed to the Secretary, and endorsed "Tender for Works." No pledge is given that the lowest or any Tender will be accepted.

(Signed) THOS. MAC NAY, Secretary.

Railway Office, Darlington, April 11th, 1863

LONDON GENERAL OMNIBUS COMPANY, LIMITED. The DIRECTORS are desirous of receiving, on or before 22nd inst. TENDERS for MAINTENANCE of LAMPS, and GAS FITTINGS, at their several Establishments, for three years, from 1st MAY.—Specifications may be seen at the Offices of the Company.—By order,

A. G. CHURCH, Secretary.

31, Moorgate-street, 16th April, 1863.

BUILDERS desirous of TENDERING for the ERECTION of a Pair of VILLAS on land at Kentish Town, can see the drawing and specification, and obtain other information, on and after the 20th instant, at Mr THOMAS T. GREEN, Surveyor, 4, Duke-street, Adelphi, W.C. Tenders to be delivered at the Surveyor's Office by FOUR o'clock, on MONDAY, 27th instant. The lowest or any Tender will not necessarily be accepted.

TO MASONS and PAVIORS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on TUESDAY, the 28th APRIL, 1863 at TWELVE o'clock at noon precisely, to receive TENDERS for RE-PAVING the CARRIAGE-WAYS of LUDGATE-HILL and STREET, and the FOOTWAYS of LOWER THAMES-STREET, respectively to specifications to be seen at the Office. Persons Tendering are required to give the names and addresses of at least two substantial householders as the sureties to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory; and no Tender will be received after TWELVE o'clock.

By the Court of Commissioners of Sewers, JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, 16th April 1863.

TO BUILDERS.—Persons desirous of supplying TENDERS for the REBUILDING and probable ENLARGEMENT of BODVARI CHURCH, in the Diocese of Saint Asaph, are hereby informed that the plans and specifications may be seen at Bodvari, on and after the 21st inst. The Tenders to be delivered at the Office of T. H. WYATT, Esq. 77, Great Russell-street, London, W.C. Architect, on WEDNESDAY morning, the 29th of APRIL. The Committee do not bind themselves to accept the lowest Tender, nor any of those submitted if thought unsatisfactory by their Architect

TO BUILDERS, &c.—HAILEYBURY COLLEGE, Herts.—Persons willing to TENDER for the EXECUTION of the several WORKS required in FORMING a LARGE SWIMMING BATH, 210 feet long, are informed that the contract, drawings, and specification will lie for their inspection at Haileybury College, near Hertford on and after WEDNESDAY the 22nd inst. until WEDNESDAY, the 29th APRIL inst. from TEN to FIVE each day, on which day Tenders will be received, endorsed "Tender for Bath," addressed to Rev. L. DERDES, the Hon. Secretary, Brantfield Rectory, Hertford. The Committee do not undertake to accept the lowest or any other Tender. Forms of Tender, copies of drawings, and specification, with quantities, may be obtained of ROBERT FORSTER FAIRBANK, C.E. 11, Adam's-terrace, Hampstead road, London, N.W.

London, 16th April, 1863

BROKEN GUERNSEY GRANITE.—MIDDLESSEX and ESSEX TURNPIKE ROADS.—Notice is hereby given, that the Trustees of these Roads are willing to CONTRACT for 4,000 yards of new blue GUERNSEY GRANITE, of the best and hardest quality, free from dust, by ken to a gauge of two inches and one half of an inch, to be delivered at the convenience of the contractor, between the months of MAY and NOVEMBER next.—Two yards of such Granite will have to be placed alongside the Wharf of Mr. TYLER, at Ilford Bridge, Ilford, Essex; and the remaining 3,998 yards at the Wharf of the Grays Chalk Quarries Company, adjoining Bow Bridge, Stratford, Essex, the Trustees bearing the expense of unloading the barges. Payment will be made for one half of the quantity of broken granite to be contracted for on the 25th of OCTOBER next, provided so much be delivered, and the remaining portion will be paid for in the latter part of the month of JANUARY following.—Forms intended to be delivered sealed and endorsed "Tender for broken Granite," are to be sent to this Office on or before MONDAY, the 27th instant, and therein undertaking to truly and punctually perform the conditions of such Tender under the penalty of 5s. per yard for liquidated damages. The Trustees do not bind themselves to accept the lowest or any offer.

GEORGE DARBY, Clerk to the said Trustees.

Turnpike Road Office, Bow, Middlesex, 16th April, 1863.

SHANGHAI GAS WORKS.—WANTED, TENDERS for the SUPPLY of the whole of the APPARATUS required for the above Works. Specifications and Drawings may be seen at Mr. ROLL'S Office, 71, Cheapside, City, London, on and after the 18th instant. Tenders must be delivered on or before the 30th instant, at the said Office, addressed to Mr. ROLL, 10, Coleman-street, City, London, on or before the 25th Instant.

TO BUILDERS.—Parties desirous of TENDERING for the ERECTION of a NEW WESLEYAN CHAPEL at Luton, Beds, can see the plans and specification at my Offices, on and after MONDAY, APRIL 27th, between the hours of NINE a.m. and SIX p.m. Tenders to be sealed, endorsed, and sent in on, SATURDAY, MAY 9th, at TWELVE o'clock at noon. The Trustees do not bind themselves to accept the lowest or any Tender.

GEO. HALTON, Architect.

Church-street, Luton, April 15, 1863.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER HANGERS, &c. &c.—The WATER-PROOF GLUE is a special and distinct article, available for carpenters, joiners, and cabinet makers. The VARNISH for damp walls, previous to papering, cutting zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Water, roof Glue as a preventive against damp, as I have found it most valuable in preparing walls to receive paper. In one instance where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

Tube-lead from all thicknesses, Oil, and Colourmen, &c.

Manufactory, Chandos street, Portsmouth. Mr. GEORGE WEEKS, Manager. GEORGE C WARDEN & CO. General Agents, 13, London-street, London, E.C. where specimens of its application can be seen.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

TO BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases the Imperial be preferred to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774

TO IRONMONGERS, BUILDERS, &c.

NEW PATENT PORTABLE STEAM ENGINES AND BOILERS.

Contractors' Locomotive. Stationary Engine. Steam Crane. Hoisting Engine. Agricultural Engine.

STATIONARY ENGINES.

THESE Engines require no Chimney-Shaft, nor Building whatever, a Cast-Iron Ash-pit forming the SOLE-PLATE, and they may be set up anywhere and started at once. Being very carefully made of the best materials, they may be perfectly relied on to work satisfactorily and, from their self-completeness, they may be erected and set to work by any ordinary mechanic to instructions supplied. These improved Engines have the great advantage of being applicable to a variety of purposes, the small space they occupy rendering them available where ordinary Engines cannot be used.

PRICES OF ENGINES AND BOILERS COMPLETE.

Delivered Free in Glasgow, Hull, Liverpool, or London.

TO BUILDERS, CONTRACTORS, and OTHERS.—BLOCKS, CRAB & CRANES, JACKS of all kinds, and TRAVELLING JENNIES of all sizes, to lift any weight from one to fifty tons.

Manufactured by ELI RICHARDS, 95, New Park-street, Southwark.

Foreign orders executed with despatch.

Chain for Slings, Cranes, and Blocks, in lieu of rope; equal to hoist any weight; warranted of the best iron and workmanship, and tested by patent machinery; on the lowest possible terms

SMOKY CHIMNEYS. — The best Cure is the PATENT ALBERT CHIMNEY CAP, 360 on Buckingham Palace; in use also at St. James's Palace, Windsor Castle Government buildings, mansions, public club-houses, and buildings in general. Prospectuses on receipt of two postage stamps

JAMES BARTON,
Iron Works, 370, Oxford-street, W.
N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines STRENGTH with great economy of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation, adapted to receive a finish, if required, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

PERIN'S PATENT BAND SAW BLADES.

S. WORSSAM & CO. beg to announce that they have purchased of Mons. Perin, of Paris, the exclusive right to SELL his celebrated BAND SAW BLADES (the superiority of which is universally allowed in the United Kingdom). S. W. & Co. have always a large assortment of these saws at their Works, 304, KING'S ROAD, CHELSEA, S.W. where also the Band Saw Machine exhibited by Mons. Perin in the Western Annexe, International Exhibition, is now on sale.

S. WORSSAM & CO.'S PATENT IMPROVED POWER MORTISING MACHINE.

(¼ inch scale.)

Combines many improvements not to be found in any other mortising machine. A single machine, worked by a man, with a boy to assist in removing the stuff, will do as much work as ten joiners, or as four hand-machines.—For Priced Illustrated Circulars, with full particulars, apply at the Works, 304, King's Road, Chelsea, S.W.

PRIZE MEDAL.

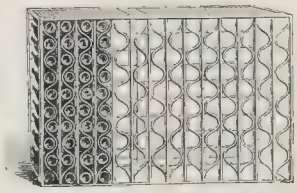
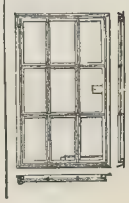
WROUGHT IRON WINE BINS.
FARROW & JACKSON



Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

No. 19, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

MARBLE OR STONE FENDERS, WITH METAL FITTINGS AND TILE HEARTHS COMPLETE, SUPPLIED AND FIXED.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

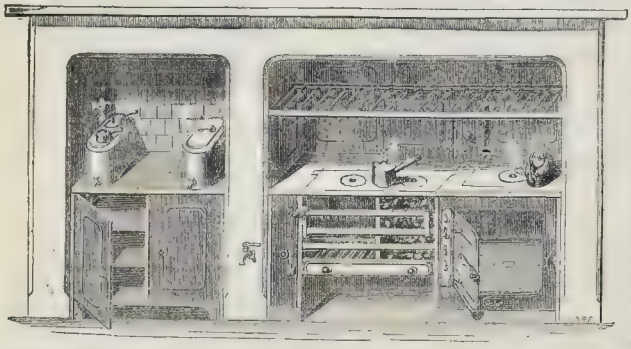
PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.



ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY.

OLD SAINT PANCRAS ROAD, LONDON, N.W.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

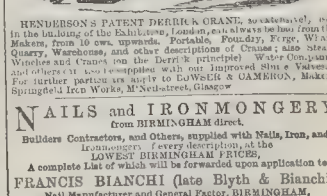
PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivaled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large M. AT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 15th, 1862.
"INTERNATIONAL EXHIBITION, CLASS 31.
"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Range is the placing of the OVEN and ROASTER one above the other instead of side by side; and the ROASTER is constantly replenished with fresh air."
INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER.
AGENTS FOR LONDON: BARRON, SON, & WILSON, 441, STRAND, W.C.
Illustrated Catalogues, with Testimonials and Prices, forwarded on application.



J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.
Estimates given from Architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

DAY and GAS-LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C.
These Reflectors never tarnish, require no cleaning, and are the most effective and durable yet presented to the public. All kinds of Bent Glass Silvered.
N.B.—The usual discount to builders and the trade.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medal for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, as extensively used in the building of the Exhibition, London, can always be had from the Makers, from 10 cwt. upwards. Portable, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can be supplied with our Improved Slips & Valves—For further particulars apply to DAWSON & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow.

Builders Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES,
A complete List of which will be forwarded upon application to
FRANCIS BIANCHI (late Blyth & Bianchi),
Nail Manufacturer and General Factor, BIRMINGHAM,
and 16, Gresham-street London, E.C.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

GEORGE JACKSON AND SONS
(Established in 1730)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV XV. XVI. and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Cups, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivaled.

VICTORIA BRICK and LIME WHARF and DRAW-DOCK, NINE ELMS, S.
BRICKS, TILES, SLATES,
LIME, CEMENT,
HAIR, LATHS, PLASTER,
SAND, BALLAST,
GLAZED DRAIN PIPES AND RED GOODS,
TERRA COTTA,
SPLAY, JAMB, AND COPING BRICKS;
SUFFOLK AND OTHER PAVIORS,
RED AND WHITE FACINGS,
STAFFORDSHIRE AND FIRE GOODS,
MALM CUTTERS, PICKINGS,
AND BUILDING GOODS GENERALLY.
A good Stock on the Wharf. Bricks, Sand, Ballast, &c. by barge alongside, where required.
JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

WHITE and RED SUFFOLK FACING BRICKS and other KILN GOODS,
By Messrs. Allen & Co. Ballingdon, near Sudbury.

The BEST WHITE and BUFF SILICA PRESSED FACING BRICKS from the DIPPENHALL WORKS, FARNHAM, SURREY.

The YELLOW and PALE MALM CUTTERS and FACING BRICKS by Messrs. Caleb Hitch & Co. Ware, Herts.

The YELLOW and PALE MALM CUTTERS and FACING BRICKS, SEWER PAVIORS, and BRIGHT COLOURED BRICKS, from the Fields at South Shoebury, Ingatestone, Essex.

The entire MAKE of BRICKS by Mr. William Ludgater, of the Upper and Lower Halstow Fields, and Messrs. J. Butcher & Son, of Otterham Quay, and Lower Rainham.

The MANUFACTURE of BLUE VITRIFIED SEWERAGE BRICKS, by Mr. W. Gilbert, of Tipton, near Tividale; and Messrs. Taylor & Co. of Cannock, near Walsall, South Staffordshire
The EWELL DEEP BLACK RUBBING and BUILDING BRICKS, and the EWELL and CHALFONT dark and bright RED RUBBERS.

COWLEY, KENT, and ESSEX BRICKS,
IN ANY QUANTITIES, BY BARGE ALONGSIDE.
JOHN and WM. EASTWOOD, WELLINGTON WHARF, Belvedere-road, Lambeth; and Kent-road Bridge, } SOLE CONSIGNEES.
The usual commission allowed to merchants of the trade.
N.B.—Every Description of the Building Goods of the Trade always in Stock.

BRICK and TILE MACHINES, which have obtained ten Prizes from the Royal Agricultural Society of England; the Prize Medal at the Great Exhibition in London, in 1851; Paris, 1855 and 1856; also, Royal Agricultural Society of North Germany, 1858; and Universal Exhibition of Rotterdam, 1858; and obtained two Medals at the International Exhibition, last year, may be had from the Manufacturer, JOHN WHITEHEAD, Preston, Lancashire.

BRICK and TILE WORKS, INGATESTONE.—ALFRED TUCK has on Sale Stock and Place Bricks, best Reds, Copings and Pavings, Plain Tiles, Pantiles, Ridge and Gutter Tiles, Drain Pipes, Socket Pipes, Garden Pots, Chimney Pots, and Hollow Pipes for Drains, Moulded Bricks for Jambs, Mullions, Tracery, Chimney Shafts, Cornices, Bases, String Courses, Parapets, Finials, &c. to great variety, delivered at any Station on the Line of the Great Eastern Railway.

OATES'S PATENT SOLID BRICK MACHINE.—Persons who may be contemplating MAKING BRICKS by MACHINERY are requested to see the above Machines in operation before purchasing others. These Machines are warranted to make thirty perfect bricks per minute, stiff enough to be wheeled (as soon as made) to the kilns to be burnt; and from the time the clay is dug from the mine until the bricks are made and set in the kilns for burning does not exceed five minutes.—Application to be made either to J. P. OATES, Erdington, near Birmingham; or to OATES & BAYLIE, Stourbridge, from whom drawings and every information may be had, with card to view.

VALUABLE PATENT RIGHTS FOR SALE.
BUNNETTS SELF-SUPPORTING HOLLOW BRICK FIRE-PROOF FLOORS, ROOFS, &c.
They are safer, lighter, and cheaper than any others, and have been successfully introduced in London and different parts of the kingdom, and most satisfactory testimonials received from eminent architects. Also,
BUNNETT'S CRITERION PATENT CONTINUOUS FEED BRICK, TILE, AND SANITARY PIPE MACHINE FOR STEAM OR HORSE POWER.
Which will produce, of superior quality, one-third more in quantity than any other machine of the same cost and working expenses. The above Patents will be sold together or separate, and are suited for private enterprise or a public company.
For prospectuses and particulars apply to Mr. J. BUNNETT, Engineer, Deptford, Kent.

BRICKS, PANTILES, AND PAVINGS.
J. H. ANDREWS, Wisbech, offers
Red Pantiles, at 50s. per 1,000.
" 9-inch Pavings, at 27s. 6d. per 1,000.
" Floor Bricks, 40s. per 1,000.
White Kiln ditto, 40s. per 1,000.
Ridge Tiles, at 75s. per 1,000.
Cash Prices. Delivered in Trucks in London, or along the Line on the Great Eastern Railway. About 20,000 Bricks lying at Devonshire street Station, at 22s. per 1,000.

BEAUTIFUL INLAID HAIRWOOD BOOKCASE, 8 feet 6 inches by 8 feet, FOR SALE.—28, Kenton-street, Brunswick-square, London

BENJAMIN EDGINGTON'S MARQUEES and PAVILIONS, for Royal and Noble Parties, for the Season 1863. Rick Cloths, with poles, &c. complete, new and second-hand; Netting and Battening for fruit trees, garden mats, &c. A quantity of Flags, used at the Royal Procession, to be sold as second-hand.—Address, BENJAMIN EDGINGTON, 3, Duke-street, Southwark, foot of London bridge, S.E. No other establishment.

The Builder.

VOL. XXI.—No. 1054.

Stopping and Starving. Bethnal-green.

NOTWITHSTANDING the cleanliness and order which are to be found in some of the Metropolitan workhouses, there are few sights which cause sadder feelings than a visit to one of those establishments which are amongst the necessities of the present state of our civilization. Here are lodged infancy and old age, the idle and those who would gladly work if they had the work to do. We have here the worthy and the worthless, the crippled or sick, and men and women in the prime and strength of life. In the Bethnal-green "Union," which is a spacious building, there are now considerably more than 1,000 inmates; and this is but a small proportion of the number who receive parish relief in this poor and now distressed district; and we fear that for some time, if measures are not used to avert it, the extent of pauperism will be greatly increased. There are various causes for this. The introduction of the sewing-machine is affecting the local tailors, needlewomen, and those engaged in the manufacture of boots, shoes, and many other articles. Steam-machinery and other introductions have made profitless various branches of industry. We live, indeed, in an age of wonderful change; and while measures are in progress for the general good, a large amount of suffering and distress falls on particular classes. Such being the case, we require new means for assisting those who are particularly affected by the present state of transition.

As we have often said, the amount of distress which exists in various parts of the metropolis can be understood only by those who have carefully examined such districts as Bethnal-green and similar parts of East London, where there are thousands of decent families in a state of hopeless destitution. Sickness and disease destroy many lives, but still there are many left who, without well-directed aid, will be likely to crowd our workhouses and prisons, and to be a source of trouble and difficulty. In the hope that publicity may be the means, in some measure, of preventing this, we will look again at parts of Bethnal-green and Spitalfields, and note the conditions of some of those who have been driven to seek help from the poor-rate.

The duty of a relieving officer in such a neighbourhood as this is a difficult one. He has in his hands matters of life and death, and when of a kindly disposition must find it no easy task to study the condition of the poor, act humanely, and give satisfaction to the board of guardians of a highly-rated parish. The experience of a gentleman engaged in this way in Bethnal-green confirms all that we have said of the great distress which exists in the place, and induces a feeling of admiration of the patience and worth of the chief part of the people. Going from house to house we hear the same tale told, and see half-famished and ill-clad children. We notice that, in nine cases out of ten, there is no chance for their future welfare without means are used which do not at the present time exist. At the corners of the streets may be seen groups of youths of the age of from sixteen to twenty (who are evidently not of the vicious class), lean, wan, and ragged. On speaking to these lads they will tell you that they are the sons of silk-weavers: they have no employment: some have tried to get into a man-of-war, but being over fifteen years of age, have been refused: they have tried to enlist into the army, but their chests or height will not pass inspection. *What is to become of such lads as these?* Many of them would do well in the colonies: good air, sufficient food, and employment, would soon improve their condition, and make them useful in those lands where labour is wanted, and the earth is fertile.

The relieving officer will only call at those houses where the people applying for assistance live: this seems in nearly every instance to have been a last resource; and who can judge of the great extent of the suffering which exists, and which has not been made known by any kind of complaint? The public has heard lately that some poor creatures have died of actual starvation. In the houses we find young women who have no employment, and who might, under proper care and guidance, be useful in the colonies, or they might be employed as domestic servants, or in some other way, at home.

The sanitary conditions of Bethnal-green have been before referred to, and it is pleasant to notice that many of the worst houses have been removed, and that better ones have been erected on the sites. In "Nova Scotia-gardens," and the parts surrounding, there is a marked improvement. There is, however, much to be done in this way, and it is to be hoped that, when the Main Drainage system is complete, care will be taken to make use of the sewer. Omitting just now, however, further reference to this matter, we will note the particulars of a few cases which, in the course of a walk, came under notice. The first was that of a young couple, the wife about to be confined for the first time. She had been a domestic servant before marriage. The business of the husband was that of brush-drawing, by which he had been enabled to earn 18s. a week. Work had become dull, and for some time he had been without his usual employment, and had sought work as a labourer at the docks. During the last fortnight he had had three days' work at 2s. 6d. a day (7s. 6d.). The rent of the room occupied by these people was 2s. 3d. a week. At times, but not as it appears driven to it by actual want, the wife had obtained work at a pickling warehouse, and could earn from 9d. to 1s. a day. Now she is unable to attend to this duty, and is obliged to apply to the parish for medical assistance. This is, in London, a bad beginning of life. We then found a man forty-six years of age, who had been formerly a plumber and glazier, but being unable, in consequence of lameness, to follow that employment, he now works at winding the cotton used for making fringe. In the course of a week, if the material were favourable, he could earn from 3s. to 3s. 6d.; at some times not more than 2s. 6d. The wife found occasional employment in washing: the whole income was not more on the average than 7s. 6d. a week; and there were, besides the man and his wife, two children to support.

Our next visit was to the home of a silk weaver, who occupies the top part of a house, every part of which is crowded with people. With difficulty we ascended the dark, narrow, and ill-constructed staircase. There were several hand-looms—all empty, except one, at which the daughter was at work, who, by long and hard labour, could earn 5s. a-week—a sum but little more than sufficient to pay the rent. The man and his wife had lived on the same spot for many years. "Forty years or so ago," said the weaver, "I could readily earn 2*l.* 10s. a-week; now I could not earn more than from 9s. to 10s., and work is not easily to be had. If a little present assistance be given, things will work round; times will mend—anything rather than go into the union." In several other instances, we noticed the same hopeful feeling: these people, seemingly, forget the regular decline of the prices, and that now, when they have fallen so low that they are not sufficient for support, work is still not easily to be found. With the exception of the looms there was no furniture of any worth. In such a case as this, the young daughters might emigrate with great advantage to themselves; but they would not like to leave their father and mother, who are getting old. And so they stop,—and starve.

In one miserable room was a woman with seven children: her husband appears to have left her. She worked at shoebinding. This business has become worse in consequence of machines having come much into use. She, with difficulty, could earn 4s. a-week, and 1½d. in each shilling was needed for thread, &c., thus reducing the wages to 3s. 7d. Three of the children are engaged,—when they are well enough to go,—at a lucifer match manufactory, and receive 2s., 1s. 6d., and 1s. a-week; so that, when fully employed, all that this family had for their support would be 8s. 7d., from which 2s. 6d. is to be deducted for rent, leaving 6s. 1d. for the food, firing, and clothing for eight persons. This woman would willingly get the elder girls into respectable service, instead of having them engaged as at present, but she has no influence, nor is she able, without assistance, to find suitable and decent clothing for them. This is often the case. In the workhouse we saw a woman and a girl, her daughter, between thirteen and fourteen years of age: they were dressed in the usual grey livery of the place: the girl looked modest, intelligent, and healthy: they were about to leave the house. On asking the mother if it was not possible to place the girl in some family where she would be well cared for, she said,—pointing to some dirty and tattered clothing which was airing by the fire,—"Who would look at her in these rags, and I can get no other?" The appearance of this young girl in her union suit, and that which she presented when turned into the street, formed a striking and painful contrast.

In the house of one weaver the children were ill with small-pox; one of them lying in a small, close, and stifling room. There the man was without employment, and had been nearly so since last Christmas; while before then for some time his work, and the help of some of the children at silk-winding, after the rent was paid, did not bring more than from 6s. to 7s. a week. One family earned 12s. by silk-weaving, the rent being 3s.; another 8s., rent, 2s. 3d.; another 9s. We called at the house of a weaver which was comfortably and tastefully furnished, but the man had been in business many years. He said:—"In better times I laid away for a rainy day. I could not manage, as you see, if I had done otherwise; but my son, who has the world to begin and a family coming about him, is sadly off. If you will call at his house you will see, notwithstanding what little help I can give him, to what a state he is reduced, and there is no hope for him to do better." The young man and his wife, for their children's sake, as they said, would gladly emigrate if they had the means of doing so. Many expressed a similar inclination; but on the part of others there seemed to be a listlessness, a patient suffering of the greatest amount of poverty, rather than willingness to seek for change. Many have an idea that those who have been enabled to emigrate from the district have been badly used; but although we made diligent inquiry for letters which would substantiate this, we were not able to see any.

Intelligent in many respects, it is a matter for regret that the people of this class should be so ignorant of social and sanitary laws as they are: they might with but a little trouble be readily taught. When, for instance, a silk weaver will gravely tell you that the present state of business is caused by the French or other foreign trade, or by "Gladstone,"—not mentioning that gentleman's name with particular favour,—if we lay our hand upon his old-fashioned loom and say, "It would be just as possible for the old stage-waggon to compete with the locomotive as for you to con-

tend with steam-power silk-looms:" "Well, at any rate," says the weaver, "it is very hard for us." When reminded, however, of the present price of bread and other necessaries of life in comparison with the uncertainty in this respect of other times, he comprehends the matter readily. Great good might be done not only amongst the silk weavers, but also those who are connected with other depressed branches of industry by the spread of information.

At the present time help is most needful in these districts; and it would be well for some of the influential dwellers in the west of the metropolis to go over to the east. If the case of these people were rightly understood, we should see the hard-working clergymen of Bethnal-green and Spitalfields assisted in their labours: we should have means provided for those who feel disposed to emigrate, and a monster evil to a considerable extent remedied. We will presently give some further account of the people here, and of the means which are available for improvement.

The general question of the health of London, as affected by the conditions under which thousands in it live, is again forcing itself on the minds of inquirers. While public attention has been directed to Lancashire in anticipation of a great outbreak of fever among the cotton operatives, an epidemic of fever has been silently raging in the metropolis far surpassing in extent any observed during the past fifteen years. According to the *Lancet* of this week the deaths from fever in the metropolis, which in 1860 did not exceed 1,392, rose in 1862 to 3,635! At the Fever Hospital, from whose reports the most accurate information is obtained, 391 admissions were the total for 1860; but in 1862 it rose to 2,699, being a thousand more than had ever been admitted in a year to the hospital. It is obvious that 3,635 deaths in twelve months must represent an enormous prevalence of sickness from typhus. It is important to know of what kind the fever is. From the records abovementioned it is shown that it is the true spotted typhus which is, and has been raging—the gaol fever of Howard; the "Irish typhus" of modern writers; the fever which decimated our Crimean army, and is now ravaging the Federal hosts. In the year 1855 the typhus admissions to the Fever Hospital did not exceed fifteen, and during seven months of that year only one case of genuine typhus was admitted; but during the year 1862 they have risen to the unprecedented number of 1,827, while the admissions for gastric or typhoid fever did not exceed 220, or about the average of the fifteen preceding years. The causes of typhus are not doubtful: they are overcrowding, destitution, and bad ventilation. It is our old, old story again and again.

BRITISH SCULPTORS.

THE FAMILY OF "THE MARSHALLS."

I AM pleasantly reminded by more than one "constant reader," of the *Builder*, that in my last communication to your columns ("The Family of the Cures"), I omitted "accidentally," in my catalogue of hereditary sculptors,—"The family of the Marshalls." That the omission was "accidental," my present communication, full of new and unknown materials for "The Family of the Marshalls," which I have had by me for many years, will, I trust, be at once apparent.

There were *three* Marshalls eminently distinguished in clay, in plaster, and in marble, living and "flourishing" in London between the accession of Charles I. in 1625, and the death of Charles II. (1684-5). Their Christian names were (I give them alphabetically), Edward, Joshua, and William.

I. Edward was master-mason to the Crown in 1662, and was succeeded in his office by his brother Joshua.* Edward lived in Fetter-lane, Fleet-street. This Aubrey assures us, and his information is confirmed by those curious MS. papers called "The Fire of London Papers," now happily preserved in the British Museum. There I read as follows:—

"EDWARD MARSHALL, mason, a parcel of ground with several tenements and yards thereunto belonging, lying on the east to *Fetter-lane*, on the north to the passage called Bond Stables, on the south adjoining to the buildings of one John Dawling, gent., and on the west butting on the garden of the Master of the Rolls."—*Addit. MS. Brit. Mus.* 5063, *fol.* 182.

This Edward Marshall made the bust in Westminster Abbey of Michael Drayton the poet,* erected at the expense of the *famous* Anne Clifford, daughter of an Earl of Cumberland, and wife *first* of Sackville Earl of Dorset, and secondly of Philip Herbert Earl of Pembroke and Montgomery, and who consequently, throughout a long final widowhood, was obliged by the rules of the Heralds' College to divide her titles as she had done her heart, between two dear defunct husbands, by signing herself "Anne Pembroke, Dorset and Montgomery," according to the peerage creations of her two lords; a case without parallel, I believe, in the history or romance of the English peerage.

Edward had, it would seem, a taste for poetry. He "wrought curiously in plaster" the bust of his "great friend," Francis Quarles, and "valued it for Quarles's sake." "'Tis pity it should be lost," Aubrey writes to old Antony Wood. Is its whereabouts at all known?

By *Edward Marshall* there are two white marble and well-executed monumental busts in Tottenham Church, Middlesex, representing Sir Robert and Lady Barkham, of Wainfleet, in the county of Lincoln. Sir Robert died in 1644. Their eight children kneel near to the busts. This monument should be seen by all who are curious in identifying the works of our early sculptors.

The editors of Walpole's "Anecdotes," Mr. Dallaway in 1826, and Mr. Wornum in 1849, have wholly overlooked a *printed* notice of Edward Marshall. I shall, therefore, transcribe it entire for insertion by all who are curious in perfecting and illustrating that delightful work:—

"Barn-elms House in Surrey, with orchards, gardens, coach-houses, stable, grazing for a couple of geldings or cows, spring-water brought to the house in leaden pipes, pleasant walks by the Thames side, and other accommodations, is to be let, or otherwise may be divided into two convenient dwellings, with garden, orchard, and water to each of them. Inquire farther of *Mr. Edward* MARSHALL, a *stone-cutter*, living in Fetter-lane."—*Mercurius Politicus, 5th May*, 1659.

Among *Edward* Marshall's other works—"Marshall of Fetter-lane,"—Walpole's editors should include the monument to Sir Richard Verney at Compton, and of the Earl of Totness at Stratford-upon-Avon. Sir William Dugdale, in his Pocket-book for 1653, records that they came from the chisel of "Marshall of Fetter-lane."

II. JOSHUA (whose best works are to be seen at Campden, in Gloucestershire, and Swansea, in Cambridgeshire) was employed on a well-known work in Westminster Abbey, as the following fragment (now first published) will convince my readers:—

"To the executors of *Joshua Marshall*, deceased, for making a monument at Westminster, for the bones of a Prince found in the Tower of London."—*Works Accounts of the Crown for* 1678 9.

The monument to the princes, King Edward V. and his brother, is a sarcophagus, neatly wrought in white marble. Sir Christopher Wren gave the design. And here I may ask, would my friend, the distinguished sculptor, Mr. William Calder Marshall, R.A., make a like sarcophagus for a like amount? I wish Mr. Marshall would look at his namesake's work, and let the readers of the *Builder* know what a like work would cost at the present time. A practical opinion of what a duplicate would cost would give us a further clue to the value of marble and labour in the years 1678 and 1863.

III. Of William Marshall I can give no further account than that he was born on the 7th of October, 1606, and that the star—the figure of his nativity ascendant in the skies that day—is preserved among Ashmole's MSS. at Oxford. This I have never seen. A sculptor's nativity cast by Ashmole might fitly find a place in a column of the *Builder*.

My last new *material* relating to the Marshalls is from the MS. vestry minutes of St. Martin's-in-the-Fields:—

"1658, Sept. 24.—Ordered that Mr. Marshall, stone-cutter, do pay twenty shillings per annum for the privilege he hath in laying stones in Hedge-lane: to which Mr. Marshall being present consented;—the twenty shillings per annum to be paid from Michaelmas now next ensuing."

Hedge-lane is a narrow but much frequented thoroughfare leading from Pall-mall East to Coventry-street. Let us contrast it in 1658, when Mr. Marshall was suffered to make a marble-yard of it, with the crowded and equally narrow Hedge-lane of 1863. PETER CUNNINGHAM.

* Audit Office Enrolments (MS.), vol. vi. p. 427.

* Aubrey's "Lives," art. "Drayton."

THE ARCHITECTURAL EXHIBITION.*

MESSRS. DEANE & WOODWARD exhibit a drawing (190) of the Staircase Angle in their design for the War Office, in which the raking lines of the interior are shown externally. The arrangement may have influenced subsequent designs for other buildings by various architects. Messrs. Deane & Woodward's works executed, or to be executed, are unfavourably represented; but it can be seen they are not all quite satisfactory. The "Dormer in the suggested New Roof of the Town Quadrangle, Oxford" (223) is very bad as Gothic. Where in Oxford, is the "quadrangle?" The "House for the Marquis Clanricarde, Portumna" (328) would we fear have some rooms badly lighted, from the adherence to the Gothic forms. Another drawing (344) represents "Portion of New Buildings, Oxford." The Hall of Cork College (306), by Sir Thomas Deane, has an open roof of the Westminster Hall class. Mr. E. W. Godwin, of those using the Gothic style, is one who best reconciles the observance of all that is good in it, with the infusion of new design. We need object only to the canopies of statues, which are *stuck on* to a building instead of being partly supported from below, as they should be, however slightly, in appearance. His Northampton Town Hall (171), has, besides numerous features of the version of Gothic that is in fashion for the class of buildings, and some good sculpture, a well-contrived and effective recessed porch or *loggia* of entrance, formed of three arches in front, rising from columns,—the centre archway being appropriated to steps, and the sides to look-out spaces. The same architect also shows two alternative designs for the Town Hall, Tiverton. One of them presents a capital Gothic elevation; and the other, with semi-circular arches and pierced tympana to the windows, is more novel, and is otherwise good.

Amongst the designs for works of art-manufacture, are two by Mr. A. B. Donaldson, a nephew of the Professor. One of them (183) "for a Mural Painting over an Altar" is archaic in style, and appears rather crude in colour through the contrast of brilliant blue sky, and red and gold ornaments, with the brown in which the groups of figures are outlined and shaded. The subject is "The Word of God," represented by three stages of figures, Christ delivering the Gospel being at the top, with angels swinging censers, the Evangelists with their symbols next, and the eight other Apostles at the foot. The other design (184), "The Mysteries of the Cross," whilst more elaborate, is better studied in every respect. It represents the head of a cross divided into many compartments, which contain subjects representing scenes connected with the Cross, or allegories from the Scriptures. The Saviour on the Cross occupies a central compartment; round this are subjects from the Old Testament; elsewhere are scenes from the Crucifixion, and from the history of the early Church, as the discovery of the true cross: at the foot, walk in procession, priest, king, knight, lady, and the poor and maimed, each one having taken up his cross, and following the Saviour; whilst in the top compartment is represented the proclamation of the Resurrection. Each compartment is treated in different tints of the same colour, as neutral green, violet, light red, or blue,—though some of the first-named colours have a blue background; and the colours are balanced symmetrically with reference to the centre of the general design. It is a very clever work. Mr. Burges exhibits a sketch (202) of "Designs for Secular Jewelry." Specimens of the Chevalier Salviati's mosaic appear on one of the screens: but they are not so well placed for judging of their effect, as they are for looking at them closely. Near them is a specimen of Messrs. Maw's mosaic, a head from a design by Mr. Digby Wyatt; Mr. Maw also contributes an excellent drawing of the mosaic pavement in front of the altar, Torcello (382), and one of that in front of the shrine of St. Thomas à-Beckett, Canterbury Cathedral; and from Mr. Lightly's sketches we have useful records of the pavement of a chapel in the church of S. Miniato, Florence (131), and of the "Opus Alexandrinum"

* See pages 217, 236, 255, *ante*.

of the nave (140); both the pavements being now removed.

A screen is filled with sketches contributed to the Class of Design of the Architectural Association during the session 1861-62. Amongst them are a "Village Railway Station" (392), by Mr. Wimbridge, and the "Chancel of a Church" (393) by Mr. W. L. Ridge. Some of the designs testify to the serviceableness of the class in aiding the practice of perspective drawing, and the study of perspective effect. The study is most essential; although it is strangely neglected in some Continental systems of teaching. Some of the designs of the "class" however do not afford evidence of the study of planning. The omission, in an exhibition, considering the purpose of exhibition and the announcement in such a title as "Church to accommodate 500 persons" (412), would be a blunder, even where plans securing the objects had been really made. The plan, which is cruciform, in one of the designs (394), may not secure the objects, if we are right in the views taken in our first article; and the tower in the same design is out of all proportion to the church. The "class" must not lost sight of uses of buildings, and of actual dimensions; for, recognition of such points it is, that constitutes the business of architecture and our special art. Some of the best of the designs are by Mr. R. P. Spiers: we may especially mention the "Fire-place" (414), albeit, we can trace some of its details to originals. Mr. Spiers is a contributor to departments of the Exhibition; his drawings include a sketch (180), "Design for an Observatory," and a frame of "Scraps from France" (136). Reverting to the points of convenience and practicability as least of all to be discarded in designs exhibited to architects, we may call attention to a pencil drawing which hangs in the south-west corner of the west gallery, and represents a design for a proposed building. Chimneys terminate certain gables, in which there are windows; and we cannot find out where the flues would be taken up in sufficient space.

Of sketches and studies from old buildings, the largest contributor is Mr. Digby Wyatt. His "Coloured Study made on the Spot, of San Benedetto Subiaco" (201); "Studies of the Mediæval Architecture of Germany" (230), which are numerous; "Twenty-one Studies of Mediæval Architecture and Sculpture of Northern Italy" (246); and "Outline Study, with the brush, of the principal Doorway of Naples Cathedral" (250), are of value; and they ought to be published. Mr. R. W. Mylne contributes three very interesting drawings (330 to 332) of steeples belonging to the same family as the St. Dunstan's in the East, and Newcastle-upon-Tyne examples. They are, in order of date, from the middle of the fifteenth to the middle of the sixteenth, the steeples of St. Giles's Church, Edinburgh; King's College Aberdeen; and the parish Church, Linlithgow. The last-named steeple was taken down in 1862. The first of the three was restored and partly rebuilt in 1648, by John Mylne, King's Principal Master Mason; and the second, originally built in 1509, was rebuilt, according to an inscription, by "George Thomson, Architect, 1634." The drawings are, we believe, copies of photographs, taken expressly for the purpose of the illustration. Professor Donaldson has sent a drawing (189), which is certainly not less valuable as a record, than the other works of the class. It shows an angle of the Parthenon, and is a study made, now many years ago, on the spot, "to retain a record of the tones and tints on the entablature and columns;" and, showing that his pencil of last year, or 1861, was not idle, he has also sent a drawing of the "Court of the Nubian Khan, Cairo" (195); one of "The Sphinx on the Plateau of the Gizeh Pyramids" (283), and one of a "Fountain with School over," in Cairo (284). The Rev. J. L. Petit, Mr. J. B. Waring, Mr. F. T. Rogers ("Sketches in Normandy" 124), Mr. G. L. Beetholme, and Mr. J. W. Wild, should also be named as contributors of drawings. In the same class of works will also be found a record (312), perfect as far as the state of the original admitted, of the design and construction of the "Wooden Spire at Chalons-sur-Marne, from measurements," by Mr. W. Burges, and a capital set of illustrative "Sketches" (295 to 300) of what is left of that still too seldom appreciated building, the Church of St. Mary Overy, Southwark.

Above the drawings in the principal room, which have formed the subject of our review, are works to which we referred in a preliminary notice of the Exhibition. They are the cartoons of the mural paintings executed by MM. Guffens & Swerts in the Chamber of Commerce, Antwerp, that were destroyed in August, 1858, when on the eve of their completion, by the fire that consumed the Exchange. They include scenes from the commercial history of Antwerp, portraits, allegorical representations of the four quarters of the globe, and of the products of commerce and agriculture. With them is a cartoon representing the St. George over the high-altar of the church of that saint in Antwerp, cartoons of paintings in the new church of St. Nicholas, East Flanders, and of a triptych executed for the castle chapel of Noisy. They show considerable ability.

We have made many suggestions, this year or previously, for the amendment of the catalogue and towards making the Exhibition representative of the actual state of architecture.* Let us now add, that it is still difficult in many cases to discover from the titles of drawings, whether the buildings are erected, are in course of erection, are merely proposed to be erected, or are simple designs. Contributors of drawings should, if possible, be induced to word their titles so as to leave none of the points in doubt; and designs made on a defined programme of requirements, areas and dimensions, and outlay, should be immediately distinguishable from those where these considerations have not constituted a basis.

Mr. W. White, who exhibits several drawings, deserves to be commended for the complete manner in which he has explained by plans and other illustrations, the nature of the works he has had in hand. We repeat, what we have been saying for years, that mere views, which are not explanatory of the actualities of arrangement of buildings, are valueless for the main purposes of an exhibition that is to be visited by architects.†

THE WEDDING PRESENTS IN THE SOUTH KENSINGTON MUSEUM.

On Wednesday evening, a well-dressed crowd filled the museum, in order to have a *private* view of the jewels, china, lace, plate, and dresses, which were presented to the Prince and Princess of Wales, on the occasion of their marriage. The use of some of these beautiful things must have been given up with personal inconvenience: the two or three empty compartments at the bottom of the very handsome toilet service presented by the members of Her Majesty's household, suggest this fact, and increase the pleasure with which we look at the collection. It was a kindly and admirable act on the part of their Royal Highnesses thus to take the people into their confidence; and is duly appreciated. The presents are elegantly arranged in the new North Court of the Museum, which was built for the exhibition of sculpture and monumental objects of Italian origin, especially such as were designed for being placed in the open air; and we may note that this occasion has been taken advantage of, to arrange the court to some extent according to the original intention, which was to provide a covered space with light as nearly as possible like that of the open air, so as to produce a general effect similar to that of an Italian cortile open to the sky and surrounded by cloisters in subdued light. The Waterloo vase and some other pieces of English sculpture are at present in the court; but, when the exhibition of the wedding presents is concluded, the general arrangement of objects will be continued with the view of ultimately devoting this court to the display of specimens of Italian origin only. Mr. Cole, Mr. Redgrave, Mr. P. C. Owen, and others, have been working hard in the arrangements. Mr. Crace has fitted to each of the well-known Venetian Standard-bearers (good specimens of electrotype, by the way), a gay gonfannon with appropriate mounting. The staff is of zinc, doubtless carefully secured, for the leverage is long. The total height is probably 50 feet.

Many of the works are of admirable quality. In some, however, a want of design is to be regretted. For example, the costly gift of the city of London (17) is simply a string of thirty-two brilliants without one touch of art for the 10,000*l.*; and that of the ladies of Liverpool is simply a string of pearls to carry a certain number of brilliants formed into a cross. The necklace given by the King of Denmark, carrying the cross of Dagmar, is of a very different character, and does credit to Jules Didrichsen, of Copenhagen. The *parure* of opals and brilliants given by the Queen, from designs by the Prince Consort, No. 1, is exquisitely beautiful; and, with the pearl and diamond necklace given by the Prince of Wales (3), earns praise for Garrard. The bracelet (15) contains miniatures of the eight bridesmaids, the donors, each in a separate compartment. The Danish gold ornaments (13, 16, and 24), by Michelsen and by Dahl, both of Copenhagen, although wholly imitative, reproducing the ancient torques and rings and patterns in filigree, are exceedingly interesting, and are good specimens of work. The city of Norwich sent their shawl (62) in a very fairly executed cedar box, mounted in metal and partly painted, in Mediæval style. The worked shawl and flounce from the ladies of Ireland; the Princess of Hohenlohe's fan-mount; Lady Buchanan's inlaid marble casket; the Duke of Buccleuch's vase (30); and the Bible given by the British and Foreign Bible Society, would each form topics for praise and comment.

The Museum authorities must look to have many visitors.

PICTURES OF THE FRENCH AND FLEMISH SCHOOLS, PALL-MALL.

If this, the tenth annual exhibition of foreign pictures that London has accepted as one of the customary events of the season, will do little in extending full knowledge of the schools represented, it will at all events assist in keeping up a very pleasant and desirable acquaintance with them; an acquaintance, by the way, that before the opportunities afforded by International Exhibitions infinitely improved it, was in a great measure brought about by the energy and enterprise of its director, Mr. E. Gambart, and maintained, how efficiently was best certified by the numerous instances wherein productions with which he had already made us familiar had been selected as adequately sustaining the reputation of their respective authors on these greater occasions. The more we learn of foreign art the better for those who think too much of it, to the detraction of our own; and for those who, more patriotic, err just the other way; and, better still, for others who, going their own way, like that best which pleases them most; and regarding art in its abstract light as a language common to all civilization, welcome alike anything that ministers to their enjoyment of its worth, whether home-grown or imported.

And the more we do learn the more strongly the evidence presents itself that, in all that constitutes its excellence, our share of possession is sufficient to absolve us of any reason to be envious; and when it is remembered that the most we see of our Continental neighbours' performance is the result of judicious selection from the mass, some significance attaches itself to the short number of contributions to this, the present collection of French and Flemish pictures, and others preceding it, as well as to the recurrence of the same names so constantly chronicled in their catalogues.

Further than this, if anything like a conclusion may be deduced from somewhat restricted premises, it is inevitable that the shortcomings evident in our own school are not confined to us,—that the same want of purpose, of earnest intention to interest any sense beyond that of seeing, is common to the English and French alike. Not to the Flemish, however! Historical depiction has become almost a tradition. The only exception here worth recording is the magnificent one furnished by Baron Henry Leys; and this would have been a centre of attraction amongst far nobler surroundings than it has.

With all its square simplicity of forms and rigid adherence to probability, the "Entrance of Archduke Charles, in Antwerp, 1514" (76), commends itself at once as the work of a great painter. The incident expounded has an extra grandeur imparted to it by its originality of treatment, so thoroughly in keeping with it in every detail,—that of "The Sovereign, before entering into the town, making oath before the Burgomaster to observe the existing laws, and to respect the privileges of his future subjects;" and something in it peculiarly adaptative shows that it is a finished study in oil of one of the series of pictures he has been commissioned to paint in fresco for the decoration of the town hall at Ant-

* With reference to this point we insert the following note:—"Would you kindly correct a misstatement which appeared in your number of April 4 respecting my drawing (No. 234) in the Exhibition? The error arose, not with your critic, but with the compiler of the catalogue. The drawing in question has nothing whatever to do with the improvement of the Kensington building, but was submitted, by myself in conjunction with Messrs. Hickes & Isaac, of Bath, in competition for 'the Dublin Winter Garden.'—John Giles."

† In one of our articles, page 218, the word "acute" was hastily written for "*obtuse*," in describing the angular form which is that of the plan in one of the Westminster Chapel designs; and in speaking of the designs numbered 98 and 99 for the Cork Cathedral, the transepts were erroneously described as "features only externally." And in the following article, where we were speaking of galleries, the printer slightly altered our words; which had alluded to the eighteenth century, and the latter half of the seventeenth, as comprising the especial period of prevalence of those features in churches.

werp, an undertaking for which few are so well qualified as he is. The composition embraces a numerous assembly of figures, each individualized by a quaint distinctive portraiture, that prevents the circumstance of their standing in rows and unvaried attitude from giving that appearance of repetition almost unavoidable in such an arrangement. The two figures of heralds, seated full-faced to the spectator, admirably contrast this, although they do convey rather a Gog and Magog flavour to our municipal apprehension of the subject, attaining their gigantic proportions, perhaps, from their proximity, at the foot of the stairs that lead to the platform on which the ceremony takes place. As usual Baron Leys marvellously identifies himself with the period he illustrates, and the power with which he realizes natural appearances (of technical dexterity he is singularly unconscious), is still a lesson that apparently few will try to learn, excepting those who learn nothing more.

Amongst the French works, the large and ambitious attempt of M. Grenier de St. Martin to render interesting a most uninviting theme—"Henri III. and his Minions, the Evening before the Barricades" (43), is even less successful than might have been expected, in spite of all obstacles: it does not tell the story, and the composition is in itself so scattered, and furthermore broken up by a singularly discordant arrangement of colour, that no one point has prominence over another: this, and the heavy, black, but cleverly-drawn "Procession in Paris during the League" (93), of M. Robert Fleury—an old specimen obviously, and not a favourable one—are the only other competitors in the historic arena.

But the gist of the exhibition subsists as usual amongst those who, if less pretentious in their object of attainment, are most perfectly successful in arriving at it. The wonderfully minute finish of M. Meissonier will still astonish in (79) "The Etcher;" and the exquisitely truthful grace with which M. Edouard Frere relates the commonest episodes of humble life, is thoroughly exemplified in the four scenes: (34), "Breakfast-time at the Farm;" (35), "The Widowed Mother;" (36), "The Arrival at School;" and (37) "Children overtaken by a Storm." These are all imbued with that charming poetry of expression that is autographic by this time, and quite indescribable: something of this quality is reflected in the "Young Boat-builders" (116) of M. Thom, pupil of M. Frere, and in a less degree in (115) "The Sledge."

The influence of tuition is more emphatically pronounced in the works of M. Ruiperez, pupil of M. Meissonier. His "Guitar Player" (96), and (97) "The Lecture of a Manuscript," are curiously close imitations, without that intensity of elaboration for which the master is famous. M. Plassan, whose characteristics are sufficiently designated for easy recognition in (90) "After Dinner," and (92) "The Last Novel," has produced a perfect gem in (91) "The Evening Prayer."

That M. Duverger follows in the footmarks of M. Frere with evident appreciation of such direction (23) "The Little Flower Girl," and his "Village School" (26), bear witness, though comparison will readily show that a want of delicacy is added to a want of that which is really inimitable.

M. V. Lagye timidly adopts something of the style of Leys in his "Toy-shop in Antwerp in the Fifteenth Century" (64), and stronger evidence of some such emulation having affected M. Tissot is very apparent, although in his "Faust and Marguerite" (117) he seems to have preferred Holbein pure and simple in his ultra crudity and contempt for the pretty. (118) "Young Luther at Church" might be mistaken for Ley's, with all the drawback of immaturity, although, putting aside this as an objection, it is praiseworthy and promising. Some professional slight induced the production of "Valuers and Appraisers" (16), by M. Decamps, but in the indulgence of his sarcasm it was impossible for the painter not to assert himself, so that his amusing caricature turned out, "*nolens volens*," a masterpiece. If it were to retaliate for an adverse judgment upon any such work as this that these sagacious monkeys were so wonderfully humanized, the universal suffrage, now, must be in his favour and justification.

Among the absent of those who have helped much to establish this Exhibition, Mdlle. Rosa Bonheur must be most generally missed; but this is to the advantage of M. Auguste Bonheur, who wins, in consequence, the more admiration for his really remarkable "Meadow Scene in Auvergne" (6), shared to a degree by another member of the family, Juliette, for a very faithful and true-looking study of "Sheep in a Meadow" (Spring Time) (7). Mdme. Jerichau's "Danish Girl going to Church" (53), and M. Schlessinger's well-painted fancy portrait, entitled "The Parasol," will attract attention; and for manipulative dexterity, even where so large an amount is visible of it prevails, (62) "The Church Porch," M. Koller; (135) "The Introduction;" and (136) "The Proposal," by M. Florent Willems, who seems specially addicted to "giving to airy nothing a local habitation and a name," relying entirely upon his executive proficiency, are conspicuous.

Far above these is to be cited "The Conversation at the Window," by M. Alfred Stevens, whose ladies are always ladylike and charming. It is a proof of the power of genius to exalt commonplace subjects. (42) "Camels at the Fountain" barely does justice to the position and claims of M. Gerome; nor the "Unloading Boats: Low Water," (123) of M. Troyon, whose ploughing scenes and others live long in the recollection, and create sanguine expectations. The landscapes are few, and not of the best description.

THE LIVERPOOL NEW CEMETERY, — ANFIELD PARK.

This extensive cemetery, of which we have already given some particulars, is now rapidly approaching completion, and the local Burial Board is about to open it to the public for interment. It is little more than twelve months since the contracts were taken.

The following particulars as to the building are gleaned from the local *Courier*.

On a piece of gradually rising ground, running round the north-eastern side of the central area, have been erected the three churches, and the catacombs, which impart a picturesque character to the surrounding district, the lofty spires of the three edifices marking the site of sepulture to the country around for several miles. The building intended to be devoted to the services of the Church of England stands in the centre, whilst the Roman Catholic edifice is on its north side, and that for the use of the Nonconformists on its south side, and near the Priory-road entrance. The style of architecture of the three churches is that of the Early English. They present much similarity to each other in point of exterior architectural design, the edifice in connexion with the Established Church differing from the others in respect of its being slightly larger and octagonal at each end, whilst the others are octagonal only at one end. The interiors of the Roman Catholic edifice and that for the Nonconformists are considered more strking as regards light, shade, and general effect.

There are two sets of catacombs, the one being between the Protestant and Roman Catholic edifices, and the other between the Protestant and Nonconformist churches. The catacombs are formed out of what may be termed excavations from the level of the ground on which the churches have been erected, and descend to a depth of several yards below. They are approached by flights of stone steps, leading from the surface, which is flagged over, and enclosed by walls (relieved by opaque windows) which rise to an elevation of several feet, the roof being partly formed of thick plate-glass in diamond form, to admit of light. Within the enclosure thus formed above the catacombs are constructed corridors, or arcades, for the reception of monuments and tablets. There is an avenue in the centre, where the monuments generally will be placed, and from the construction of the buildings the monuments may at any time be seen from the exterior at each end, but entrance to the interior will be necessary to inspect the tablets.

There are four entrances to the cemetery, the principal one being at the south-west corner, at the junction of Mere-lane and Priory-lane. At each side of this entrance there are two lodges, with a lofty clock-tower in the centre. On the east side of the main entrance, in Priory-road, are the registrar's residence, the board-room, and offices for the transaction of the business of the Board.

The whole of the grounds are enclosed by a stone wall, surmounted by ornamental iron palisading.

The cost of the buildings, including the churches, lodges, registrar's house and offices, clock-tower, and enclosure walls, will be about 30,000*l.*; whilst the expenses of laying out and planting will amount to 18,000*l.*; making, with the purchase of the land (75,000*l.*) a total expenditure of 123,000*l.*; but from this has to be deducted the sum to be received from the London and North-Western Railway Company, leaving the actual cost of the cemetery [140 acres, but limited to 100 acres in the meantime for cemetery purposes] about 120,000*l.*

The planting has been carried out with a strict regard to avoiding the appearance of too thick grouping in those portions where monuments are likely to be placed, and every attention has been paid in order to make the grounds attractive as a resort for innocent pleasure, whilst their peculiar character will at the same time inspire feelings of deep and silent contemplation.

Messrs. Lucie & Littler, of Tranmere, are the architects for all the buildings, including the three churches, the catacombs, lodges, and gates. Mr. Wortley, engineer, has had the superintendence of the laying out of the roads and grounds; Mr. Abraham Thomas being the contractor. During the time the works on the roads and grounds have been going forward, there have been, on an average, 600 workmen employed, and about the same number of horses and carts.

THE SUN PHOTOGRAPHING WITH PRINTER'S INK.

The discovery claimed by Mr. John Pouncy, of Dorchester, is a very remarkable one. By this process photographs are literally and at once imprinted directly from negatives with printer's ink on paper by the sun. Zincography was a notable enough step towards sun-printing with printer's ink; but in that more roundabout and indirect process *the sun* does *not* print upon paper with printer's ink; whereas, in this case, the ink takes the place of nitrate of silver and everything else whereby surfaces have heretofore been made sensitive; so that the process is a direct operation of the sun itself with printer's ink on paper. We have seen photographs done by Mr. Pouncy in this way; and really they are surprisingly clear and distinct, with good half tints; and, although we have seen finer photographs, the process is not only a promising but a highly important one, for hereby we obtain permanent solar imprints. Mr. Pouncy was the original discoverer of the carbon process, whereby this permanency of photographs was desiderated; so that his newer process is not a mere accidental hit, but is legitimately based upon his previous successful endeavours in the same direction, and excels them all in interest and importance. We have seen nothing, as yet, to convince us, we may add, that Mr. Pouncy's new process does not stand alone in the recent history of photographic science.

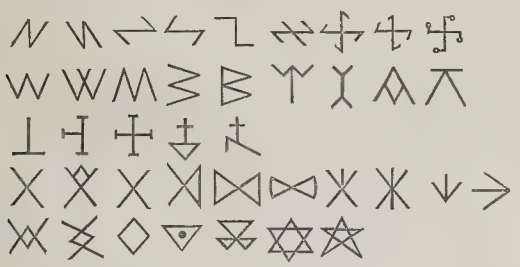
COMPETITION.

The New Public Library in Birkenhead.—The managing committee have chosen their design for a new building to be erected in Hamilton-square. Originally seven sets of drawings were sent in by local architects, which the committee reduced to three, viz.,—Mr. Lewis Hornblower's, Mr. Walter Scott's, and Mr. James Fisher's. The latter was eventually elected by a majority of eight to three votes.

SANITARY CONDITION OF GLASGOW.

The first of a series of quarterly reports by the recently-appointed medical officer, Dr. Gairdner, on the sanitary condition of the city, has been read at the Glasgow Police Board. In this report it is stated that, with one considerable exception, no epidemic disease has prevailed during the quarter to such an extent as to require special sanitary interference. Scarlet fever, measles, and whooping-cough, however, had all been more or less present in the city: cases of smallpox, though not numerous, had presented an evident tendency to increase in numbers; and diphtheria, although not prevailing to any appreciable extent among the poor, had been recognized in private practice with a frequency which demanded attention. The exceptional epidemic disease alluded to is typhus fever, which, whether as regards the number or the severity of the cases, has certainly been prevalent in Glasgow for several months past, to an extent greatly exceeding the average of the last ten years. The disease has been present in all parts of the city, with the exception of the western district, which has been nearly, if not quite, exempt. On the south side of the river, however, beyond the bounds of the Police Act, Govan has furnished no less than thirty-three cases to the Royal Infirmary during the quarter; and many more have been either treated within their own homes, or not reported as under medical treatment. A few fever cases have also been received from Partick, and some from Springburn.

ON GEOMETRICAL AND OTHER SYMBOLS.



The geometrical symbols to which the attention of archæologists and architects was for the first time called by Mr. Godwin, in the *Archæologia* of 1843, are so numerous and diversified; and they comprise so many of the strictly religious or magical and mystical symbols among them; including the hexalpha itself, the pentacle, the tau, the V or Y, and the cross and symbolical N in all their various modifications; that we must look a little closely, if we can, into the true origin and nature of so rich a "find;" although the uses of these symbols, as masons' monographical marks, together with the rules of diversification which seem to have been practised by the working guilds of Freemasons in regard to these uses, have probably rendered such of the symbols as we cannot otherwise identify with those more strictly confined to mystical or magical ideas, of not very definite or unquestionable religious signification. There are quite enough of identifiable symbols and common principles of religious and magical symbolism in them, however, and more than enough, to justify a little close scrutiny as to the purposes and pretensions of that Freemasonry with which they are so intimately connected, and by means of a little knowledge of which pretensions and purposes we may be enabled to arrive at some definite idea of the original meaning of many of the symbols thus used as mason-marks.

In the first of the two letters to Sir Henry Ellis in the *Archæologia* for 1843 (vol. xxx.), to which I alluded at the close of my last communication, Mr. Godwin says:—

"About three years ago my attention was first drawn to the fact, that the stones both inside and outside numerous ancient buildings in England, bore, in many cases, a peculiar mark or symbol, which was evidently the work of the original builders. It immediately occurred to me that these marks, if extensively examined and compared, might serve to aid in connecting, and perhaps discriminating, the various bands of operatives who, under the protection of the Church, mystically united, spread themselves over Europe during the Middle Ages, and are known as the Free-Masons.

It, therefore, gave me some pleasure, during a recent visit to the interior of France, to observe, in several instances, at Poitiers, in the department of Vienne, similar marks, in great profusion; the more so, too, as, amongst them, were many exactly resembling some which I had previously found in England, although on buildings of a different date."

Some of these marks, both from English and French buildings, are then given; and from these, together with those afterwards contributed along with the second letter, I have made the following small selection, placed in a kind of affinitive, though necessarily not very consecutive, order of succession, and to which selection I shall have occasion hereafter to refer.

MASONS' MARKS.

Selected from Mr. Godwin's Collection, in the "Archæologia," vol. 30.

"Whether these marks," continues Mr. Godwin, "were made for the simple purpose of identifying the work done by particular individuals or sub-divisions of the band, or that they had a deeper signification and motive, I will not now inquire, nor even venture to remark on the origin of the signs themselves *per se*. My present purpose is simply to draw attention to these marks, in the hope that collections may be made in England, France, and Germany, so that they may be properly investigated and compared. No circumstance which promises to throw even the smallest light on the early history of those wonderful men to whom we are indebted for so many magnificent buildings can be deemed insignificant or unworthy of consideration."

One chief object of the letters related to the more strictly professional question of periods of architecture, and the relationship of the mason-marks to these as well as to the original builders of the edifices so marked, or the schools or lodges of masons who used them; but into this more strictly professional question I need not presume to enter. Although my present communications, however, may not "aid in elucidating the *history* of the Freemasons," as Mr. Godwin desired, they will, I hope, assist in giving us such a definite idea of their *tenets* and *pretensions* as shall contribute a little light of its own peculiar kind upon the original and general meaning of the geometrical and other symbols of which it is my object to treat.

In his second letter to Sir H. Ellis, the author points attention to certain notable customs as to tribrism and crosses which seemed to have a connexion with the subject of mason-marks: he then goes on to say, as to the general subject under notice,—

"The marks of which we are especially speaking, it can, perhaps, hardly be doubted, were made chiefly to distinguish the work of different individuals. At the present time, the man who works a stone, being different from the man who sets it, makes his mark on the bed or other internal face of it, so that it may be identified. The fact, however, that in the ancient buildings it is only a certain number of the stones which bear symbols—that the marks found in different countries, although the variety is great, are in many cases identical, and in all have a singular accordance in character—seems to show that the men who employed them did so by system; and that the system, if not the same in England, Germany, and France, was closely analogous in one country to that of the others.

Moreover, *many of the signs are evidently religious and symbolical, and agree fully with our notions of the body of men known as the Freemasons.*"

With reference to "the religious character of associated masons in early times," a curious circumstance is adduced in this letter from one of the Arundel MSS. in the British Museum, described as "*Sanctorum Vitæ, Miracula, et Martyria.*" At folio 218 is a narrative of four men "wonderful in the art of Masonry," who always "worked in the name of the Lord," after prayer and signing with the Cross; and whose skill, when employed by the Emperor Diocletian to carve some columns with foliated capitals out of a porphyritic mountain, was so marvellous as to excite not only the envy but the astonishment of "the philosophers," who attributed their skill to the "mysterious words" of "art-magical."

In the conclusion of the second letter, allusion is made to marks—apparently analogous to those of the Freemasons—on the faces of a monument at Baalbec, referred to in Lord Lindsay's work on Egypt.

These letters in the *Archæologia* contain other and cognate matter, especially with relation to the symbolical N, to which I must return, as well as to the other mason-marks; but, in the meantime, I may note some farther particulars, subsequently recorded, as to mason-marks, in the *Archæologia*.

Following up the interesting subject started by Mr. Godwin, there appeared in the *Archæologia* for 1852 a paper by Mr. Patrick Chalmers, F.S.A., with new examples of mason-marks: these were from Scotland, which has for centuries been a great stronghold and school of Freemasonry. In writing on the origin and use of mason-marks, this gentleman says:—

"These marks, in all probability, had their origin before the Christian era; and this would indeed be placed beyond all doubt if the marks observed by Colonel Howard Vyse and others, on stones in the pyramids of Egypt, were mason-marks, and not quarry-marks, as in some instances he has proved them to be; or if he could identify the secret societies of Egypt with those of Freemasonry as has been attempted. It is only reasonable to suppose that *mason-marks have been modified by and added to symbols connected with or illustrative of, facts and doctrines of the Christian faith.* A quarter of a century has barely elapsed since the rule that each mason should have his distinctive mark, and should affix it to every stone hewn by him, was strictly enforced in the district I have referred to (Scotland); and even now, when many men are collected together on a work, the rule is observed, though not with so much strictness. It was a law in St. Ninian's Lodge, at Brechin, that every mason should register his mark in a book, and he could not change that mark at pleasure."

In a paper on Mason-marks in Ireland, read before the Kilkenny Archæological Society, Mr. E. Fitzgerald, architect, who also follows up the subject started in the *Archæologia* (but, by the way, without acknowledgment except of Mr. Chalmers's paper in the volume for 1852), remarks, on the quotation just given, that,—

"The rule given by the Craft for the formation of the marks is, that they shall have at least one angle; that the circle must be avoided, and cannot be a true mason's mark unless in combination with some line that shall form an angle with it; that there is no distinction of ranks; that is, that there is no particular class of marks set apart for and assigned to master-masons as distinguished from their workmen: if it should happen that two masons, meeting at the same work from distant parts, should have the same mark; then one must, for a time, assume a different distinction; or, as heralds say, 'a difference.'"

He thinks that probably Mr. Chalmers was not aware that the system of mason-marks is still carried out in several parts of England among the operative stone-cutters, though not in connexion with the "Free and Accepted Masons;" as he was shown, in 1857, at Lismore, several stones, imported from England into Ireland, for the "Carlisle Tower," which were cut with mason-marks; and Mr. Brown, the Duke of Devonshire's architect, informed him that he had a book with hundreds of marks in it, and with the masons' and stone-cutters' names attached to them; and that, as a new hand or craftsman was put on a job, he added an additional nick, or score, to his master's or foreman's; so that, at once, every man's work was known by his mark.

As already said, I have no intention to inquire into the origin or history of Freemasonry itself, although I cannot well avoid looking a little into the mystical and doctrinal principles involved in the Freemasonic symbols, phrases, and allegories; but I may quote a brief passage from an ancient MS., given in the "Encyclopædia Londinensis;" as, in this veracious document, our old heathen friend Nimrod, the "mighty hunter before the Lord" (or rather, perhaps, the mighty seeker after the Lord the oracular Spirit, or "the oracles of God"), unexpectedly turns up in a highly-distinguished position, at the laying of the very foundation stones of Freemasonry itself:—

"The kinge of Babylon that height Nemrothe was a mason himselfe, and loved well the science, as it is said with [Freemasonic?] masters of histories. And when the citty of Nyneve, and other citties of the East should be made, Nemrothe, the king of Babylon, sent thither threescore masons at the rogation of the king of Nyneve, his cozen .....and this was the first tyme that ever mason had any charge of his science."

Perhaps the historical tile-tablets of Babylon may yet corroborate this very explicit account of the origin of Freemasonry. Meantime, there is little difficulty in discovering the foundation for the story itself in the following Scriptural passage, Genesis x. 8, "And Cush begat Nimrod: he began to be a mighty one in the earth. He was a mighty hunter before the Lord: wherefore *it is said*, Even as Nimrod the mighty hunter before the Lord [a very singular thing (for the heathen?) to say of a heathen; did we not recollect that Babylonia, or at least Chaldea, was the native country of Abram, the "father" of the Jews, as of all "the faithful;" and that the Chaldeans were magicians, as Nimrod himself was; and as, in after times, the Jewish prophet Daniel, the Grand Master of the Babylonian and Chaldean Magicians, also was; being full of "the Spirit of the holy gods," as Nebuchadnezzar the king himself admitted when he somewhat unreasonably commanded Daniel to tell him "the visions of the dream" he had himself forgotten]. And the beginning of his kingdom was Babel, and Erech, and Accad, and Calneh, in the land of Shinar. *Out of that land went forth Asshur, and builded Nineveh*, and the city Rehoboth, and Calah, and Resen, between Nineveh and Calah: the same is a great city."

Freemasons were of two distinct orders,—those of the leather aprons and those of the silk; or in other words, the working guilds and the mystical masons. So far as the brethren of the working guilds were more than mere craftsmen, they were of the mystical order, or associates of the nominal masons or "symbolical philosophers;" but it seems probable that, at one time, all Free-

masons were craftsmen; and those who were not so may have been afterwards introduced as honorary members, just as we have even the Prince of Wales made an honorary Fishmonger or an honorary Tailor by the City guilds of London. If so, however, the honorary class amongst the Freemasons appear to have at last completely swamped and ousted the modest craftsmen. But however this may be, that the craft and mystery of Freemasonry was of old especially connected with church or temple building, there can be no doubt; and neither can there be any that they allegorized the temple-building process: hence the mystical use of Solomon's temple and its builder.

Now the true temple, or church, of God is the human body itself: "What! know you not that your body is the temple?"—the "temple of the Lord,"—of "the Lord *for the body*,"—the "temple of the Holy Ghost,"—the "temple of God." And a church or temple, built and completed, or perfected, is therefore the human body brought to perfection, physical as well as mental, and illuminated by "the Light" of the Holy Spirit, shining within and upon it, as "a crown of glory" on its head. We can see, therefore, how, as is alleged, Freemasonry, though at one time essentially a church-building community of working masons, may have, quite relevantly, had secret and allegorical reference to religious or mystical doctrine relating to human perfectibility and reparadisement.

Thus we find it maintained, in an "Essai sur les Mystères, et le véritable Objet, de la Confrerie des Francs-Maçons," published at Amsterdam, as a second edition, 1774, that the end and purpose of Freemasonry is the

"*Restoring* to man his *primitive goodness* [in Paradise where he was perfected by the "creation" of the angelic "woman" out of "the man," and so made "very good"], and causing a revival in his heart of the laws of [his] nature in their *greatest perfection*. religion had the same end in view: . . . . it is *Freemasonry alone* which has understood *the best means* of accomplishing it."

And, in the same Essay, it is declared that the "allegory of Freemasonry" is this:—they propose to build a temple: the instruments of this building are symbols of the architecture of the heart,—the square, the triangle, the compass: the work is done "in the light"; and before being introduced or initiated into this glorious work, or made fit to work in and at this august temple, man is a wretch who *wanders in darkness*; and he must be cleansed and *purified*. "All Freemasons," we are also told, "are not capable of developing this allegory": I should rather think so! "The well-informed mason knows," however, "that the jewels, as they are emphatically called, of the Lodge, are only *ensigns of the inward man*." The line, says "brother" Jleans, in an old "oration" at Southampton, "points out the direct but narrow path which leads to a *glorious immortality*" [a physical or natural immortality on the face of this earth, with the re-enjoyment of Paradise, or celestial glory, as could easily be shown]. The "rough ashlar" is "the brute stone, without shape or form, as taken from the quarry; and is emblematic of the mind of man in its pristine state, rude and unfashioned like that stone." The "smooth or perfect ashlar" is "a polished stone, of a *true die square*, which has *undergone the skill of the experienced mason* [as a hierophant of the mysteries], and is emblematic of the mind of man in its *improved* state", and so on. Again, "Freemasonry deals in hieroglyphics, symbols, allegories; and to be qualified to reveal their meaning a man must know more than a mere nominal mason. The full interpretation of them, *like that of the mysteries of old*, is in select hands,—has been committed only to those of tried fidelity, who conceal it with suitable care; and those—if not deficient in intellect yet—wanting in industry or inclination to *explore the penetralia of the temple* are not qualified, if willing, to betray it: hence the secrecy which has so long distinguished the fraternity."

Freemasonry, then, was probably meant, in its secret rites of initiation, mystically to show forth *how* the human frame may be built up, finished, and perfected, as the true temple of the actual Lord and Master of it, who is not the human soul or the man himself,—erroneously conceived to be its master; but the divine Spirit, who, in the perfected and finished state of his temple, as it was in its "primitive goodness," shall illuminate it from within,—as the penetralia of the temple shone solely by the inward "Light" of the Divine glory."

Highly initiated Freemasons admit, and indeed they urge and insist, that Freemasonry is essentially identical with the ancient religious mysteries, and with the Rosicrucian philosophy. There is, doubtless, in all this, too, a good deal of the "divine dark," no less than in Freemasonry; but let us try if we cannot get at least a glimpse of what is known as to these ancient mysteries.

For brevity's sake, I must give as condensed an idea of the professed object of the mysteries as possible; and, in doing so, prefer quoting at second hand, as it were, from others who have already given condensed ideas of these mysteries; and from a point of view altogether different from my own preconceived ideas.

Thus, in a paper on "The Buddhist Emblem of Architecture," in vol. xiv., p. 633, of *The Asiatic Journal* of Bengal, Captain T. Latter says:—

"In all these mysteries, which were held in such high veneration by the ancients, and the types of which have descended in a chain of unbroken succession even to our own days, the attainment of *the crowning point* of the craft was *typical of* DEATH. It was alone by passing through the vale of *its shadow* that *perfect* LIGHT could be obtained." Apuleius, in the 11th book of his *Metamorphosis*, or Fable of the Golden Ass, describes minutely this *completion* of *initiation*,—the night-like darkness, the approach to the confines of Death; and then, in the very midst of this darkness, the Light revealed to him [and in fact *in him*]. In some of the various versions of these mysteries it is said that the candidate was shrouded in the shudder-cloth of death; was placed in the narrow home to which we all must go; was *raised again*, and went forth the *new born and perfect craftsman* [the *antitype* of an immortal life, "new every morning" after "dying daily"]. In others it was represented by the candidate passing through *an oval*, symbolizing that, as he entered this scene of woe, so must he go forth again. Thus was it that we find Death styled in ancient writ, the portal of life."

That the death here alluded to or signified was not the death of corruption, as this writer may perhaps have thought it was, there is abundant proof; as, for example, where Apuleius himself, speaking of the Goddess Ceres or Isis, the great nurse-mother "of a thousand names," says;—"The gates of the realms beneath, and the guardianship of life, are placed in the hands of the goddess; and the initiation into her mysteries is celebrated as bearing a close *resemblance to a voluntary* death, with a precarious *chance of recovery*.....whom, through her providence, being *after a manner born again*, she *restores* to the career of a *new existence*."

"The sage Isocrates," says Warburton, while speaking of the mysteries and night vigils of Eleusis, "called the mysteries *the thing human nature principally stands in need of*.... indeed the Greeks seem to have placed *their chief happiness* in them: so Euripides makes Hercules say, I WAS BLEST when I got *a sight* of the mysteries; and it was a proverbial speech, when any one thought himself *in the highest degree happy* [in an ecstacy of entrancement, in short] to say, I seem as if I had been initiated in the higher mysteries. The primitive Christians, in imitation perhaps of these Pagan rites, or from the same kind of spirit, had a custom of celebrating *vigils in the night*."

These ideas of the *summum bonum* or "highest good" of man remind me of the less ancient doctrines ascribed to certain mystics whom a writer (believed to be Defoe), in a work on the history of magic, stigmatises as magicians. He is very virulent against the "effluvia of hell," as he calls them, but seems pretty fairly to describe the views he reprobates.

"Now magic," he says, "puts an end to all difficulty. By consulting *the dark oracle* and entering a little into *the secrets of the sacred science*, as they wickedly tell you it is, *they come out transformed into a new kind of species* [a higher development of humanity, doubtless]: they tell you that they are arrived to a complete *knowledge of the eternal mysteries*,—that God is nothing but *the sum of human desires, the century of an exalted Spirit carried up into the regions of eternal calm and quiet, where the Soul is in raptures of joy and love*." This they receive, by *the Light* of the refined supreme judgment, to be *the perfection of happiness*, and that is God. Amor Deus est; Jupiter quodcunque cupis."

Of the Rosicrucian Philosophy, perhaps all I need here do is, for want of a better, to quote my own brief condensation, from the Paper on Symbols in the *Builder* of 15th January, 1859.

"The Rosicrucians taught that there are two kinds of life, 'the compound life' and 'the elementary life.' The compound is the human or *Soul* life. The elementary is the Sylphide or *Spirit*-life. It was the duty of the sages, *by fasting, watching, prayer, and contemplation*, to bring about 'a Rosicrucian *marriage*' with the elementary or Spirit-life. That life was the companion and bride of man (the compound life) in Paradise; and the desertion of that his Spirit bride constituted the very fall of man itself. The grand purpose of the brethren of 'the *Rosy Cross*' was, by help of the Spirit-life, to bring about the entire *regeneration* and the *perfection* and salvation or *immortalization* of man, in body and soul and spirit. As in the Eleusinian initiation, 'science, genius, and immortality' were to be the fruits of the glorious alliance which the sages sought. By the help of their Spiritual brides, they could penetrate into all the secrets of nature, and 'see into the life of things;' and this accords with what the Taliesin says of the Druidical god life."

We may now have some idea of what the Freemasons mean when they speak of the similarity of their initiations to those of the ancient mysteries, and shall now be better able to indicate what such symbols as the hexalpha, used as one of their most precious jewels, must have been originally meant by them, as well as by many others, to signify.

I fear, however, that I must postpone any further remarks on the Freemasonic and other geometrical symbols, if you will allow me, to another communication.

J. E. DOVE.

* "In the *shadow* of Death *Light* will spring up." A dread reality, and h s shadow are "Death and his brother sleep." The LORD "turneth the shadow of death into *the morning*."—Amos v. 8.

THE CORONATION CHAIR, WESTMINSTER ABBEY.

ALLUSION was recently made in the *Builder* to the coronation stone set within the ancient chair which is now preserved near Edward the Confessor's shrine in Westminster Abbey. The traditionary history of this stone is remarkable, but it is only traditionary. It has been known as the "prophetic" or "fatal" stone, which tradition asserts is the same whereon Jacob rested his head when he saw the vision of the ladder reaching to Heaven, with the angels of God ascending and descending in the Plain of Luz. From various sources we have evidence of the great antiquity of the practice of crowning kings on an elevated stone or by a pillar; and the custom may still be said to form part of the coronation ceremonies of our own country. Besides the stone in Westminster Abbey, there still remains the stone at Kingston-upon-Thames, on which several of the ancient kings of England were crowned.

The Scriptures show that the Jewish patriarchs erected stone pillars on different occasions, but chiefly from religious motives; and that these monuments were at subsequent periods dedicated to the most important national purposes, particularly to the creation of kings. The stone which Jacob had made his pillow, he afterwards set up as a pillar, and poured oil upon the top of it, saying, "And this stone, which I have set for a pillar, shall be God's house." He also changed the name of the place from Luz to that of Beth-el.

He likewise set up a stone for a pillar at Galeed Mizpah, on the spot where he entered into a lasting covenant with Laban; and at that spot Jephtha was solemnly vested with the government of Gilead. At the stone which Joshua had set up, Abimelech was made king. Adonijah usurped his brother's crown, and held a feast at the stone of Zobeleth; and Jehoash was crowned and anointed king standing by a pillar, as the manner was. Josiah also stood by a pillar, with all his people, in the Temple at Jerusalem, when he made a solemn covenant to keep the ordinances of the Lord.*

It is probable that the custom of inaugurating kings by placing them either upon or near an elevated stone spread extensively through the East, as it certainly did from thence to the Celtic and Scandinavian nations. The Persians had their "artioze" or "fatal" stone, the use of which with them was to point out the most deserving candidate for the throne. Amongst the Norwegians, Swedes, and Danes, the practice was to form a circle of stones, commonly about twelve in number, in the middle of which was set up one larger than the others. This was the royal seat, the nobles occupying those surrounding it, the people standing without. Here the leading men of the kingdom gave their suffrages, and placed the elected king on his throne. Monuments of this kind remain in Denmark, and traces of them may be found in Shetland, the Hebrides, Isle of Man, and elsewhere.

A rude enthronement, somewhat similar to that of the Northmen, is to be found among the Celtic tribes; and the kings of both Scotland and Ireland were placed upon a stone at the time of their election. The consecration of peculiar rocks and stones formed a branch of Druidical superstition, and the votaries of Druidism were taught to believe that there was great virtue in stones thus hallowed. "The stone of power" was a flat stone, usually black, which the Druidical priests were said to "consult:" probably they slept upon it, like Jacob, and had what they regarded as celestial and oracular visions for their guidance. The Arch-Druids, too, sat in a stone chair, to which they attributed wonderful virtues, and which appears to have partaken of the nature of a bishop's throne. They spoke mystically of "awakening" the chair of the Taliesin at Caer Sidi, and declared that he who sat in it would suffer neither disease nor decay; but become one of the "twice-

* The etymology of the word "Column," is an interesting and curious subject, with reference to the ancient "Columbs" or oracles.

born" and "deathless brotherhood." It is conjectured that the stone below the coronation chair may have been Druidical. There were formerly some rhymes current in Ireland which imply that the Scotch, although of legitimate descent, would fail to preserve regal power unless in possession of the Fatal Stone.

From Fordun's account of the Coronation Stone we gather some particulars respecting its legendary history. There was a certain king of Spain, of the Scottish race, called Milo, who had many sons: one, however, named Brek, he loved beyond all the others, although he was neither the eldest nor the heir. He therefore sent him to Ireland with an army, and gave him a marble chair, carved with very ancient art by a skilful workman, in which the kings of Spain of the Scottish nation were wont to sit when inaugurated. This Simon Brek having reached the above island with a great army, reduced it under his dominion, and reigned in it many years. He placed the stone or chair at Themor, the royal residence, a noted place at which his successors were accustomed to reside. Gathelus, as some say, brought this chair, with other regal matters, with him from Egypt into Spain: others relate that Brek, having anchored on the Irish coast, was forced by contrary winds to withdraw his anchor from the surge; and whilst labouring to that end, a stone in the form of a chair of marble was hauled up by the anchors of the ship. Receiving this as a presage of future success and dominion, he was exceedingly joyful, and it was then prophesied that he and his posterity should reign wherever this stone was found.

In Hollinshed's Chronicle there is a long account of this Gathelus, who is there said to have been a Greek, the son of Cecrops, who built the city of Athens. After leaving Greece, Gathelus resided some time in Egypt, when he married Scota, the daughter of King Pharaoh; but being alarmed by the judgments denounced by Moses, who was then in Egypt, he quitted that country, and landed in Spain, where he built a city, which he called Brigantia. When he sat upon his marble stone, he gave laws and administered justice to his people. This stone was in fashion like a seat or chair, having such a fatal destiny, as the Scotch say, following it, that, wherever it should be placed, there should the Scottish men reign and have supreme governance. "Hereof it came to pass, that first in Spain, after in Ireland, the kings which ruled over the Scottish men received the crown upon that chair until the reign of Robert the First, king of Scotland."

There are several ancient rhymes connected with this; amongst them the following:—

"King Edward wyth the lang shankes from Scotland he fette.
Beseyde the shryne of Seynt Edward at Westminster he hitte sette."

The Irish name for this stone was generally the "Fatal Stone:" sometimes, however, it was called the "Stone of Fortune." Its place, when in Ireland, was the Hill of Tarah; and for some ages the kings of that country were crowned upon it there. Sir J. Ware, in his account of the relic, states that the Irish historians say it was brought by the colony of the *Tuath de Danans* into their country, where it was regarded as an enchanted stone, and reputed to have a peculiar quality; namely, that when any of the Royal Scythian race placed themselves on it to be crowned, it made a terrible noise resembling thunder; but if the king elect were a pretender, the stone was silent; and tradition reports that in the times of heathenism, before the birth of Christ, he only was crowned monarch of Ireland under whom, when placed upon it, the stone "groaned or spoke." In the reign of Morietach Mac Ere, it was sent to his brother Fergus, first king of Scotland, who was descended from the blood-royal of Ireland; and he had it placed in Argyle, where it continued until the reign of King Kenneth II., who A.D. 840, having vanquished the Picts, near Scone, enclosed the stone in a wooden chair, and deposited it in the monastery there, to serve for the inauguration of the kings of Scotland. According to Pennant, its station, when in Argyleshire, was the Castle of Dunstaffnage; and in his Tour in Scotland, he has given an engraving of an ivory image, found in the ruins of that castle, which represents a king sitting, as he supposes, in the ancient chair, in whose bottom was the fatal stone. The shape of this chair is very different from that in Westminster Abbey; and if, we may judge rightly from his carving, it was of great antiquity.

Bishop Leslie, who wrote his account of Scottish events early in the reign of Queen Elizabeth, states that Kenneth removed the *marble chair* from Argyle to Scone, and willed that the future kings should be inaugurated sitting on that chair. Hollinshed narrates the facts of this removal more particularly. "King Kenneth," he says, "haveing destroyed the Pictish kingdom, caused the marble stone (which Simon Brek sometime brought out of Spaine into Ireland), and the first Fergus out of Ireland into Albion, to be brought now forth of Argyle, where, till that time, it had been diligentlie kept, into Gowrie; which region before apperteined to the Picts; there to remaine from thenceforth as a sacred token for the establishment of the Scotish kingdome in that countrie. He placed it at Scone upon a raised seat, on a plot of ground there, bicause that the last battell which he had with the Picts was fought neare vnto the same place." Buchanan, in his History of Scotland, gives an account of the coronation stone, which is very similar to the above; but says, in addition, that the kings of Scotland were wont to receive both the regal title and the insignia sitting on that chair, till the days of Edward I. king of England; and Chalmers asserts that the last of the Scottish kings who was crowned on that seat was Alexander III. Hardyng, however, whose chronicle was partly composed in Henry VI.'s reign (and with whom on this point several ancient historians agree), speaking of John Baliol, affirms that he was crowned—

"In the Minster of Scone, within Scotlãd groũd,
Sittyng upon the *regal stone* full sound,
As all the Kynges then vsed had sfore
On Sainct Andrewes day, with al joye therfore."

In April, 1296, Edward I., having formed a league with Bruce, defeated John Baliol in a great battle near Dunbar. Afterwards Edward, wishing to deprive the Scottish nation of every vestige of its independence, caused the crown, sceptre, and inauguration stone, with all the public jewels, archives, charters, &c., to be conveyed to London as memorials of his conquest and the subjugation of the Scots.

In the wardrobe account of Edward I., under the heading "Jewels remaining at the End of the Twenty-seventh Year, of those which were sometime the King of Scotland's, found in the Castle of Edinburgh," mention is made of a large enamelled silver cup, and a great stone on which the kings of Scotland were wont to be crowned. It would seem by this that the coronation-stone was at any rate for a time deposited in Edinburgh. Most historians, however, agree that Edward carried the stone from Scone to London. Respecting this, Hemingford says:—"In the church at the monastery of Scone, near the high altar, there was a very antient stone, made indeed concave like a rude chair, wherein the future kings were seated as customary in the place of coronation. This stone Edward I., in returning through Scone, commanded to be taken away and carried to London." Knighton gives similar testimony; and Walsingham says that Edward, in returning by the Abbey at Scone, took from thence the stone which the kings of Scotland were wont to use for a throne at the coronation; and brought it to Westminster, and ordered it thenceforth to be made the chair of the officiating priest. Another authority, who has evidently gathered his information from the last-named writer, says:—

"And as he came homeward by Skone away,
The Regal stone of Scotland then he brought
And sent it forth to Westminster for ay
To be there in a cheire cleanly wrought,
Which then was standyng beside the shryne
In a cheire of olde tyme made full fyne."

Matthew of Westminster informs us [date 1297] that the king coming to Westminster, on the morning of St. Botolph, offered to the blessed King Edward the regalia of the Scottish kingdom, viz., the throne, the golden sceptre, and the crown.

Rapin, the historian, after alluding to the intention of King Edward to unite the two kingdoms, and the removal into England of the Scottish regalia and famous inauguration stone, says, "The people of Scotland have all along placed in that stone a kind of fatality: they fancied that while it remained in their country the state would remain unshaken; but the moment it should be elsewhere removed, great revolutions would ensue; and for this reason Edward carried it away,—to create in the Scots a belief that the dissolution of their monarchy had come, and to lessen their hopes of obtaining their liberty."

Of such import was this stone, that it was not only made a separate article in a treaty of peace, but also of political conference between Edward III. and David II., king of Scotland. A writ of Privy Council, of July 1st, 1328, is in existence, signed by the king and directed to the Abbot and Convent of Westminster, wherein Edward III., after reciting that the stone whereon the kings of Scotland used to sit, at the time of their coronation, and which was then in the keeping of that abbot, &c., should be sent to Scotland; and that he had ordered the Sheriffs of London to receive the same from them by indenture, and cause it to be delivered to the queen mother: notwithstanding this command, it is clear that the coronation-stone was never given up, although many ancient records, jewels, and monuments, were actually delivered to the Scotch.

The ancient prophetic distich relating to this stone is said to have been cut in or engraven on it by command of king Kenneth; but this is in all probability erroneous; for, so far as we are able to discover, there are no traces of any inscription; and, with the exception of a small cross, there is no mark upon this stone: there is, however, a rectangular groove or indent, in which an inscription might at one time have been fixed.

The coronation-stone is placed within the framework of the chair, which is now in the Confessor's Chapel: at each end is a circular iron handle, affixed to a staple within the stone itself, so that it might be lifted up.

On referring to the notes above given, it will be seen that in some respects the ancient accounts of the stone do not agree with its present appearance. We have it described as a "white marble stone," and in some instances as being richly carved by a cunning artist: notwithstanding, it is in reality a dun-coloured, common-looking stone, like some of those which are brought for various purposes from Dundee, in Scotland. It is a sandy granular stone, chiefly quartz, with light and reddish coloured felspar, and also light and dark mica, with some other matters intermixed; and on the upper side there is a dark, brownish coloured flint pebble, which, from its hardness, has not been cut through, though immediately crossed by the indent above mentioned. The stone is of oblong but irregular form, measuring 26 inches in length, 16¾ inches in breadth, and 10 inches in thickness.

In the wardrobe accounts of Edward I.'s time there is a charge by Master Walter, the painter, for the costs and expenses incurred by him for making one step at the foot of the *new chair* (in which is the stone from Scotland), set up near the altar in St. Edward's shrine in the Abbatial Church at Westminster, in pursuance with the order of the king, and for the wages of the carpenter and painter for painting the said, together with making a case for covering the chair. The cost of this was 1*l.* 19*s.* 7*d.*

A VISIT TO THE BIRKENHEAD DOCK WORKS.

On Saturday afternoon last about fifty of the members of the Liverpool Architectural and Archæological Society paid a visit to the Birkenhead Dock works. They were received by Mr. J. Justen, from the department of the dock engineer, Mr. Lyster.

It is not our intention to enter upon an elaborate description of the great estate of the Mersey Docks and Harbour Board at Birkenhead, but it may interest our readers if we note a few facts in reference to the gigantic dock works on the Cheshire side of the Mersey—works extending over an area of 121 acres and 2,869 yards, and of a money value of more than four millions sterling. The quay space at Birkenhead is between five and six miles in extent: at Liverpool it is nearly seventeen miles, whilst at the latter place also the dock space is about 250 acres. The Liverpool Dock Estate covers about 810 acres, of which about 220 are yet unappropriated, and the Birkenhead Estate about 450 acres. So much for the contrast of the two estates in point of area. The extent to which the Liverpool docks are used is well known; in fact, they are over-crowded at times. The Birkenhead have yet to be tested.

The members on landing forthwith proceeded to the reclaimed portion of the Woodside basin, at the west end of which a quarry has been opened, and excellent red sandstone is being obtained, and used for building the walls of the half-tide dock and great northern entrances near Seacombe. One of Taylor's travelling steam cranes was in use for hoisting and placing the stone on the trucks, and the visitors were much struck by the economy of labour consequent upon the employment of this piece of machinery. The next point of interest visited was the Morpeth Dock, which at present contains less than four acres of water space. The enlargement is to the extent of seven acres, and consists of a cut to the south-eastward—already finished—bringing the extreme end of the dock close to the river wall, and pointing to the north-east corner of the Albert Dock Warehouses. The present entrance to the Morpeth Dock—a very

shaky one—is only 50 feet in width, and the sill is but 5 feet below the old dock datum. The new lock, which is nearly completed, has an entrance of 85 feet. The sill is to be 12 feet below the old dock datum, and the lock has been so constructed that, in case of necessity, the water may be pumped out, and ships of the *Warrior* class admitted to use it as a graving dock.

After having inspected the huge mortar-mills where the mortar used in the construction of this portion of the works is ground, the visitors proceeded to one of the principal works on the estate—a work which has cost a very large amount of money in constructing, and no small degree of anxiety on the part of Mr. John Hartley, the designer, and his successor, Mr. Lyster. The great low-water basin was designed to receive ships at all states of the tide; and we believe that, at low water of the lowest tide in the year, it is calculated there will be a depth of 12 feet of water. The area of this basin is about 14 acres. Its form is that of a parallelogram, 1,600 feet in length, 300 feet wide at the mouth and 400 feet at the top, and 47 feet deep. On the quay of the basin was a considerable quantity of timber—the remains of forest trees—which had been found in an upright position at a depth of 36 feet from the surface, whilst the excavations were in progress. This timber was examined by several gentlemen, who pronounced it be oak and pine. The possibility of keeping the great low-water basin from silting up is the greatest problem of the Birkenhead Dock works. Mr. John Hartley devoted his best energies to the consideration of the subject, and devised a plan for sluicing, which, in regard to its power and the wonderful means adopted to attain the desired end, is remarkable. Should the plan answer its purpose, a problem of more than ordinary difficulty will have been solved, and Mr. Hartley will have added another laurel to his fame. The excavation of the basin was commenced by Mr. M'Cormick in October, 1858, but the work was greatly retarded by the innumerable springs met with; and to prevent flooding, powerful steam-pumps were kept at work night and day. Mr. Hartley found the foundations of the north wall tolerably good, whilst those of the south were described by him in one of his annual reports to the Mersey Docks and Harbour Board as "exceedingly bad," and they had to be prepared for the reception of the ponderous masses of masonry which form the wall by driving "bearing" and "sheeting piles"—a tedious and expensive process. To enable the walls to be turned so as to join the river wall north and south of the entrance, an immense coffer-dam had to be constructed; and the work, which was commenced in January, 1858, was expected to have been finished by the end of the year. But here, again, the demon of Birkenhead was at work. "Timber, timber, timber, and yet more timber," went into "the bottomless pit," and still the coffer-dam was far from completion. In truth, the density of the quicksand at the south end was so great that pile after pile went, and it was years instead of months before the dam was perfected. We believe some of the piles were not less than 65 feet in length.

The unfortunate coffer-dam was particularly examined, and subsequently the party proceeded to the bottom of the upper end of the great low-water basin. In the centre is a 50-feet lock for the purpose of admitting vessels into the Great Float; and on either side of the lock are ten apertures, through which a portion of the tidal waters received into the float at high-water will be released; and, it is hoped, with such a force, that the basin shall be prevented from silting up. The scour will be marvellous, no doubt; but there was amongst the visitors some apprehension that dredging will have to be resorted to. With a moderate steop one was able to pass through the outer aperture or mouth of the sluice; and, after proceeding for a couple of yards or so, the visitor found himself in a passage about 15 feet long, 7 feet high, and 4 feet broad. This opened into a vast semi-circular chamber, illuminated with torches and successive blue and red lights, in the centre of which was a lofty arched vault, leading to a pair of 30-feet gates. These, when opened, will admit the water from the Great Float for sluicing purposes. The outlets are twenty in number, each worked by hydraulic machinery of 50 tons pressure; and it is estimated that at an ordinary 18 feet tide about 28 millions of cubic feet of water, equivalent to a fall of 3 feet in the height of the water over the area of the Great Float, will be emitted by the sluices. The great northern entrances are between Seacombe and the low-water basin. The principal one is to the north, and is 100 feet wide: in the centre is a 50-feet entrance, and that to the south is 30 feet. The three entrances meet in a half-tide dock of about 8 acres; and at its east end three other locks of equal width will admit ships into the East Float, from whence they may pass to the West or Upper Float. Some astonishment was excited by the announcement that the walls of the half-tide dock were being built 42 feet in thickness; but this is rendered necessary in consequence of the construction of two enormous culverts, at the base of the walls, for the purpose of carrying water for sluicing purposes at the river entrance. The hydraulic tower between the north entrances, the low-water basin, and the east float, has just been completed; and the powerful machinery, by Sir William Armstrong & Co., of the Elswick Foundry, properly fitted and ready for work. The gates of the various entrances and the clowes, &c., will be opened and shut by hydraulic power. The Eastern Float is connected with the Western Float by a passage 100 feet in width. The depth of the floats is 35 feet, their area 111 acres, the easternmost being 59 acres and the westernmost 52 acres. On the south side of the latter the Dock Board are constructing two graving docks, and coal tips, &c., have been erected for the coal trade at the expense of some thousands of pounds, but comparatively unused by that trade as yet, for a reason best known to the coalowners and others.

At the close of the meeting, the president called attention to the day's proceedings, and returned a vote of thanks to Mr. Lyster for the permission granted to the Society to inspect the docks; and referred also to the services rendered by Mr. J. Josten whilst conducting them over the works. Mr. Josten, in reply, ascribed the success of the proceedings to the assistance rendered by Mr. G. Biddle, the surveyor of the estate; to Mr. Pringle, the foreman of the hydraulic works; and no less to the superintendent of the chain test works, Mr. J. McDonald.

PROPOSED MEMORIAL OF THE LATE PRINCE CONSORT.

IN order that the views with which Mr. Scott prepared his design for the Memorial proper may be fairly set forth, we print the statement with which he accompanied the drawings:—

"I would take the liberty of remarking at the outset, that I have felt a great perplexity as to the scale of outlay to which I should proportion my conceptions. From the time of the very first proposal of the Memorial, my thoughts were almost constantly directed to the subject. The claims of that great and good Prince who was to be commemorated; the magnificence of the scale on which the public had from the first,—and most justly,—framed their ideas as to what the memorial to such a personage should be; and her Majesty's choice, in the first instance, of a monolith, greater than any that the world had seen, surrounded by magnificent groups of sculpture in due proportion to its colossal magnitude: all these rendered it impossible for me deliberately to strike out a thought on an unworthy scale, while the converse seemed equally impossible. It might, indeed, be almost said of an artist who is strongly impressed with the worthiness of a subject such as this, that

> 'Such is the impulse and the spur he feels
> To give it praise proportioned to it's worth,
> That not to attempt it, arduous as he deems
> The labour, were a task more arduous still.'

With such feelings I could not bring myself to treat the subject on the principle of 'nicely calculated less or more.' I had, indeed, already struck out my design before I was honoured with your invitation to do so; and having worked it out (so far as thoughts and sketches went) under a strong impulse to do what I could to render it in some degree worthy of its object, I could not bring myself coldly to sit down and deprive it of any decoration I had already designed for it; but have gone on upon the principle that the second idea of erecting a Hall of Science in proximity to the Memorial would not be allowed to rob the Memorial itself of its honours or its beauties; but that the funds which have been, and may yet be, subscribed for it will be devoted to the Memorial itself, and the Hall be erected from other sources I have, in fact, made each as good as I was able, so that either would, if need be, singly form a fitting Memorial; though I have supposed that if one of a monumental form be erected, it will not be stinted of the fair proportions which the public have, beyond a doubt, ideally prescribed for it, with a view to saving a fund to go towards the second object.

There can, indeed, be no doubt that the public expect a monument of great and conspicuous magnificence—not a mere group of sculpture, which, however fine as a work of art, produces little effect excepting from a near point of view; but an object which will strike boldly and forcibly upon the eye, and attract attention even from a distance. The monument of Frederick the Great, for instance, has been mentioned, and justly, as a noble work of art; but its beauty arises from the high *quality* of the art bestowed upon it, not from any inherent magnificence in its design or form. In scale it is considerably less than the statue (with its pedestal) of King George IV. in Trafalgar-square; and no one would, I fancy, deem that even any approach to a worthy scale for the memorial to the Prince Consort.

I will now take the liberty of offering a few remarks on the subject of the style I have adopted for the architectural portions of the monument. I have heard it asserted, that the tastes of the Prince Consort were wholly for Classic Art, and that it would, therefore, be inconsistent to erect a memorial to him in another style. It would be presumptuous in me to discuss such a question as what were His Royal Highness's preferences in matters of Art: I trust, however, that I may venture to record what has come, in three different instances, under my own observation.

I. When I had, in the spring of 1858, the honour of laying before His Royal Highness my first designs for the new Government Offices, he distinctly told me that he did not sympathise with the objections which had been made against them on the ground of their style being Mediæval,—not even in those points where they came in the closest proximity with a classic building; but that, on the contrary, he preferred variety of style, and thought the constant adoption of a single style fatiguing from its monotony.

II. In the case of the Wellington College, I was called in, with the approval of His Royal Highness, to erect a Gothic chapel to a College which is in another style.

III. When I made, some few years back, a Gothic design for the Guards' Crimean Memorial, I am informed, on the best authority, that my design was honoured by the approval of the Prince Consort to such an extent, that, though he had previously objected to the Memorial being erected in Hyde Park, on seeing this design he at once withdrew the objection, and offered every facility for its erection in the park—facilities which were withdrawn when another design was adopted. I would lay the more stress upon this circumstance, as being an emphatic approval by the Prince Consort himself of the erection of a Memorial in the Gothic style in Hyde Park, and that a design, which though of course infinitely inferior to that which I have now the honour of submitting, agreed with it sufficiently in general idea to show that the approval of the one would involve a still stronger approval of the other.

Fortified, then, by my experience in these three instances, I have not hesitated to adopt in my design the style at once most congenial with my own feelings, and that of the most touching monuments ever erected in this country to a Royal Consort—the exquisite 'Eleanor Crosses' of which King Edward I. erected no less than fourteen to commemorate his beloved Queen. I would further suggest, that this style has a peculiar appropriateness in the present instance, from the circumstance that its perfect revival has been, up to the present time, the one great characteristic of the history of architecture during the reign of Queen Victoria.

Though adopting, however, the style of a Gothic Cross, I have not followed any existing type, but have struck out one suited, to the best of my judgment, especially to this individual object.

The great purpose of an architectural structure, as a part of the Memorial, is to protect and overshadow the statue of the Prince. This idea is the key-note of my design; and my next leading idea has been to give to this over-shadowing structure the character of a vast *shrine*, enriching it with all the arts by which the character of *preciousness* can be imparted to an architectural design, and by which it can be made to express the value attached to the object which it protects. The idea, then, which I have worked out may be described as a colossal statue of the Prince placed beneath a vast and magnificent shrine or tabernacle, and surrounded by works of sculpture illustrating those arts and sciences which he fostered, and the great undertakings which he originated.

To go more into particulars: I have, in the first place, elevated the monument upon a lofty and wide-spreading pyramid of steps. From the upper platform rises a podium, or continuous pedestal, surrounded by sculpture in alto-relievo,

representing historical groups or series of the most eminent artists of all ages of the world; the four sides being devoted severally to painting, sculpture, architecture, and music. The figures are about 7 feet high, and would be treated something after the manner of Delaroche's "Hémicycle des Beaux Arts." This forms, as it were, the foundation of the monument, and upon it is placed the shrine or tabernacle already mentioned. This is supported at each of its angles by groups of four pillars of polished granite, bearing the four main arches of the shrine. Each side is terminated by a gable, the tympanum of which will contain a large picture in mosaic, and its mouldings will be decorated with carving, or inlaid with mosaic-work, enamel, and polished gem-like stones, thus carrying out the characteristics of a shrine.

The intersecting roofs would be covered with plates of metal richly enamelled and gilded, and their crestings would be of gilt beaten metal in rich leaf-work.

The whole is crowned by a lofty spire of rich tabernacle-work in partially gilt and enamelled metal, terminating in a cross, which would reach a height of 150 feet above the surrounding ground.

Beneath this vast canopy, and raised upon a lofty pedestal, would be the statue of the Prince. I have chosen the sitting posture as best conveying the idea of dignity befitting a Royal personage. Besides the sculpture already described as surrounding the podium, there would be, on pedestals projecting from each of its angles, groups illustrating the industrial arts, &c., as engineering, manufactures, agriculture, and commerce. Above these, against the pillars, and beneath the rest of the gables, would be statues which might represent the greater sciences, and in the tabernacle-work of the spire figures of angels and of the Christian virtues.

The mosaic pictures in the tympana of the gables may either represent, in an ideal manner, the patronage of art and science by royalty, or might illustrate important incidents from the life of the Prince Consort.

Finally, at the angles of the pyramid of steps from which the monument rises, are four large pedestals, bearing groups allegorically relating to the four quarters of the globe and their productions, referring indirectly to the International Exhibition.

The general material for the monument must depend, in some degree, upon financial considerations. It ought, no doubt, to be of marble; but, if this should be impracticable, one of the finest descriptions of stone must be made use of. If marble be used, the most durable variety is that known as the Sicilian. The material for the sculpture involves a question of still greater difficulty. I am myself inclined to the same which I have just named—the Sicilian marble. It is the only white marble which stands externally in our climate. That it does so is proved by the Marble Arch in Hyde Park. Its colour is not pure white, but quite sufficiently so for external works. The only alternatives are bronze and an electro-plate of copper. In every other respect than mere durability, bronze is as ill suited as possible to the atmosphere of London, for it becomes absolutely black, and the art expressed in it almost invisible. It might, it is true, be partially gilt, but even then its effect would be questionable. Many ancient works in bronze were wholly gilt, which would possibly, however, be hardly suited to the taste of this country, though certainly very magnificent.

Electroplate copper is much less costly than bronze, and is nearly equally good. It was much used, I believe, by the Prince Consort. Whether it becomes so black in the London atmosphere I am not aware.*

It will be seen from the foregoing remarks, that it is my object to unite in the Memorial all, or as many as possible, of those decorative arts which the Prince Consort so anxiously fostered. Thus, besides sculpture, which is the primary form in which monumental art must express itself, and in addition to actual architecture and architectural carving, which must ever be its closest ally, I have largely availed myself of *repoussé* work in metal; of enamel; of inlaying in rich polished stones, such as crystals, cornelians, granite, porphyry, &c.; of pictures and other decorations in mosaic-work, &c.; so as to render the Memorial rich with all the arts which can be united with architecture.

The vaulted roof of the interior would be decorated with the enamel mosaic-work introduced from Venice by Dr. Salviati.

By thus introducing all the arts subsidiary to architecture, we should not only be rendering the Memorial replete with beauty, and giving it that air of preciousness so essential to its object, but should be at once displaying and calling into exercise arts which the Prince Consort so earnestly desired to encourage; and should be rendering his Memorial not only an illustration of, but a means of practically realising, many of the objects to which he devoted his energies."

* I have learned, since writing the above, that the electro-deposit of copper acquires a by no means unpleasing tone of colour. I am also informed, on good authority, that there are several alloys of copper besides the ordinary bronze which retain their colour well, and by which several varieties of tint may be obtained; which, with the aid of partial guiding, would produce an excellent effect.

THE STRAITS OF LONDON.

PARK-LANE AT ITS JUNCTION WITH PICCADILLY

It would seem by the observations of the Hon. the Chief Commissioner of Woods, made a few weeks ago in the House of Commons, that we are not to get the relief to this strait which the projected forking of Park-lane, at the bend of the road near Hertford-street, driving the new prong through the little triangular-shaped plat of garden ground which lies in the rear of Apsley House and the other houses here, into Piccadilly *vid* Hamilton-place, was calculated to accomplish. At the same time, however, the hon. gentleman tells that the relief could be equally well effected by widening Park-lane at the particular point which causes the difficulty; and that this the vestry of St. George's, Hanover-square (in which parish the place is situate), could now do. It is quite true that one of the supplementary clauses appended last session of Parliament to the Metropolis Local Management Act, confers on vestries and district Boards the power to effect improvements of the kind, charging the expense of the same on the rates. But it is not in the least degree likely that the vestry of St. George's, rich as its parish is, will be bold enough to enter on an improvement undertaking, at an outlay of some 50,000*l.*, which the necessary buying up of Gloucester House and the adjacent properties up to the gardens would probably involve.

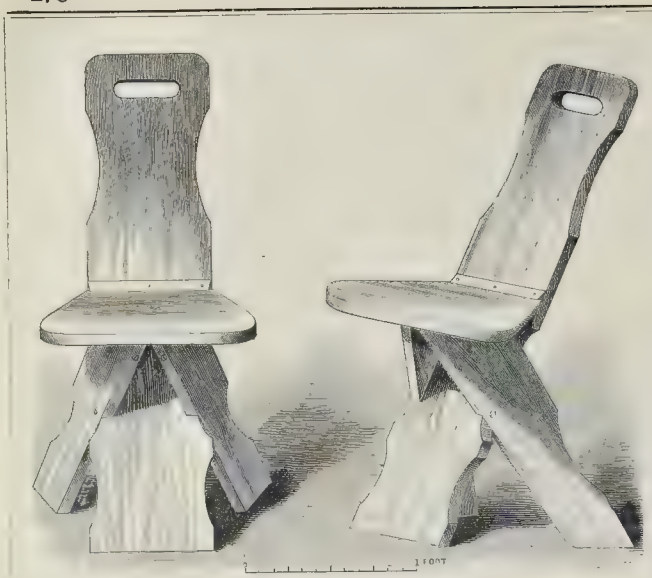
To the constant danger of this corner, to say nothing of its other inconveniences, I can personally testify. My place of business and my sleeping accommodation being in different localities, I have daily had, for twenty years, to approach the former by way of Piccadilly, and very frequently make the passage on the outside of an omnibus. A few years ago I was in this way placed in the painful position of being a spectator of a frightful accident which befel the poor driver of a cart, laden with bricks, who was, whilst in the act of pushing off his horse's head, in the vain hope of avoiding imminent collision in rounding the corner, crushed between the point of one of the shafts of his cart and the breast of the near horse of the omnibus, on the front of which I was sitting; the poor fellow, in a fearfully injured state, being carried off to the neighbouring hospital. Since that lamentable disaster I have seen innumerable "hair-breadth escapes" from collision in a similar way on this spot.

As respects the dangerousness of this corner, it arises mainly from the liability of a vehicle in turning from Park-lane, and proceeding towards Hyde Park-corner, meeting another vehicle coming at the same instant along Piccadilly from the direction of Hyde Park-corner, "*hugging*" the curb on that side—its right side of the road, be it remembered; and the difficulty aggravated by the "*way*" accumulated on each vehicle through the descent of the declivity which occurs in both roads at this part.

Now if the dead wall inclosing the forecourt of Gloucester House, next Piccadilly, were razed to within 2 feet of the street level, and an open iron railing set thereon, the driver of each vehicle (in the position just adverted to), would then be enabled to see through the openings of the railing the other in its approach, earlier by some ten yards of distance, thus giving sufficient time to each to shape his course out of the way of collision. By this the immediate dangerousness of the corner would be removed, though the real strait remain. To recommend the execution of this simple alteration has suggested this communication. Doubtless the noble Duke, if appealed to, would readily concede the permission; and the vestry may do the work well and ornamentally at a couple of hundred pounds expense.

Whilst on the subject of Park-lane, I would draw attention to the quagmire-like appearance which the roadway of this thoroughfare has for some time presented about the locality of the Grosvenor and Stanhope gates. Can the state of things here exhibited have origin in a desire on the part of the parochial authorities to bring *macadam* into disgust, so as to lead to a paving with granite blocks, to the end of economizing the rates, as was done some years ago by the same authorities in respect to Piccadilly, when one of our wealthiest noblemen, who was then building a magnificent mansion on the line, foreseeing that the noise of the traffic passing on "the stones" would be destructive of the comfort of the residence, was so displeased with the parish persisting to pave, in defiance of his reasonable remonstrance, that he declined to finish the edifice, and the building still remains in bare walls, a standing reproach to the parochial authorities, and a loss to the parish of a two thousand a year rating. To pave such thoroughfares as these with granite blocks, if not absolutely barbarous, is, to say the least of it, a retrograde movement in the science of road-making of half a century. If the supervision and maintenance of the thirty or so miles of road of St. George's overtasks the parochial working staff, would it not be better to put a few of the greater thoroughfares, such as Hyde Park-corner and Knightsbridge, Park-lane, &c, in contract with some eminent road-maker, as the vestry of St. James's does by Regent-street?—which street, since it has been in the hands of the contractor (Mr. Browse), has become an example of perfection in metropolitan road work, and practically disproves that doctrine, put forth a while ago by some professing to be learned in the line, which said that a metropolitan street under great traffic cannot be maintained a good roadway in macadam; Regent-street, be it observed, being subject to a traffic (counting in the reckoning the twenty-four hours of the day) little less in amount than that of London Bridge. The practice of contracting at least insures good roads, since contractors generally are well aware that their "profit and loss" account is best served by always keeping their *macadam* in the most perfect state of repair.

F. C.



THE SEWING-MACHINE.

An interesting paper on this important subject was read at the Society of Arts, on the 5th inst., by Mr. E. P. Alexander, in which the history and progress of the ingenious sewing-machine in its varied forms and improvements were reviewed. An extract or two will interest our readers.

In 1841, Elias Howe, a native of Cambridge Port, Massachusetts, first conceived the idea of constructing a really practical sewing-machine. A young mechanic, only twenty-two years of age, hardly capable of supporting himself and those most dear to him on his scant earnings, he laboured manfully, in a little garret in his native town, at his self-imposed task, during the few hours that were spared to him after the ordinary labours of the day were ended. He became enthusiastic; and although, as he says, he could not devote his attention to the subject during his working hours, he thought upon it when he could, both day and night. It grew upon him till he felt impelled to yield his whole time to it; and, being promised assistance by a friend, he devoted himself exclusively to the construction and practical completion of his machine. The result was that, in 1845, he perfected his first sewing-machine; and, in order to test its practical success, he sewed with it all the principal seams in two suits of clothes. On the 10th of September, 1846, he obtained his patent.

On the 1st of December, 1846, Mr. Thomas obtained a patent for the machine in England; soon after which Howe himself arrived here to assist him in adapting the machine to the peculiar kind of work required, namely, stay-making. Howe does not appear to have prospered here; for, in the spring of 1849, indebted to a friend for a steerage passage home, he returned to America, poorer, if possible, than when he left. He found his wife on a bed of sickness and in a state of utter destitution. Ten days after his arrival she died. During his absence in England his patent had been extensively infringed; and, in 1850, he commenced legal proceedings, and succeeded in every case in establishing the validity of his patent.

The turning-point in Howe's career had now arrived; and fortune soon began to smile upon him. In 1853 he granted his first licence; and in 1855 was enabled to regain possession of the whole of his patent, which at one period he had entirely disposed of, in order to meet the pressing demands that were made upon him. His patent rights being finally acknowledged, and his patent prolonged for a term of seven years, he now re-

A CHEAP GARDEN CHAIR.

ceives a royalty upon every sewing-machine manufactured in the United States, producing an income of upwards of 50,000*l.* per annum!

The sewing-machine has since gone under a variety of patentees' names, from the accession of real or alleged improvements; but hitherto it has been chiefly in America it has prospered; and in this country and on the Continent even yet it is, comparatively speaking, in its infancy. Since 1860, however, when old patents expired, it has taken a start even here: during the last two years no less than 20,000 machines have been manufactured in this country alone. But in America it is estimated that there are 300,000 machines in use, 75,000 of these in private families for domestic sewing; and the annual saving to the States is estimated at upwards of 29,000,000*l.* sterling! "It has opened avenues to profitable and healthful industry for thousands of industrious females, to whom the labours of the needle had become wholly unremunerative and injurious in their effects. Like all automatic powers, it has enhanced the comforts of every class, by cheapening the process of manufacture of numerous articles of prime necessity, without permanently subtracting from the average means of support of any portion of the community."

Amongst the leading branches of industry which are giving employment to these machines in this country are the manufacture of shirts, collars, stays, mantles, dresses, under-clothing of all kinds, coats, trousers, caps, trimmings, and boots and shoes. In this last-mentioned trade upwards of 3,000 machines are now employed. Of these about 800 are working in Staffordshire, the town of Stafford alone employing from 450 to 500 machines. About 800 are in use in Northampton. In Leicester a trade entirely new to the town has been created through the instrumentality of the sewing-machine; about 300 machines being now employed there in the manufacture of boots and shoes. Bristol employs about 250 machines, distributed among five establishments. The towns of Norwich and Ipswich employ about 800 machines, and a new trade in "ready-made uppers" has been created.

Although the introduction of the sewing-machine into the boot and shoe trade met with the strenuous opposition of the Trade Union, resulting in a general strike amongst the workpeople, it has since been admitted that its employment in this department of manufacture has given a very marked impulse to the trade generally, and has, in fact, been the salvation, to this country, of the lighter class of work; enabling us to compete, in a most successful manner, with the French manufacturers, who had almost gained the entire monopoly of this branch of the trade.

A CHEAP GARDEN CHAIR.

ONE who travels with his eyes open saw this chair in some public gardens at Marseilles, and finding it solid to sit on, cheaply made, and not easily injured by the weather, brought it over. Having a free spirit he has had a number like it made, and they are found satisfactory in the Clifton Zoological Gardens and elsewhere.

A piece of 9-inch deal forms the back and main support, and another piece of the same width is split for the two legs. The chair could be made, in numbers, for about two shillings.

PROPOSED NATIONAL PRESENTATION TO H.R.H. THE PRINCESS OF WALES, FROM THE SUNDAY SCHOOLS OF ENGLAND.

THIS presentation, the offer of which has been graciously accepted by her Royal Highness, is to consist of a Bible and reading-desk. It is calculated that from the schools throughout the country a sufficient sum will be at the disposal of the managers to enable them to secure the first artworkmen to execute the various portions of the work. The designs will be very elaborate, and will comprise carvings in relief in ivory, gold, and silver, representing scenes in Scripture history. The clasps will be, it is stated, of curious workmanship in pure gold, connected with a band of silver set with precious stones. The markers are to be of Coventry ribbon, made expressly for the work, the ends to be covered with gold and silver plates set with pearls. The reading-desk will be carved in woods of various kinds. The designs are being prepared by Mr. Horatio N. Goulty, of Brighton, architect, under whose direction the work will be carried out.

SCHOOLS OF ART.

The Manchester School.—The annual meeting of this school has just been held in the lecture theatre of the Royal Institution, Mosley-street. There was a numerous attendance of ladies and gentlemen, who first inspected the works of art displayed in the picture galleries. Sir J. Kay-Shuttleworth presided. Mr. Mückley, the head master, in his report, called attention to the necessity of greater attention being given to the application of art to the manufactures of this city and district. But the number of students was small in proportion to the extent of the trades in which art was required. The desire for purer art in connexion with our buildings, clothing, and manufactures, was constantly increasing; and hence the duty of those who profess to lead the tastes of the nation was to encourage the teaching of art. As to the school, he stated that twenty-six medals had been awarded. The attendance at the evening and artisan classes was excellent. Thirty poor schools were in connexion with the institute: upwards of 30,000 persons received instruction in art; while 202 prizes had been awarded, and applications were constantly made for art apprentices. In the committee's report, complaint was made of the withdrawal of the Government grant of 300*l.* There was consequently a deficit to about that amount.

The chairman, after noticing the success of this institution, proceeded to review the discoveries of modern days as a prelude to enforcing the importance of a deeper and higher culture of art and science. We had clothed the millions with cheap fabrics, but we had produced few articles of luxury for the wealthy. In a crisis like this, it became us to consider whether we had not in our reliance on the principle of cheapness of production, too much neglected the cultivation of such science and art as ministered to the highest productions of industrial skill. In our warehouses we had taken a model of the Italian school, and we had decorated our streets with palaces almost as picturesquely as those of Venice and Florence. It was to be regretted we had no group of public buildings forming as it were a crown to the architecture of the city. These local proofs of the development of a public feeling for art were signs of a corresponding expansion of national taste. Industrial art would have a fairer field in England than heretofore. Probably, however, as a nation, our true place in the industry of the world would be sustained by such a combination as would enable us to bring high products of scientific research and exquisite artistic skill into the market at a cheaper rate than other countries; and we must strive to give such precision to machine work as would enable it to rival the most perfect productions of manual skill. Success in this higher department of industry was only to be hoped for under the guidance of a taste and skill as delicate and as highly instructed as that which had given France the command of all the highest styles of decorative printing. The cultivation of this taste and skill in the designer was among the principal objects of the provincial schools of art.

The Southampton School.—A distribution of the medals and prizes awarded by the Government Examiners to pupils of this school has been made by the Lord Mayor of London, in the lecture hall of the Hartley Institute. The following is an extract from the Report of the head master, Mr. Baker, to the committee: "In my last report I alluded to the fact that, although a large number of teachers in public schools had been successful at the Drawing Examination of 1861, their attendance in the classes had subsequently fallen off in consequence of the new Minutes of Council on Education. This was the case not only in the Southampton School of Art, but also in Romsey and Ringwood, and from this (and other local causes) the drawing classes in both these towns have been discontinued. A new Minute has just been issued, which gives to all managers of schools a direct interest in the success of their students in drawing, and I hope this will have the effect of reviving the instruction where it has lately been dormant, and of inducing the managers of all schools to have it introduced as a branch of general education. During the current year the classes at the School of Art have been attended by about the same number of students as last year, but it is to be regretted that many of them pursue their studies in a desultory manner.

STREET ARCHITECTURE IN NOVA SCOTIA.

THE NEW UNION BANK OF HALIFAX.

THE new Union Bank Building, which has been lately erected at the corner of Hollis and Prince Streets, has two fronts in the Wallace free-stone; that in Hollis-street being 40 feet in extent, and that in Prince-street 60 feet. The ground floor is occupied by the banking-room (30 feet square by 22 feet high), the directors' and cashier's rooms, the fire and burglar proof safe, and entrance-hall and staircase. The upper floors are divided into the several apartments forming the cashier's residence. The windows have wrought-iron rolling shutters; those on first floor having also ornamental balconies. The contract for the whole of the works was taken by Mr. Henry Peters, of Halifax, for 8,000*l.* The architect was Mr. C. P. Thomas, of Montreal, nephew of the late Mr. John Thomas, the sculptor.

THE NEW UNION BANK OF HALIFAX, NOVA SCOTIA.—Mr. C. P. Thomas, Architect.

FOREIGN EXCURSION CLUBS.

THERE is nothing which will more effectually promote friendly relations amongst neighbouring nations than a frequent communication with each other of men of intelligence on both sides who are engaged in the various branches of artistic and other kinds of industry: besides the good which is in this way effected, mutual instruction is the most valuable kind is exchanged in the course of those visits. It is therefore gratifying to notice that visits of the English working classes to foreign cities, such as have been managed by the formation of societies and clubs in the metropolis, are being organized in other large towns throughout the kingdom. At Birmingham a body of workmen are making arrangements for a summer visit to Paris, and we hear of similar plans elsewhere.

At a first glance, Paris seems a long way off, but in reality it is almost as easily reached, and at as small cost, as some of the towns in the North of England. Those towns where skilled labour is in demand, and where foreign excursion societies have not yet been thought of, would do well to consider the subject; for now is the time to make preparation, and provide, by weekly payments, for the needful expenses.

WORKING MEN'S HOUSES AT EDINBURGH.

THE success which has attended the efforts of the Edinburgh Co-operative Building Society to provide suitable houses for working men, in Reid-terrace, Stockbridge, has induced the directors to commence another range of working-men's houses, to run parallel to Reid-terrace, and to be of the same design and workmanship. Reid-terrace, according to the *Scotsman*, consists of a group of forty self-contained houses, all of which have been let, at prices ranging from 130*l.* to 150*l.*, with a fine or perpetual ground-rent of 11s. per annum. The houses are formed in two stories, with attics, the upper floors being entered from outside stairs, and having additional accommodation in the attics. The ground-floor houses consist each of a room, kitchen, and light bed closet, with coal-closet and water-closet, and the rents are 11*l.*; while the upper-floor houses, having a bed-room additional, are rented at 13*l.* The new street, which is to be called "Hugh Miller-place," is to consist of a row of thirty-three self-contained houses; those on the lower or ground-flat to consist of two rooms and a kitchen, and those on the upper story to have two attic rooms in addition; while all the houses are to be fitted up with water-closets, soil-pipes, and every domestic convenience. A small plot of garden ground will be railed off in front of each house, and all the tenants will have the use of a large bleaching-green. Twenty-seven of the houses have already been bought by one gentleman, and the remaining six will, no doubt, soon be sold.

The foundation-stone of the new street, to be called "Hugh Miller-place," has been laid by the Rev. Dr. Begg. A new species of deposit, in the bottle placed in the cavity of the stone, was a photograph of Dr. Begg.

In his address at the stone-laying the rev. doctor thus explained the principle (better known in England) whereby workmen might become landlords:—

"Any man who has 5*l.* now can get a house of his own. If he has that sum he can come and buy one of these houses, because the Property Investment companies will advance all the rest of the money. One of the houses on the ground-floor of the buildings opposite, containing two rooms and a kitchen, costs 130*l.*; upon the security of which building the Investment Companies will advance 125*l.* If you were to rent such a house as I have referred to, you would pay 11*l.* of rent; whereas, what the Property Investment Company would charge you would be just 2*l.* more,—viz., 13*l.* a year, and that only for fourteen years; at the end of which time the house will be your own, and will belong to your children after you [not in the shape of a merc lease, for a term, as with us, but in perpetuity]. Take, on the other hand, the houses that are situate on the second story of the building, which contain, in addition to the two rooms and a kitchen, two attics. These cost 150*l.* Well, let us suppose that a workman is disposed to buy one of these houses, and that he will require to borrow the few additional twenty or twenty-five pounds from the Investment Company. For that he will pay 2*l.* 12*s.* a year, or, in other words, he will pay 15*l.* 12*s.* per annum; and, as the rent of these houses is 14*l.*, he will, by paying the difference, viz., 1*l.* 12*s.*, become the owner of the house in fourteen years. I observed a writer in the *Scotsman* newspaper the other day saying that he wondered why houses were not provided at 15*l.* of rent, which would cost only some 240*l.* to build. Why, here we have houses containing four rooms and kitchen rated at 14*l.* rent, which cost only 150*l.* to build; and if a man will pay, as I have stated, 1*l.* 12*s.*, he can get the house to himself at the end of fourteen years. This I take to be the effectual mode of underpropping the whole social fabric, and giving every man a stake in the property of the country. I am happy to say an arrangement has been made whereby the title is procured at a very small cost."

Dr. Begg then announced that he had offered, in connexion with the Co-operative Association, two prizes to workmen for the best essay written by a working man upon working men's houses. The Association had also offered a prize for the same subject. The competition is open to all operatives in Edinburgh and Leith.

THE PARSONAGE-HOUSE AT WIMBLEDON.

A "WIMBLEDON VILLAGER" says,—"Will you spare me a corner in which to lament over the demolition of the old parsonage-house at Wimbledon, the retreat of Cecil during the reign of Queen Mary? It was, I suppose, one of the most curious specimens, near London, of a country parsonage of the Middle Ages; and one cannot but express one's sorrow at seeing it ruthlessly pulled down, apparently for little purpose. However, I suppose we must, though unwillingly, concede to all the right to do what they will with their own.

ST. GEORGE'S CHURCH, TUFNELL PARK, HOLLOWAY.

THE trustees of this temporary church having lately come to grief about the land upon which it was erected, had to remove the building to ground belonging to the Tuffnel Estate, close by. Mr. Truefitt, who designed the church, proposed a plan for removing it bodily; but as that mode of proceeding was found to be as expensive as taking it down, it was decided to adopt the latter plan. The tender of Messrs. Carter, of Hornsey-road, was accepted; and in the short space of five weeks the building, which contains sittings for upwards of 900 persons, was taken down and re-erected, notwithstanding the fact that the late marriage rejoicings and Easter time came within the five weeks granted to the builders for their work. Some credit appears, therefore, due to them for the manner in which they have executed their contract. The church was re-opened on Sunday last, the congregation having been absent for four Sundays only.

SCHOOL-BUILDING NEWS.

Ledbury (Worcestershire).—It is proposed to build a new school at Ledbury, to accommodate 150 boys. About 900*l.* would be required, and of this 237*l.* will be got by grants.

Bradford.—The chief stone of a new Sunday School, to be erected in connexion with the Wesleyan Methodist Chapel, Dudley-hill, has been laid. The site adjoins the burying-ground at the end in rear of the chapel. The school will be one story in height, and outside its dimensions will be, length, 50 feet 11 inches; breadth, 32 feet 6 inches. It will contain two class-rooms, 12 feet square, and a large room 36 feet by 30 feet; will be lighted by twelve arched windows, and heated by a hot-water apparatus. Accommodation will be afforded for 300 scholars. The cost of the erection will be about 500*l.*

Boys' British School, Hastings.—This is a plain Gothic brick structure, erected for the trustees to accommodate 120 boys. The interior dimensions are 54 feet by 24 feet, and the height is 30 feet to ridge. It has an open roof, and was built from a design by Mr. Beck, architect, Hastings, at the cost of 513*l.* 18*s.* 4*d.* The builder is Mr. A. Vidler, of that place.

STAINED GLASS.

St. Nicholas Church, Rochester.—The window to the memory of Mr. George Baker, late of King's Walden, near Hitchen, and formerly of Rochester, has been placed in the centre window of the south aisle of St. Nicholas Church. The centre compartment contains the arms of the Baker family, and under these are placed, in a rosette, the initials "G. B." in the centre. Upon the quarries are painted the crest of the family (the castle and ancient keys), the whole being surrounded with a coloured border: the lower part of the margin contains the inscription. The two side lights are similar, with the exception that the emblems of the Trinity and the Lamb and the flag are inserted on each side of the arms. The tracery heads are filled in with coloured glass: the quatrefoil is of a similar description, forming flowers, in the centre of which is the dove descending. The design of the window was by Mr. Thomas H. Foord, and it was executed at the works of Messrs. Foord, Lambeth.

Lincoln Cathedral.—A stained-glass window, to the memory of the late Earl of Yarborough, has been placed in the north aisle of the presbytery in Lincoln Cathedral. There are six panels, containing the following subjects:—Christ's Agony in the Garden; Christ bearing the Cross; the Burial; the Angel and Three Marys at the Tomb; Christ's Resurrection; and Christ appearing to Mary. there are also twelve figures of angels, in two rows of six each, bearing emblems of the Passion. The work was executed by Messrs. Clayton & Bell, of London, at a cost of 300*l.*, which will be borne by the present Earl of Yarborough. The masonry outside the window has been restored. The same artists are, we understand, at present employed in executing a window to be placed in the south aisle of the nave, to the memory of the late Mr. Robert Swan, chapter clerk.

Peterborough Cathedral.—The new stained-glass window recently erected in Peterborough Cathedral to the memory of the late Prince Consort is the work of Mr. Alex. Gibbs, of London. It is a two-light perpendicular window, and contains two full-length figures. One is King David bearing the harp; the robe being richly coloured in purple and amber: the screen is richly diapered and surmounted with a canopy on ruby ground. The second figure is that of King Solomon within the temple, the robe being ruby and green, &c. In the upper compartments there are smaller figures of the four evangelists, richly coloured, and above these figures is a diapered screen. The top spandril contains a representation of the dove, and the smaller pieces of tracery are filled with roses. The window is the gift of Mr. G. W. Johnson.

Long Buckley Church.—The *Shrewsbury Chronicle* states that Mr. C. Evans of that town has completed a decorated memorial window for Long Buckley Church, Northamptonshire. The window is divided into three compartments or panels. The first represents the interview of our Saviour with the Pharisees, when, speaking of himself, he tells them "I am the good Shepherd: I lay down my life for the sheep: and other sheep I have which ye know not of." The second, or centre compartment, represents the Ascension. "The figure of the Saviour, hovering in the air, surrounded by celestial light," says the *Chronicle*, "and the entranced rapturous gaze which his disciples cast towards him, as he gradually retreats from their view, while yet their hearts burn with the divine promise, 'I go to prepare a place for you,' are portrayed with skill." The third panel of the window shows the Three Marys at the Sepulchre, at the door of which is seated the angel, who, in reply to their interrogation, tells them "He is not here: He is risen." The lower portion of the window, forming the basis on which these compartments rest, consists also of three divisions, the decorations being of a geometrical character, with the figures of which a foliaged tracing is intertwined. The upper portion of the window, which is of considerable dimensions, consists of three portions: the centre, and of course uppermost, shows the sacramental cup, surrounded by rays of light, above which are the words "This cup is the New Testament." To the left, and slightly below, on a kind of shield, are the arms of the See of Peterborough, while directly opposite, on a similar shield, are the arms of the Rev. G. L. Yate, the donor of the window, his son being vicar of the parish. The entire window is surrounded by an ornamental border.

Trinity Church, Dean, Edinburgh.—The great west window of this church has just been completed. The work was begun nearly five years ago, by the Rev. Mr. Faithfull, clergyman of the church, who contributed one of the lights as a memorial; and his example has been followed by members of the congregation, till now all the lights, twelve in number, have been filled, and the expense of the top tracery apportioned among the contributors. The church is in the Perpendicular style, and the upper tracery is filled with Christian emblems and monograms, surmounted by foliated ornament. The six lower upright compartments contain illustrations of the life of the Saviour, viz.,—His Birth, Baptism, Last Supper, Crucifixion, Appearing to Mary, and Ascension. The six upper compartments contain subjects illustrative of the parables and sayings of Jesus Christ. The subjects are in elongated medallions, and the groundwork and bordering are rich and subdued in colour, receding from and giving prominence to the historical illustrations. This window has been executed by Messrs. Ballantine & Son, and the side windows of the church are being gradually filled by the same artists.

Free Church Presbytery Hall, Edinburgh.—The large west window of this hall is filled with stained glass in the old Scotch style, containing medallion heads of leading Presbyterian Reformers;—George Wishart, John Knox, Alexander Henderson, John Erskine, Henry Moncrieff, Andrew Thomson, Thomas McCrie, Thomas Chalmers, and William Cunningham. These heads are executed in light and shade on circles of pale blue, and the names are inscribed on ruby bands surrounding the circles. The window is divided into three compartments, and each light is surrounded by a bordering of thistles in white and gold on a ruby ground. The St. Andrew's cross is introduced, connecting the medallions, and the intervening spaces are ornamented in accordance with the details of the building. Another window, the donation of the architect of the building, Mr. David Cousin, is nearly completed, and contains full-length figures of James VI., George Buchanan, and Sir David Lyndsay. These windows are also by Messrs. James Ballantine & Son, Edinburgh.

CHURCH-BUILDING NEWS.

Caistor (*Lincolnshire*). — The ancient church here, which has been closed since last summer, during the renovation of its interior, was re-opened on Easter Monday. There was a porch both on the north and south sides: the latter, which was modern, has been removed, and the original Norman doorway outwardly restored, but walled up inside, the doors being left standing. The north porch has been rebuilt, and new windows placed in the north aisle and the transept. The chancel was "restored" a few years ago by the late Duke of St. Alban's, lessee of the rectorial estates, and his successor has contributed 80*l.* towards the present work in that part of the edifice, the rest being defrayed by the Ecclesiastical Commissioners. Three lancet windows with trefoil cusps have been placed in the east wall of the chancel; and above, in the gable, a quatrefoil in a circle, filled in with a cross in stained glass. The flat ceiling of the chancel has been removed, and also that of the nave, and the roofs improved so as to give them a more ecclesiastical appearance. The floor of the chancel has been raised and paved with tiles, the sanctuary being enriched with encaustic tiles, of which also the reredos is formed. The stalls in the chancel and the communion rails are of carved oak. The old square pews have been replaced by open seats of stained deal, and the floor of the nave paved with tiles. The walls have been coloured and also the pillars, the latter, we understand, being supposed to require colouring in consequence of the great many repairs which they have had to undergo. Mr. Butterfield, of London, is the architect under whose direction the work has been carried out, and the cost has exceeded 1,000*l.*, which, we learn, has been nearly all raised, though more funds are required for the improvement of the churchyard and the building of a wall around it. There is accommodation in the church for 450 persons.

Cambridge.—The following tenders were received for All Saints' New Church:—

Smith, London	£5,852
Thoday, Cambridge	5,459
Bullock, ditto	5,359
Tomson, ditto	4 785
Attack, ditto	4,795
Bell, ditto	4,325

Mr. Bell's tender has since been reduced about 70*l.* by sundry alterations in the design, such as plastering the roof instead of boarding it, and resorting to the expedient of building the walls with an outer casing of stone, and an inner casing of brick, and filling up the middle portion with concrete, instead of strongly constructing the whole with solid masonry. Even as the contract is now arranged on this reduced scale, it does not include boundary walls, bells, font, pulpit, seats or pews, organ, or fittings of any kind, all of which the parishioners must provide by church-rate, or by additional subscriptions. Even the design already published was abandoned, and a fresh one obtained, of which little is known. The committee, remarks the local *Chronicle*, would do well to exhibit publicly the intended design: we believe that the last adopted design consists of a short chancel; to the west of that a tower, the lower stage of which forms part of the chancel; and to the west of the chancel a nave with an aisle on the south side. There is a porch on the north side of the nave, similar to that on the north side of St. Michael's Church. The tower is carried just above the nave roof, and covered with a temporary roof. The completion of the tower and the addition of a spire are left for a future occasion.

Shenfield (*Essex*).—The parish church of Shenfield is now under the process of restoration and enlargement. The church is ancient, and consists of nave, chancel, and north aisle. The most interesting features in the edifice are the clustered oak columns, with their moulded caps and bases, hewn out of solid trees, and which support the roofs. Originally oak arches sprang from column to column, thus forming an arcade along the length of the nave and chancel; but the beauty of this design had been entirely destroyed by the removal of the arches and the insertion of iron columns. It is now intended to restore the arcade to its original form. The roofs and walls of the nave and chancel having been found to be in a dangerous condition, it was needful to remove them: the new roofs will be tiled in bands of colour, lined internally with boarding stained and varnished, and worked out into panels. The chancel arch will be in oak and moulded. The new windows will be in stone of the Perpendicular date; and the old stone of the east window will be re-used. The chancel is to be extended 10 feet, and will contain stalls facing north and south. The new seating will be low and open, of deal stained and varnished, and set upon oak kerbs. The whole of the gallery will be removed, and the tower thrown into the church, thus exposing to view the oak framing of the spire, and opening the present west window to the church. The passages will be laid with coloured tiles in patterns, and the church heated by Parritt's underground stoves. There will be an increase of fifty sittings upon the former arrangement of the pews. The works are being executed by Mr. John Hammond, of Warley, from the designs and under the direction of Mr. Bartleet, of Brentwood, architect; and will involve an outlay of upwards of 800*l.* The funds at the disposal of the committee are exhausted.

Rochford (*Chelmsford*).—Rochford Church has been re-opened after restoration. Before the alterations the church was not in a bad state, but the pews were inconveniently arranged; the nave roof modern with a flat ceiling; the aisle roofs, although they were old, ceiled over, and the oak timbers covered with whitewash. The works, which have now been completed, consist of new clerestory walls, windows, and new nave roof. The old oak timber in the aisle roofs has been repaired and restored with new, the whitewash removed, and the masonry restored. The chancel roof, which was the original one, has been repaired and panelled. In lieu of the old high pews the church has been re-seated throughout with open seats, and also new seats in the chancel. It is calculated to accommodate 430 persons, and gives 220 additional sittings, every seat having a view of the pulpit. The tower-arch and the internal brickwork have been repaired. Before the restoration this arch was blocked up by a gallery, and covered over with whitewash. A hot-water warming apparatus has been erected, the furnace being placed near the vestry. The architect by whom the church restorations were carried out was Mr. W. Slater; and the builders were Messrs. Nutt & Cumber: the pulpit and carving were executed by Mr. Forsyth. In the chancel are three stained-glass windows, presented by Mrs. Gardiner, widow of the Rev. William Gardiner, who was rector of Rochford twenty years. The window nearest the communion-table in the south-east end, represents a dove descending, and a cross and crown: in the centre is the crest of the late rector. The other window in the south chancel bears two representations of our Saviour,—one as the man of sorrows, wearing a crown of thorns; and the other having a divinely serene aspect, with the inscription,—"Every Branch that beareth fruit He purgeth it that it may bring forth more fruit."—St. John xv. 2. And below the inscription, 2 Tim. ii. 12, "If we suffer with him we shall also reign with him." The window in the north-east chancel, in memory of Mrs. Gregson, represents the figures of Faith and Patience, surrounded by a groundwork of lilies. This window and the window with the emblem of the dove were executed by O'Connor; and that with the figures of the Saviour by Bell, of Bristol. The large plain glass window is surmounted with stained-glass figures of the four evangelists, and angels holding scrolls, having inscribed "Glory to God in the highest, and on earth peace." A feature in the interior of the church is the restoration of the tower, the red brickwork of which has been cleaned and pointed; and the removal of the gallery with the organ throws open to view the tower-window, which has been newly glazed, and affords additional light to that end of the church. A piscina, which was plastered up, was discovered during the restorations on the south side of the altar. Externally the church has been cleaned and re-tiled. The south entrance, a porch, has been restored, with large new doors, and paved with tiles. The tombs and graves in the churchyard have been cleaned, and the walks new gravelled. The cost of restoring the church, including the stained-glass windows, has been about 2,000*l.*

Sawbridgeworth (*Herts*).—The new Congregational church which has been erected in place of a very mean and inconvenient structure, built in 1814, is now nearly completed, and the opening services will take place on the 29th instant. The building is of Gothic design, in the Early Decorated style. A square tower, at the junction of the chapel and school, rises to nearly 80 feet high.

Waddesden.—The parish church of Waddesden, Bucks, which is being restored from designs by Mr. Alfred Chatwin, has, at the completion of the interior, been re-opened by the Bishop of Oxford.

Horton Kirby (*Kent*).—On Friday, the 26th of March, the parish church of Horton Kirby, after having undergone a restoration, was again opened for divine service. The stone arches which support the tower have been relieved from their coating of plaster: the ceiled roof has been opened; and the old oak timber exposed to view. Seven stained glass windows (the gift of Mrs. Bradford), executed by Mr. O'Connor, of London, have been placed in the chancel transepts. Poole tiles have been laid throughout the church, and a new organ (built by Bevington & Sons), of London, erected in the south transept.

Hove (*Brighton*).—A church, under the title of "The Trinity Church," and based on the same principles as the parish church, is now in course of erection in this neighbourhood. Its site is on a large plot of ground, at the back of Ventnor-villas, bordering the Wick estate. The dimensions of the structure will be considerable; and it will afford accommodation for about 650 adults, under the existing contract; but it has been arranged to furnish 200 additional sittings, making a total of 850, by the erection, at a future period, of an aisle on the north side. The design consists of a nave, side aisles, with south tower, porch, and chancel, with apsidal end. A tower and spire also form a portion of the design. The interior of the structure will have open-timbered and boarded roof, slightly stained and varnished; and bricks are employed for the external façades, with a moderate admixture of stonework. Mr. Cane, of Brighton, is the contractor for the work; and Mr. Woodman, the architect.

Cheltenham.—The contract for the buildings at the new cemetery was awarded to Messrs. Billings & Son, of this town, at the sum of 4,295*l.*, or 95*l.* above the estimate of Mr. Knight, the architect. Of the ten tenders sent in the lowest was 3,900*l.*, and the highest 5,175*l.*; the one selected hitting the medium between the two extremes. The committee were unanimous in ignoring the five lower tenders.

Uffculm (*Devon*).—The congregational chapel at Uffculm was opened on Good Friday. The building will seat 250 persons, with height for an end gallery. The style is Early English. There are a turret and entrance porch at the north-east angle. The material used for the general walling is Westleigh stone; Bath stone for the sills, tracery, copings, &c.; and bands and arches of red brick. The architect was Mr. Bidlake, of Wolverhampton; and the builders Messrs. Hart & Welland, of Uffculm, and Mr. Parish, of Tiverton. The cost was 545*l.*

Ruthin (*Denbighshire, N.W.*).—On the 31st ult., the foundation stone of a new church, dedicated to St. Peter, and erected at the sole expense of Mr. John Jesse, F.R.S., was laid at Llanbede. The style is thirteenth-century Gothic: the varied coloured materials of the locality are to be freely used. The architects are Messrs. J. Poundley & David Walker; and Mr. James Porteus, of Welshpool, is the sole contractor for the works.

Brindle Heath (*Manchester*).—The foundation stone of St. Anne's Church, Brindle Heath, has been laid on the site of the old chapel in Brindle Heath-road. This church, the foundations of which have already been put in, is to be built in brick of two colours, with stone tracery and dressings. The roofs are to be covered with Staffordshire tiles. The plan consists of nave and south aisle, south-western porch, chancel and south chancel aisle, which last is screened off for organ chamber and sacristy. The chancel is fitted with seats placed stallwise for the choir. All the nave seats face east, and are open benches. The nave is divided from the aisle by an arcade of three pointed arches, sustained by stone pillars with moulded caps and bases. The style of architecture in which the church has been designed is early geometric Gothic. The contract has been taken

by Messrs. Thackrah & Pierce, of Stockport. The architect is Mr. J. Medland Taylor, of Manchester.

Leeds.—On Easter Monday the memorial stone of Blenheim (Baptist) Chapel, was laid by the mayor of Leeds. The new building is situate at the corner of Blackman-lane, Woodhouse-lane, and is to cost upwards of 3,500*l.* It will comprise a chapel capable of seating 600 persons, a school-room, 56 feet by 30 feet, a lecture-room for week evening services, a class-room for sixty infants, four other class-rooms, three vestries, and other apartments. The front of the chapel is towards Woodhouse-lane, and will exhibit an elevation 60 feet high to the apex of the gable. The Gothic style of architecture is adopted; and, internally, the plan of the chapel will consist of a nave 40 feet wide, with transepts and an apsidal recess. In the latter, and behind the pulpit, will be a gallery for an organ (the floor of which will be level with the pulpit floor), and seats approached by a separate entrance for the choir. The architects are Messrs. Paul & Ayliffe, of Manchester, and the contractor, Mr. J. Wood, Woodhouse.

Rawmarsh (Yorkshire).—The chief stone of a new Congregational Chapel has been laid at Rawmarsh. The site is upon a vacant piece of land at the junction of Stocks-lane with the Swinton-road, near the toll-bar. The edifice (of which Messrs. Shaw & Masterton are the architects), will accommodate 380 persons, and contain a vestry capable of seating forty persons. It will be built in the Classic style of architecture, the dimensions of the interior being 34 feet by 22 feet. There will be a small gallery at the east end of the building, and space will be left for the erection of side galleries. Mr. Harper, of Masborough, is the contractor for the masonry and joiners' work. The cost of the erection is estimated at 800*l.*, towards which there is already 300*l.* in hand.

New Whittington.—A Baptist Chapel has been opened here. The chapel, according to the *Sheffield Independent*, will cost about 400*l.* The edifice was designed by Mr. T. Lister, Newbold. Inside length 40 feet by 30 feet, entire height 17 feet 6 inches. The seats are open and placed in amphitheatre form. A raised platform instead of a pulpit is introduced. One of Messrs. Stanley's stoves is used to heat the place. Behind the chapel school-rooms are erected.

Washington (Newcastle).—The foundation stone of a new Roman Catholic Chapel has been laid at Washington, with the usual ceremonies. The site is by the roadside in the village of Washington. The building is being erected from the designs of Mr. A. M. Dunn, of Newcastle, and is French Gothic in style, being of brick with stone dressings, and is expected, when completed, to afford sitting accommodation for about 700 persons.

PROVINCIAL NEWS.

Oxford.—The new Corn Exchange was inaugurated on the 8th instant. The chief stone was laid with Freemasonic ceremonial on 30th October, 1861. The architect was Mr. S. L. Seckham, the city surveyor, and the contract was taken for 2,179*l.* by Mr. Dover. The new building is considerably larger than the Town Hall. The principal entrance is by the Town Hall-yard, but it is intended to have an additional one, by Carter's-passage, from the High-street. Being without frontage to the street no expense has been lavished upon the exterior. The centre of the roof is of wood, while the sides, which slope down to the walls, are of glass. The walls are divided by pilasters, separating the main timbers of the roof into compartments; and these are subdivided into panels with semicircular arches, which are formed of brick and stone work, of several colours, there being no plastering. The sculptured stone-work, representing agricultural products, has been chiselled by Mr. O'Shea. A narrow gallery, with light iron railing, runs along the side walls, being constructed by corbellings out from the walls, and supported upon a series of arches. On the north and east sides are galleries, and below these are ranges of offices, &c. Ample provision has been made for light and warmth. Hot-water pipes are carried under the floor, and two large fire-places are fixed on the south side. The acoustic properties of the building, according to the local *Journal*, appear to be seriously defective.——The chief stone of the new Workhouse for Oxford has been laid. The building will consist of three principal ranges or blocks parallel to each other, approached by the new road in course of formation, which leads to the centre of the house. The central portion of the front range will comprise two stories, with entrance archway, surmounted by a bell-cote. This portion is allotted to the porter's day and bed rooms, clerk's and committee rooms, and the other portion of this range, forming wings on either side, will contain a board-room for the guardians, and dispensary and other offices. Beyond these will be the receiving wards and tramp wards for both sexes, with separate entrances to each from without, and also private entrances from within for the use of the officials. Passing through the front archway, in a straight line at the distance of about 100 feet, will be the main building, 258 feet long and 44 feet wide, with central corridor extending the whole length, but broken in the centre by a large hall, over which will be a tower upwards of 90 feet in height to the vane, serving the purposes of a staircase for the use of the master and matron, and of a ventilating shaft. The building will be divided into separate day-rooms and dormitories for the several classes of inmates, each class being kept quite distinct, and having its own staircase, lavatories, and yards. The aged men and women will occupy the front, and the able of both sexes the back of the building, connected with which will be yards and sheds for stone-breaking, workshops, laundry, wash-houses, &c., each class being again sub-divided. The kitchen, offices, and dining-hall will be at the back of the main building, and approached by separate covered ways for both sexes. The infirmary will be placed at the back of the whole on the higher ground, and contain separate wards for male and female patients, with nurses' rooms to each class. The fever-wards will occupy the third story, having separate staircases entered from the back. A detached chapel, of a cruciform shape, will be provided. The whole is to be built with red and white brick, with a small portion of Bath stone for cornices, brackets, tabling, &c. The staircases will be of York stone, and all the internal walls of brickwork. The dormitories will be 12 feet high. The site consists of about twelve acres of clay soil, and is on an incline: the building will be about 20 feet above the level of the Cowley-road. Mr. William Fisher is the architect, and Mr. J. C. Curtis the builder. Mr. J. Walker, of Birmingham, is the clerk of the works.

Wimpole.—The tender of Messrs. Thoday & Clayton, of Cambridge, has been accepted for the erection of new farm buildings on the Wimpole estate. The tenders were:—

	House.	Out-buildings.
Bell & Sons	£894 0 0	£592 10 0
Genison	750 0 0	590 0 0
Thoday & Clayton	748 0 0	585 0 0

Wolverhampton.—It has been resolved to enlarge the Orphan Asylum here so as to accommodate 160 orphans instead of 70. The cost of the enlargement will be 5,500*l.* Mr. Joseph Manning, of Corsham, the architect of the present building, has prepared the plans.

THE OPERA HOUSES.

Italian Opera, Covent Garden.—"Masaniello," with which the house opened, was unexceptionally presented, and gave genuine delight. M. Faure is an admirable *Pietro;* and M. Naudin (though not Mario) both sang and acted the fisherman chief with ability. The great duett in the second act was redemanded with unmistakable enthusiasm. The scene for this act, in the environs of Portici, and that for the third act, the Market-place, are especially beautiful.

Madlle. Fioretti has been successful as *Elvira* in "I Puritani," but is scarcely likely to create any *furore.* Well-trained, and endowed with a good organ, her fluency and finish of execution give pleasure; but there is a want of soul, and she fails to touch the heart of her audience. "If I were young," Rossini said some years ago to Madame Alboni, "I would make you love me, break your heart, and leave you the finest singer in the world." A similar process would greatly improve Madlle. Fioretti.

Her Majesty's Theatre.—We have received two or three letters as to the new proscenium frame here. We give part of one of them, that the merit or otherwise may rest on the right shoulders:—

"The decorations of this theatre were not of the high, thoughtful character of Giotto's works, or of the modern pre-Raffaellite decoratists; nevertheless, they were pleasant in tone of colour: taken as a whole they were warm and rich, and served as an excellent antidote to the prevalent taste for white and gold; for one is at a loss to understand what people can admire in a decoration without colour, since there cannot possibly be any artistic merit in such work. The old decorations have been repainted by Messrs. Green & King, and some of the worst parts painted out and better designs executed by their artist, Mr. Devilder. The whole as it now appears is certainly a very pleasant effect of colour, showing most thoroughly the superiority of flat to relief decoration. It is a great pity the design prepared by the above-mentioned firm for a proscenium frame has not been carried out. It possessed the merit of wholly expressing the constructive idea of a frame, viz., horizontal and vertical beams, with the extra support of a corner plate set inside to strengthen the framing. But it appears the house architect possesses a certain traditional right to design all alterations he pleases; and my especial business in writing this letter to you is to inform the architectural public at large that neither the decorators of the establishment nor the scenic artist are in any way responsible for the frame now put up. Of the taste thereof I will not speak: the artistic public will judge. The horizontal and vertical sides of the frame run into one another by a curve: thus there is one continuous, unbroken moulding. It has the appearance of a badly-constructed stone arch without capital. As it now is, it is neither arch nor frame. Had even the corners been cut diagonally, we should have yet had something approaching a wood construction."

GEOMETRICAL PROBLEM IN GOTHIC ARCHITECTURE.

We have received several demonstrations of Mr. Tarn's problem, p. 221, *ante,* and give the following from Halifax:—

Put DO$=\beta$: radius of wheel circle$=r$, and AB$=$XE$=6\,a$.

Then $(6\,a+r)^2=(7\,a)^2+\beta^2$

And $(6a-r)^2=(3\,a)^2+\beta^2$

Or $36\,a^2+12\,ar+r^2=49\,a^2+\beta^2$

And $36\,a^2-12\,ar+r^2=9\,a^2+\beta^2$

By subtraction: $24\,ar=40\,a^2$

$\therefore r=\frac{5}{6}\,a$

And $6\,a-r=\text{BO}=6\,a-\frac{5}{6}\,a=4\,a+\frac{1}{6}\,a$

BO therefore $=\frac{2}{3}+\frac{1}{6}$ of $\frac{1}{3}$ of AB.

Q. E. D.

TRIMMING SLATES.

I was pleased a short time since to observe the manner in which some slaters were "punching" *two* slates, for one, under the usual mode; which old mode consists of marking with a gauge the slates where they have to be punched (this takes quite as long as the punching). Their new mode of operation was to sit astride a plank, nail two pieces of wood thereon at a given distance apart, say 10 inches for duchess: in this manner they knew instantly when to punch the slate. I think if you were to make this known it would be of service to the trade. The men said it was their "patent."

L. F.

REGENT'S PARK ORCHESTRA.

I have seen with much pleasure the orchestra in course of erection in the Regent's Park. When in Paris last summer, I was much struck with the admirable arrangement of the chairs round the band, which in the afternoon performed a choice selection of music in the Tuileries Gardens. They were ranged *in the form of an amphitheatre,* with passages left at intervals for the ingress and egress of the public; each entrance being guarded so as to keep out children unattended by their parents or nurses. Each person occupying a chair paid two or three sous for the accommodation, and thus was enabled to listen to the music with comfort, while those who only attended for promenade had ample opportunity for so doing, and listening to as much of the music as they thought proper. I would propose a similar arrangement for seating the public round the orchestra in the Regent's Park, and I feel assured it would obtain approval if a trial were made.

By the present system, or rather want of system, the chairs are so placed that the noisy children and unmusical portion of the public walk and run in between them so as to utterly prevent the sitters from enjoying the sound of the music and the sight of the orchestra. If you think this suggestion worthy of notice, will you spare a corner in your forthcoming number, as time presses; and unless the Government have their attention called to the matter before the orchestra is completed, I fear they will refuse to take it into consideration this season.

Eagle Eye.

ROTHERHAM WATER BILL.

SIR,—I presume it is another of Mr. Hawksley's "theories" to suppose that your readers will be content to have "dust thrown in their eyes" by diverting their attention from the real question at issue. I confess I have more confidence in their common sense. If Mr. H. will refer to my letter, and read it carefully, I hope he will be able to discover that I never accused him of giving any evidence "relating to the Worksop waterworks." This would have been an absurdity on my part, inasmuch as in my letter I distinctly say we have *no waterworks* in Worksop. Will Mr. Hawksley say that he did *not*, in his evidence before the Committee of the House of Commons *on the "Rotherham Water Bill,"* say that the consumption of water *in Worksop* was eighteen gallons per head daily?

My remarks in reference to deodorizing works were simply to show that works may be constructed, by those who understand such matters, for 1s. 6d. per head, in contrast to Mr. Hawksley's estimate of 5s. per head.

I can only say that I never intended "to propagate a manifestly slanderous imputation," unless my attempt to show how little reliance can be placed on the evidence of some even professional men, can be so construed.

I did not conceive that I had anything to communicate to Mr. H. individually, which might not be equally beneficial to the public; or, at least, to those who are in the habit of giving evidence on such matters.

ROBERT WHITE
(*Clerk to the Worksop Local Board of Health*).

THE CUPOLA.

At page 257 Mr. Wigley is reported to have made the astounding assertion that the "cupola was to be found in many of the churches of the East: *it was borrowed from the Arabs*; and afterwards introduced into Southern Europe." Will Mr. Wigley be so obliging as to state the grounds for this paragraph, and also what modification he thinks should be made in his remarks upon the word "basilica?" Does he mean to deny by inference that the basilica was the type of all Christian churches?

G. V. R.

FOURTH BLOCK OF IMPROVED DWELLINGS IN LEEDS.

THE society established two or three years ago for the erection of improved dwellings for the working classes of Leeds have resolved to commence a fourth block of houses of a substantial, healthy, and well-ventilated character. The first block of ten model dwellings was erected at Beeston-hill, the cost to the purchaser being about 150*l.* each. Last year other eight houses were built on Burley Lawn, the cost being about 160*l.* each; and the society are at present engaged in building another block of fifteen houses in Langham-street, new Wortley, which are expected to cost about 142*l.* each. All the two first blocks of houses have readily been purchased, and part of the third block are bespoke, but the want has been felt of similar improved dwellings in a more central position, and these are now about to be provided by a fourth block of eighteen houses in Meadow-lane. These houses are intended for a numerous class of men whose occupations render it impossible that they can reside in the suburbs of the town. The estimated cost is from 180*l.* to 190*l.*; and each house will be provided with every convenience usually found in the best "through" houses. There will be a garden in front, and also a back yard and other conveniences, with a promenade round the entire estate. On the ground floor there will be kitchen and sitting-room or parlour, the former being 16 feet 9 inches by 13 feet, and the parlour 13 feet 4 inches by 13 feet 5 inches; the passage being 3 feet wide. Upstairs there are to be two bedrooms, one of which may be made into two. This room is 16 feet 9 inches by 13 feet, and the smaller one 13 feet 5 inches by 13 feet. The basement will contain a large scullery, pantry, and coal-cellar. The rooms will be lofty and well ventilated, and will contain every convenience for the comfort of the future inmates. Of the eighteen houses, sixteen are already taken, and the deposits, amounting to 500*l.*, paid; and, for the remaining two, purchasers will no doubt be found before the houses are finished. Additional land has been secured; and the committee are prepared to extend the scheme, should they find there is a desire that they should do so. The society have no wish to make a profit, their object simply being to enable the working classes to obtain better and more healthy houses for themselves upon easy terms. Supposing a man can make a deposit of 40*l.*, the remaining sum necessary to complete the building, say 120*l.* to 140*l.*, would be advanced by a building society. He can then enter into possession; and, by a payment of 5s. or 5s. 6d. a-week, or a little more than what he would otherwise have to pay for rent, in thirteen years and a half he would become entitled to the house; and as, during that time, he would have nothing to pay for rent, he would practically obtain a good substantial dwelling for the original deposit, exclusive of interest upon this sum. We observe that this society also has adopted the axiom—"As the Homes, so the People,"—an axiom which, notwithstanding its translation and use in the French language, and its re-translation back again into English from its French rendering, originated in the *Builder*.

MONUMENTAL.

A PORTSMOUTH correspondent of the *Hampshire Independent* says:—"I hasten to make the public acquainted with a design for a monument to the memory of the late Admiral Sir Charles Napier, which has just been submitted to a committee of gentlemen, who have gathered 250*l.* in this borough for the purpose of erecting a monument to the memory of the gallant admiral. The design is as follows;—A square basement of Portland stone, and a slender shaft of red granite, rising to the height of 28 feet; and upon the summit of the shaft a colossal figure of a lion. Could any man frame anything to look worse? We may really expect next to hear of a brazen elephant stuck upon the top of a flag staff. The very idea of a shaft only 12 inches in diameter, surmounted by a lion 7 feet in length from tail to snout, is enough to sicken one. It is, however, a fact that the committee have expressed their approbation of the design, and propose to erect it on the Southsea Esplanade. I feel bound, however, to state that the architect is not a Portsmouth man, but a gentleman who replied to an advertisement which the committee inserted in a Birmingham journal."——The excavations at Wotton-under-Edge for laying the foundation of the Tyndal memorial were commenced on the 9th instant, on North Nibley Hill, under the superintendence of the architect, Mr. Jackson, of Uley. ——Mr. Woolner has been commissioned to execute a colossal statue in bronze of the late W. Godley, founder of the Canterbury Settlement, New Zealand; to be erected in the centre of the Cathedral-square, Christchurch, New Zealand.

PROCEEDINGS UNDER THE METROPOLITAN BUILDING ACT.

RE INSUFFICIENT WORK.

AT the Worship-street Police-court, a summons was taken out by Mr. Johnson, the surveyor for the east district of Hackney, under the first schedule of the Building Act, against, Messrs. Skinner, Brothers, of Clapton and South Hackney, builders and contractors, alleging that the recesses in two houses building by them in Terrace-road, South Hackney, were larger than allowed by the Act, and alleging also that two piers were built with insufficient bond.

The case was first gone into on the 24th March, when the plaintiff, after a cross-examination withdrew that part of the charge relating to the recesses, and admitted they were not too large, unless the piers, which he complained were built with insufficient bond, were pulled down. He said he had acted upon the written intimation of a discharged workman of the defendants, and in his evidence stated that the piers were built 9 inches and 4 inches without any tie or bond together. He stated also that he had pulled down one pier 18 inches from the top, which was denied by the defendants, who stated that he only loosened a small portion and pushed it back into its place.

For the defendants Mr. Angell called two surveyors, Mr. Gliddon and Mr. Chantrell, who deposed that they had caused the pier in question to be pulled down 2 feet from the top, and they had found it was properly bonded together for that portion.

The magistrate considered that he had evidence before him that 18 inches of the 2 feet had been pulled down and rebuilt; and was not satisfied that the remainder of the pier was properly bonded. He therefore adjourned the case till the 1st inst., in order that a disinterested surveyor might examine the work and report to him; the plaintiff to give to the defendants twenty-four hours' notice.

The plaintiff accordingly appointed Mr. Wales, of Cassland House, to examine the work, who did so on Tuesday last. He had the whole of one pier pulled down 4½ inches thick, and a small portion of the second pier.

At the adjourned hearing,—

For the plaintiff, Mr. Wright, surveyor, of Hampstead and the City, was called, and stated that he was present while the work was being pulled down and examined by Mr. Wales. In witness's opinion, although there were headers binding the 9-inch to the 4-inch work, there were not sufficient of them, and the work was not properly bonded. In cross-examination, he said he did not attend the examination of the work professionally, but as a friend of the district surveyor.

Mr. Angell, previous to calling for the defence the surveyors who were present at the examination of the work, dwelt on the varying statements made by Mr. Johnson. First, he alleged that the recesses were too large and then abandoned the charge. Then he stated that the work was wholly without bond, while the evidence he would produce to-day would prove that it was not only bonded, but properly so. The case had been adjourned that an independent surveyor might examine the work; but the plaintiff failed to produce him. That fact would justify them in the conclusion that the evidence of Mr. Wales, if he had been there, would be against the plaintiff.

Mr. Cooke interposed, and said he would save the necessity for calling witnesses. The onus of proof in a case like this rested on the plaintiff; and in his (Mr. Cooke's) opinion, Mr. Johnson had not proved that the work had not been properly done. The summons would therefore be dismissed. On application for costs, Mr. Cooke said he thought it was not a case in which he could give costs, as it would imply censure on the district surveyor.

RECOVERY OF ARCHITECTS' CHARGES.

HORNBLOWER v. BIDDER.

THIS was an action tried at South Lancashire Assizes, before Mr. Baron Martin. The plaintiff was an architect, carrying on business in Liverpool; the defendant a gentleman who wished to have a house built at Mitcham, near London. The way in which the litigants were brought together was from the plaintiff having built a house at Southport for a friend of the defendant, and which the defendant admired. After considerable correspondence had taken place, the defendant instructed the plaintiff to draw plans, make out a specification, and prepare the quantities for persons desirous of tendering for the work. The amount of even the lowest tender very much exceeded the expectation of Mr. Bidder, whose wife had suggested many alterations from the plans originally contemplated by Mr. Hornblower. When the prospective expense of the building was ascertained the project was dropped, and the brother of the defendant wrote to the plaintiff requesting that his account might be sent in, that he might forward it to the defendant, who was expected shortly to return from France. The plaintiff stated in evidence that he had built a house for a Mr. Brown, at Southport, and was requested to send for inspection, by the defendant, the traces of his plans, the copy of the contract, and other particulars as to the erection and cost of Mr. Brown's house, which he did by railway. Mr. Brown's house cost 2,500*l.*, and Mr. Bidder requiring a mansion twice the size of that, the plaintiff said that, of course, such a building would cost twice as much. Mr. Hornblower, having never built any house at Mitcham, was not prepared to fix any definite sum, but formed his opinion from the result of his experience in Lancashire and adjacent counties. The plans specifications, working drawings, quantities, &c., were completed and delivered in March, 1860. The London tenders were sent in, one of which was 11,384*l.* Mr. Parker, a Liverpool builder, sent in a tender for 9,000*l.* When a negotiation between Mr. Parker and the defendant was entered into as to the work to be done, the latter offered certain land contiguous to that on which the new house was to be built in part payment, but that offer was declined and the negotiation broken. Under cross-examination the plaintiff admitted that the defendant had repeatedly expressed his wish that the cost of the building should not exceed 5,000*l.*; but Mr. Hornblower told him the work required could not be done for the money specified. Re-examined: The plans were frequently altered and enlarged at the suggestion of Mrs. Bidder, the defendant's wife. Several witnesses were called to prove that the charges of the plaintiff were such as the profession usually made. Mr. Brett, Q.C., assisted by Mr. Jones, appeared for the plaintiff, and Mr. James, Q.C., assisted by Mr. Conway, conducted the defence. Counsel for the defendant, after addressing the jury, called witnesses to prove that the plaintiff positively agreed to build the house in question for a sum not exceeding 5,000*l.*, and that it was on that ground only that he was employed. The defendant and his brother were called, and they both stated that the conditions on which plaintiff was engaged was that the cost of the house contemplated by the defendant was not to exceed 5,000*l.* His lordship having summed up, the jury found a verdict for the plaintiff, damages 652*l.* 19s. 4d.

Books Received.

A Dictionary of Chemistry and the Allied Branches of other Sciences. By HENRY WATTS, F.C.S. London: Longman & Co., 1863. Parts I. and II.

ALTHOUGH Ure's Dictionary of Chemistry and Mineralogy has been made use of by the editor and compiler, this work must be regarded as essentially a new one, since the advancing changes in chemistry necessitated the rewriting of the greater portion of it. To this end the editor, who is himself a very competent hand at such a work, both

as a man of science and as a writer, being the editor of the Journal of the Chemical Society, is assisted by no less excellent authorities, among whom we observe Professors Hofmann, Frankland, Odling, Atkinson, and Roscoe. And that these names are not merely made use of in an indefinite way to enhance the repute of the work is assured by the fact that the respective articles contributed by each has his initials attached. There is no doubt of the importance and value of such a book; and if the two parts already published be any criterion of the manner in which the whole will be done, as we have no doubt it is; this work will be both an elaborate and an accurate one, in which the present state of chemistry will be fairly represented.

Miscellanea.

Wandsworth Working Men's Club.—W. B. Linfield writes,—We have succeeded in establishing a cricket club among the members of the above, for their recreation during the summer months; and this we think will induce many young men to join the working men's club. They can belong to both for the small sum of 2d. per week.

American Scenery and Studies.—Messrs. Foster & Son, of Pall-mall, are about to sell a large number of Mr. Cropsey's pictures of American scenery, in consequence of the return of the artist to America for a time. There will be a private view of them on the 25th, and the sale will take place a few days afterwards. The collection includes many very charming studies, which, being small, will fall within the reach of moderate buyers.

Royal Horticultural Society.—The azalea and rose show of this society took place on Wednesday. The plants were in excellent condition, and the weather was all that could be desired. First prizes were awarded to Messrs. Veitch & Son, Exeter and Chelsea; to Mr. Thomas Todman, gardener to Mr. R. Hudson, Clapham-common; to Mr. Charles Turner, Slough; to Messrs. Paul & Son, the Old Nurseries, Cheshunt, Herts; to Mr. H. Lamb, gardener to Captain Cahill, Southall, Middlesex; to Mr. J. Butcher, 1, South-street, Camberwell; and to Mr. William Bull.

The Founder of the Railway System.—The committee of the United Kingdom Railway Officers' and Servants' Association, London, state that it has long been considered most desirable that there should be a national demonstration in honour of the founder of the railway system, and they thought that no better day could be fixed on than the anniversary of the birth of that eminent man; and that instead of erecting a statue, it would be better to raise a fund to be called "The George Stephenson Fund," out of which to grant assistance and annuities to the members of this association, who from accident, old age, or other emergency, may be unable to perform their duties. The Lord Mayor of London, one of the vice-presidents, has expressed his approval, and has given the use of the Egyptian Hall, Mansion House, for the purpose. Some handsome sums have already been paid and promised, which, with others that may be sent in before June 9th, will be announced on that day.

College of the Ladies' Sanitary Association.—A College of the Ladies' Sanitary Association has been opened for the purpose of affording instruction to ladies in the laws of life and health. The committee of the Association state that they feel strongly the importance of providing such instruction for women on whose personal exertion and influence the accomplishment of all domestic sanitary improvements must ultimately depend. To carry out this object courses of lectures have been instituted for the instruction of ladies engaged in education, district-visiting, and like pursuits, as well as for all others who desire an acquaintance with the elements of physiology and chemistry, and their application to the preservation of individual and public health. The lectures will include three subjects,—Chemistry, by Dr. Wood; Physiology, by Mr. Marshall, F.R.S.; and Public Health, by Dr. Richardson. The fee to any single course for one term will be 1*l.* 1*s*; fee to the members of the Association for the three courses for one term, 2*l.* 2*s.*; fee to ladies' schools, for six tickets, 3*l.* 3*s.* The secretary is Miss E. S. Griffiths, office of the Ladies' Sanitary Association, 14*a*, Princes-street, Cavendish-square, W. The printed announcement is signed Georgina Cowper, president; Elizabeth Sutherland, Janet Chambers, honorary secretaries.

Institution of Civil Engineers of Ireland.—A general meeting of this institution was held last week in the Museum Buildings, Trinity College. Dr. Downing, vice-president, gave an account of the works for the restoration of the Middle Level drainage, the discussion on which was postponed.

Prince Napoleon's Mansion, Paris.—Some surprise has been created in Paris by the announcement in the papers that the Greco-Roman mansion constructed by Prince Napoleon in the Avenue Montagne, Champs Elysées, is to be offered for sale by auction on the 9th of June next. The upset price is fixed at 900,000f. (36,000*l.*).

Warrington School of Art.—The students of this School of Art have unitedly subscribed for and presented to Mr. Thomson a handsome drawing-room time-piece on the occasion of his marriage, and in testimony of their appreciation of his services as the head of the Warrington School of Art.

Liverpool Architectural Society.—At the fortnightly meeting of this society, held on Wednesday evening, at the Royal Institution, Colquitt-street, Mr. W. H. Weightman presided. A second part of "Notes on Rome and her Edifices," was read by Mr. W. H. Picton, who described the architectural properties of the principal ancient and modern builings in the Eternal City. A discussion followed, in which Messrs. Kilpin, J. A. Picton, the chairman, and Mr. Hay took part, after which the meeting adjourned.

Glasgow Architectural Society.—A meeting of the Glasgow Architectural Society was held on Monday night, in the Scottish Exhibition Rooms, Bath-street. The chair was occupied by Mr. Alexander Thompson, president of the society, and there was a numerous attendance of the members. Owing to the society being engaged the whole evening in the discussion of some preliminary business, the reading of a paper "On Paisley Abbey and its Restoration," was postponed to the next meeting.

The Mid-Level Compensation Case.—A Norwich special jury, under the presidency of Lord Chief Justice Earle, have been engaged for five days in investigating an action—Coe *v.* Wise, clerk to the Mid-Level Commissioners, for negligence in not making and maintaining the outlet sluice of the Mid-Level, by reason of which the tidal waters broke through and ran over the sluice, submerging the plaintiff's land. The importance of this trial may be estimated from the fact that no fewer than 107 compensation claims, involving 70,000*l.* damage, have been awaiting its decision. At the close of the trial, the Lord Chief Justice put it to the jury,—First, was damage caused to the plaintiff by the absence of due care and skill on the part of the defendant in making the sluice; secondly, in maintaining the sluice; thirdly, in providing remedies against mischief after the sluice was destroyed; and, fourthly, by reason that no puddle clay wall was made along each side of the banks of the cut?—The verdict was declared for the defendant on the first issue, and for the plaintiff on the last three issues;—virtually a verdict for the plaintiff. The question of damages is to be settled out of court.

Registration of Births and Deaths in Ireland.—Sir Robert Peel's Bill has now passed both Houses of Parliament. Its general features, according to the *British and Foreign Medico-Chirurgical Review* for April, are the same as those of the English Act; and, like that, it is based upon the Poor-Law machinery. The registration of marriages is not included. Parents or others must give notice of births, so that the registration of births will be in some measure compulsory. Certificates of the "cause" of death must also be given by the medical attendants of those who die. This is not left, as in England, to the goodwill and public spirit of the medical profession, but is to be enforced by the Act. True, no penalty for disobedience is mentioned, but a refusal to "fill up and return" the certificate will be a misdemeanour, and as such punishable by law. The endeavours of the British Medical Association, and the Social Science Association, to improve the Bill have not been successful, and for the present red tape is triumphant. If the public-health movement now commencing in Ireland should spread as it has done here, the defects of the registration machinery, as remarked by the *Chirurgical Review*, will become as apparent there as they have long been to us. It now only remains for the scientific bodies—if they are in earnest—to seek to introduce gradually into the English system those reforms which have been for three years proposed by the Social Science Association, and sanctioned by the most competent judges.

Architectural Association.—The annual *conversazione* will be held this, Friday evening, at the House in Conduit-street.

Lectures; Architectural Museum.—On Tuesday evening next the Very Rev. the Dean of Ely will lecture on the Ely Lantern. It ought to be known that the lectures here commence this session at *half-past seven* o'clock, not eight, as heretofore. Cards of admission can be obtained, free, at our office.

Blackburn: Borough Surveyor.—The Borough Surveyor of Blackburn, Mr. Brierley, after nearly six years' service, has resigned his office, and has been appointed engineer to the corporation, it being considered desirable to retain him to continue to completion the sewerage and other improvement works now being carried on.

Busts of the Prince and Princess of Wales.—The Crystal Palace bust of the Princess now being issued finds favour with many, and is certainly a very agreeable work.——Mr. Brucciani, of Russell-street, Covent Garden, has sent us a pair of busts of the Prince and Princess, just published by him: that of the Princess is the better of the two.

Withernsea.—How to Restore.—In a recent gale one of the four pinnacles of the tower of the restored church at Withernsea was blown down. A parish meeting was called to determine upon the best course to be taken in consequence of this disaster. There was a long and (for Withernsea) an animated discussion; and ultimately it was resolved—what does the reader think?—"To put the pinnacle up again, of course," he will exclaim. Nothing of the kind. It was gravely resolved—"That *the three pinnacles still standing should be taken down!*" And this resolution has actually been carried out in the present week. The correspondent who forwards this adds: "It is only about three or four years since the church was restored, which makes the affair even worse."

The Metropolitan Railway and Claims for Compensation.—The Report of the Board of Trade on the bill introduced for the extension of the Metropolitan Railway, and to enable the Company to purchase additional lands, states that section 12 of the bill provides that in cases of claims for compensation against the company, under the 68th section of the Lands Clauses Act, if the claim exceed 50*l.*, and the amount be settled by arbitration, or a jury, at the sum, or less than the sum, offered by the company, the claimant shall be liable to all the costs of and attendant upon the arbitration or settlement by a jury, unless the arbitrator or the jury otherwise determine. This, it is reported, is a departure from the provisions of the Lands Clauses Act, under the 34th and 53rd sections of which, in the same circumstances, the costs of the arbitrators, or of the inquiry by a jury, would be borne by the two parties in equal proportions, and each party would bear his own costs incident to the arbitration or inquiry. The grounds for such proposed departure from the general law appear to require consideration.

Illumination of English Embassy House, Paris.—On the occasion of a banquet given by Lord Cowley, in Paris, in honour of the marriage of the Prince of Wales, the gardens were illuminated and decorated with crystal glass in emblematic colours on the system which has been carried out by Messrs. Defries & Sons. The centre device represented the Arms of the Prince of Wales within a garter, containing the words Albert and Alexandra, in blue and white crystal glass, and surrounded by laurel leaves, supported on either side with the flags of England and Denmark, united with a true lover's knot: on the right and left hand sides were the monograms A. A., encircled with a garter of prismatic coloured glass, and surmounted with the Royal Crown of England, above which were two very large Brunswick stars, the centre containing the Cross of St. George, with the motto, *Honi soit qui mal y pense*. These stars were manufactured of cut crystal glass, and contained upwards of 3,000 pieces. Under the centre were the initials of the Emperor and Empress, and supported on either side with the flags of France in their true colours, executed in crystal glass, under which were festoons of crystal glass, looped up by means of amber crystal tassels and cords to a band of gold-coloured glass, 50 feet long. Immediately over the centre were the words, "Long live the Prince and Princess of Wales," surmounted with a plume of feathers 9 feet high, over which were the words, in 2 feet crystal letters, "God save the Queen," above which were displayed the Royal Arms of England, supported on either side with the flags of England and Denmark.

SOUTH KENSINGTON MUSEUM.—During the week ending 11th April, 1863, all free days, 20,076 persons have visited the museum.

ST. DENIS.—The French Emperor has given orders that the works for the restoration of the Abbey of St. Denis, which were suspended for a time, shall be recommenced with increased activity. The church is to be "restored" in every part.

JOINERS' STRIKE.—A number of the journeymen joiners in Dumfries are at present out on strike. It appears the men have demanded from their employers that in future they drop working on Saturday afternoon at two o'clock,—but that no reduction is to be made in their wages, the general rate at present being 21s. per week.

NEW READING-ROOM AT THE PUBLIC RECORD OFFICE.—Preparations are being made for the application of the Parliamentary grant of 20,000*l*., portion of a total estimate of 30,000*l*., for the purpose of adding a south-western wing to the Record Repository on the Rolls estate, Fetter-lane. It is intended in the new block of buildings to erect a reading-room for the special accommodation of the literary searchers, modelled on the plan of the room at the British Museum.

SCHOOL DESKS AND SEATS.—Messrs. A. & R. Dennett & Co. write:—"Will you allow us to inform A. Williams (named in your impression of April 4th, as having patented a desk and form that will, by the use of iron rods as specified, either form a writing-desk, form with back, or dining-table at pleasure), that we have for the last twelve years been constantly making the same identical thing, and have had a model of same in the South Kensington Exhibition for several years. We hope A. W. has not been at any great expense in getting the patent."

THE IRON AND COPPER TRADES OF LAKE SUPERIOR.—The iron trade of Lake Superior is growing in importance. During last year 115,721 tons of iron ore and 8,500 tons of pig-iron were shipped for market. The value of rough copper shipped from the same region in 1862 is stated at 4,000,000 dollars. The yield of the copper mines of the district during the year 1862 amounted to 9,000 tons of ore; being a decrease of more than 10 per cent. as compared with the preceding year. This decrease is, however, partly compensated by the higher produce of the ore.

DISCOVERY OF ROMAN TOMBS AT CAMBRIDGE. The local *Chronicle* announces the discovery of some interesting relics about half a mile from the Via Devana, or Huntingdon-road. Workmen, in digging for the black nodules called coprolites, which are converted into manure, came upon a stone tomb, with its tenant, and the usual accompaniments of vases, glass bottles, pottery, and the like. The sarcophagus is made of great oolite, seemingly Barnac stone, and contains the skeleton of a female. Another stone coffin has since been met with, containing a male skeleton, but the stone was so rotten that it has unfortunately been almost destroyed by the workmen's picks. The perfect one has been safely removed to the Anatomical Schools.

ARCHÆOLOGICAL INSTITUTE. — An ordinary meeting of the members of this institute was held on Friday afternoon in their rooms in Suffolk-street; the Rev. Dr. Bock in the chair. The first paper was a communication to Mr. Way, reporting the state of progress of the excavations at Wroxeter, from Dr. Johnson, one of the excavation committee. In some few diggings that had been made, the site of the town-hall was found, and the cemetery, the extent of which was traced. Among the articles found were some blown glass, so well manufactured that it might be mistaken for the work of recent times. Mr. Baker then read a paper describing the results of some researches among the ruins of Beaujeau Abbey, and the discovery of the supposed tomb of Isabella, the first wife of Richard Duke of Cornwall, the King of the Romans. Dr. Bock mentioned some curious facts relating to the silver crown with which the King of the Romans was crowned. It is now at Aix-la-Chapelle; and it appears from the researches of a Dr. Boch, a German, whom the Emperor of Austria has commissioned to examine the imperial archives, that the crown was made in England by English workmen, and was carried to Germany by the Duke of Cornwall to be used in his coronation. The same silver crown was afterwards used in crowning the Emperors of Germany, who were crowned at Aix-la-Chapelle, first with the iron crown, then with the silver crown, and afterwards at Rome with the golden crown by the Pope. Dr. Bock cited instances to prove that English workmen were generally employed for the execution of the choicest works in the Mediæval period.

THE "NORWICH GATES."—The gates have been presented to the Prince of Wales. In accepting them his Royal Highness said,—"Connected intimately as I am with Norfolk, I regard with pride so beautiful a specimen of Norwich workmanship and art, and this feeling adds to the pleasure I could not fail to experience in accepting any offering made by a large body of persons belonging to every class, but animated by a common feeling of affectionate good-will towards myself and the Princess."

AN OIL WELL IN WALES.—An interesting discovery has just been made at Blaina, Monmouthshire. As one of the persons employed by Mr. Lewis, a contractor, was pumping water from a well on his master's premises, he noticed oil on the surface of the water. Oil and water continued flowing for some time, and about four gallons of oil were ultimately obtained. Excavations in the vicinity of the well show the soil to be of that boggy nature which is usual where oils are found. It has been determined to have the spring fully explored.

CITY HOUSE PROPERTY AND CITY IMPROVEMENTS.—On Saturday, at the London Sessions, a compensation case was tried in reference to a public-house, known as the Wellington, at the corner of Seething-lane, Tower-street, and a house adjoining, required by the corporation to be pulled down for the purpose of improving that thoroughfare. For the claimants several surveyors were called who valued the property at from 7,700*l*. to 8,000*l*., whilst for the City it was contended that for so small a space the utmost value was from 4,800*l*. to 5,000*l*. The jury took the medium course, and awarded 6,600*l*.

WORKING MEN'S HALL, SHREWSBURY.—This new building has been opened. Mrs. Wightman was the originator of this building. A little book, entitled "Haste to the Rescue," was published by her, and soon met such a sale as to realize the sum of 700*l*., which she appropriated for the building of a hall for working men. Her efforts were largely seconded by the public, and the result is a building, which a little further stretch of public liberality will make freehold property. The style of the building is an adaptation of the Italian Mediæval. It is of red brick, with particoloured brick and stone dressings, and encaustic tiles; marble shafts to the window and porch columns. It has a frontage to Princess-street of 36 feet, extending backwards to College-hill, 125 feet. The entrance is by a recessed porch in the tower, which is 65 feet high to the summit of the roof. The basement contains baths and lavatory: there are rooms for night schools; a reading-room for a library, where papers and periodicals will be supplied; a room for friendly societies; and a large common room where coffee, &c., will be supplied. There is also a large lecture-hall, where the weekly meetings of the institution will be held. This room is 66 feet long, 42 feet wide, and 23 feet high. Mr. Treasure, of Newport, erected the building, according to the plans and specifications of the architect, Mr. Randal, of Shrewsbury, for the sum of 3,120*l*.

THE BICENTENARY MEMORIAL.—The first annual meeting was held at the Manchester Town Hall, on Thursday in last week. Mr. Abraham Haworth presided, and said that they intended erecting in Lancashire thirty chapels to commemorate the bicentenary of nonconformity. The memorial fund amounted to 196,000*l*. Mr. G. Hadfield, M.P., had initiated a local fund, to which he gave 3,000*l*. for chapel extension in Lancashire and Chesire, and 17,567*l*. had been raised for this object. There had been four chapels completed and opened during the past year, namely at Bolton, Clitheroe, Lytham, and Southport. There were six chapels in course of erection, at Barrow-in-Furness, West Derby, Lymm, Morecambe, Preston, and Woolton. The nineteen chapels contemplated, for which sums were reserved until the plans were approved, were at Adlington, Ashton-in-Makerfield, Dukinfield, Bolton, Bollington, Kirkham, Liverpool (3), Longridge, Manchester (3), Moorside, Oldham, Royton, St. Helen's, Stubbins, and Tottington. The entire outlay upon the thirty chapels, when completed, including the local subscriptions and the grants of the committee, would be at least 100,000*l*. The committee had assisted in the examination of sites, plans, specifications, and trust-deeds of the chapels. Kindred societies to this occupied other spheres. Statistics, which had been carefully compiled, showed that the amount expended in Great Britain and Ireland during the year 1861, on congregational chapels, schools, and colleges, was not less than 215,000*l*.

PARIS.—Workmen are now actively engaged in preparing two large rooms at the Louvre, on the side towards the colonnade, formerly occupied by the Spanish Museum, to receive the paintings of the Campana collection. Workmen have likewise been employed for some days in taking mouldings of the sculptured ornaments of the long gallery of the Louvre, to serve as models in the outside decorations of the new buildings of the Tuileries.

THE *Morning Post*, September 29, speaking of Benson's Watches in the Exhibition, says :—"The collection of watches shown by Mr. Benson is a large, and at the same time an interesting one, and considerable attention has been paid by the exhibitor to the decoration of the cases. Many of them are extremely elegant in the design, and were the results of prizes offered by Mr. Benson to the pupils of the South Kensington School of Design." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. Benson, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

GREEN AND BLUE SLATE.—It was announced by the *Mining Journal* that "A company is in course of formation by Mr. Lee Stevens, for working Slate Quarries at Llanfair, Merionethshire, under more than ordinarily advantageous circumstances," and which describes the vein of Green Slate to be of the extraordinary thickness of above 200 yards. On this subject the *Times* (April 8) states that "An unparelleled demand for Slates exists at the present time, and so greatly exceeds the supply that all the Slate Quarries which have been for years abandoned in the districts of Harlech, and other parts of Merionethshire, are now being again worked with most hopeful expectations." The general demand, in fact, for Blue Slate is so much in excess of the supply, that cargoes are occasionally sold at 1*l.* per ton profit on the invoice price; and the absolute want of Green Slate for Government and other first-class Buildings is so great that the time cost is about twice that of the quarry-rates for the Blue Slate, which have recently advanced 10 per cent. In short, these are expected to be amongst the most profitable Slate Quarries in Wales. Of the Llanfair Quarries, the *Mining Journal* also says, "Both the veins of Green and Blue Slate rise to a considerable altitude above the level of the sea; they can be worked without machinery, by driving levels into the side of the hill, through which the produce may be inexpensively obtained; and the shipping place of Pen-y-groes being within less than a mile of the Quarries, the Slate can be conveyed on board at 1s. per ton. Under these circumstances, we anticipate that the immediate subscription for shares, which is in progress, will be shortly closed." Prospectuses and further information obtainable from Mr. LEE STEVENS, 36, CANNON-STREET, LONDON, E.C.—[Advt.]

ADVERTISEMENTS.

PARTNER. — WANTED, a JUNIOR PARTNER, in a building business of very long standing, in the provinces. Capital required, from 500*l.* to 1,000*l.*—Address, R. S Post-office, Sheffield.

DISTRICT SURVEYOR WANTED, for the Stockport and Hyde Divisions of the Hundred of Macclesfield.—The Highway Boards are prepared to receive applications from Candidates for the Office of DISTRICT SURVEYOR Persons applying must be practically acquainted with the management and repair of highways; and preference will be given to candidates who have served as, or under, professional surveyors of highways. The district consists of twenty-five townships or places, containing about — miles of highways. Applicants are requested to state the amount of salary they will expect, including travelling and all other expenses. Security will be required. The surveyor will have to devote the whole of his time to the performances of his duties, and to reside within the district. Applications and testimonials to be sent to Mr. JOHN LINGARD VAUGHAN, Clerk to the Board, at his Office in Stockport, on or before the 1st of MAY next. Applications to be marked outside, "District Surveyorship."

JOHN LINGARD VAUGHAN,
Clerk to the said Highway Board.

Stockport, April 2nd, 1863.

LAVENHAM HIGHWAY DISTRICT, SUFFOLK.—At a journal meeting of the Board of the above district will be held at the Swan Inn, at Lavenham, on TUESDAY, the 12th day of MAY next, at ELEVEN o'clock, a.m. prepared to receive sealed TENDERS from persons willing to undertake the OFFICE or SURVEYOR for the said district. Tenders, stating the amount of salary required, to be sent to the Clerk, at his Office at Lavenham, on or before NINE o'clock of the morning of the 12th of MAY. The Board will not be bound to accept the lowest or any Tender. Candidates to appear in person on the above named day. The above district consists of 33 parishes, and it is believed of about 420 miles, and 10,295 acres. The person elected as Surveyor will be required to reside in the district, and devote his whole time to the duties of the office.—By order of the Board,

Lavenham, April 9, 1863. RICH. NEWMAN, Clerk.

NEW ROMNEY HIGHWAY DISTRICT. SURVEYOR.—Candidates for the APPOINTMENT of SURVEYOR of the District are required to send in written Applications, addressed to "The Chairman of the Highway Board, New Romney," accompanied by testimonials of their qualification and respectability, on or before SATURDAY, the 25th instant. The salary is fixed at the rate of 150*l.* per annum; and the Surveyor will be required to reside in the District, and devote his entire attention to the duties of his Office, and will not be allowed to engage in any other business. Candidates are also required to attend at a meeting of the Board, which will be held at the Guildhall, New Romney, on MONDAY, the 27th APRIL instant, at TEN o'clock in the Forenoon.

HENRY STRINGER, pro tem. Clerk to the Board.

New Romney, 14th April, 1863

ROCHESTER HIGHWAY DISTRICT.—The Highway Board for the above District will, at their meeting to be held on the 9th day of MAY next, at the Bull Inn, at Rochester, at TWELVE o'clock, be prepared to receive APPLICATIONS from Candidates for the Office of DISTRICT SURVEYOR. A practical knowledge of the management of that part of Leadwood Level which is the District comprises 30 parishes, or districts, and about 250 miles of road. The yearly salary, including that for keeping a horse (which the Surveyor must provide for), his own mail, travelling and all other expenses, will be 200*l.* He will have to devote his whole time to the performance of his duties, and to reside within the district. Satisfactory security will be required. Candidates must state their age, and forward testimonials as to character, capability, to Mr. CHARLES MARTIN, the Clerk to the Board, at his Office in Strood, on or before the 1st day of MAY next. Applications to be marked "District Surveyorship." By order of the Board

Strood, 14th April, 1863. CHARLES MARTIN, Clerk.

WIMBORNE, DORSET. — To ROAD SURVEYORS.—A SURVEYOR is REQUIRED by the Highway Board of the Wimborne District. He must place the whole of his time and services at the disposal of the Board, and must be well acquainted with the general routine and duties of roads and road-making. The District comprises thirty-four parishes, area 17,248 acres, 211 miles of road, as returned by waywardens. He will be required to reside in some central position of the district, to be fixed by the Board.—Candidates must state their age, address, stating any qualifications, and amount of remuneration they may require, with references as to ability, to me, on or before the 1st of APRIL instant. The Board do not bind themselves to accept the lowest or any Tender, and desire not to be personally canvassed. Security for the due performance of the office may be required.

THOS. RAWLINS, Clerk to the Board.

Wimborne Minster, April 11, 1863.

The Vocal Music by Miss Fosbrooke, Miss Champion, Mr. Suchet Champion, and Mr. Chaplin Henry. Chorus, Lionel Brough, esq.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Second Testimonial:—"March 10th, 1859.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and are informed that it is to be adopted generally in the houses that are building or erected there."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY ROAD, LONDON.

Their sales now extend throughout Europe, America, Australia, and the East Indies, for these beautiful articles, which are superseding marble. Slate Slabs, Cisterns, Sinks, Filters, and Roofing Slates, always on hand. For further particulars apply at the Company's Depôt, 4, South Wharf road, Praed-street, Paddington, W.

SLATES.—MESSRS. JONES & CO. have a STOCK of SLATES of different sorts from the best quarries in Wales; also Slabs and Cisterns; delivered at any station in quantities of not less than five tons.—Price forwarded and estimates given on application.—Address,
No. 1, BOLD-TERRACE, CHESTER.

WANTED, about 250 TONS of OLD PAVING STONES.—Price and particulars to be forwarded to Office, Harrington-road, South Kensington.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—This valuable FREEHOLD ESTATE (land tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, and can be dug on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyances free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

TO BUILDERS, &c.—A PLOT of FREEHOLD BUILDING LAND for SALE, near the New Church, Cottenham Park, Wimbledon; also a PLOT, adjoining the Dunsford Villas, fronting the Merton road, Wandsworth, Surrey, containing nearly one acre each. For plans, &c apply to Mr. W. C. POOLE, 11, Great Smith-street, Westminster, S.W.

HENLEY-ON-THAMES.—BUILDING GROUND on the Banks of the Thames.—TO BE LET, on Building Lease, THREE PLOTS of GROUND, immediately adjoining the new road by the river side leading from Henley to the Great Western Railway Station. Two of the Plots have a frontage to the river of 117 feet and a depth of about 110 feet, and the other a frontage of 56 feet and a depth of 96 feet. The land is most beautifully situate, and commands extensive views of Park Place and the River, offering advantages for building first-class villa residences seldom to be met with.—Full particulars may be had of Messrs. COOPER, Solicitors, Henley-on-Thames; and Messrs. HEWS & SON, Estate Agents, Henley-on-Thames.

NEAR to LONDON BRIDGE and KING WILLIAM STREET.—TO BE LET, for 83 years, a valuable SITE for OFFICES. The ground has at present a building upon it. Light excellent.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street, City.

HYTHE, near FOLKESTONE.—TO BE LET, upon advantageous terms, the SEA FRONTAGE between the Martello Towers at this delightful watering place, upon Building Leases, in plots or the whole. There is an excellent site for an hotel, which is much required.—For particulars a building upon it. apply to W. F. DANGERFIELD, Esq Hythe, or Ashford, Kent.

TO BUILDERS and OTHERS.—Valuable BUILDING LAND TO BE LET, at Putney, on the main road near the Railway Station. Term, 99 years subsoil gravel. Advances will be made to respectable parties.—For plans and particulars apply to J. H. ROWLEY, Esq. Architect, 17, St. Helen's-place, E.C.

IMPORTANT SALE.—HENLEY-UPON-THAMES, Oxfordshire.—TO BE SOLD by PRIVATE CONTRACT, the valuable and beautiful ESTATE known as BADGMORE FARM, in the parish of Henley-upon-Thames. The Estate comprises 169 acres of excellent Arable and Grass Land, and 31 acres of valuable Wood Land. If no acceptable offer is made for the entire property, the Proprietor will not object to divide it into four lots, in which case—
Lot 1.—Would comprise a substantial brick-built Residence, with excellent farm buildings, and nine inclosures of arable and grass land, containing together about 100 acres.
Lot 2.—Three valuable pieces of arable Land, containing together about 27 acres. Part of these lands have a frontage to the road leading from Henley to Greys, and adjoin the Park of Badgmore House.
Lot 3—Two excellent pieces of arable Land, containing about 30 acres, and very valuable Wood Land containing about 17 acres.
Lot 4.—Two pieces of arable Land containing about 10 acres.
This Property, which lies on a beautiful slope near the town of Henley, overlooking the Fawley Court Estate, is admirably suited for the site of a mansion, the greater part of it being easily convertible into park ground, or, if divided, it presents many desirable sites for villas, to all which there are excellent roads. Lots 1 and 4 extend down to and have frontages the whole length of the Fair Mile; and the greater part of the Estate lies within a mile of the Henley Railway-station.—For further particulars and to treat for the same, apply to Messrs COOPER, Solicitors, Henley-upon-Thames, at whose office a plan of the Property may be seen.

HARROW.—To BUILDERS and Others. TO BE LET, on Building Leases, for 99 years, several Plots of FREEHOLD LAND, having frontage to main road, and a depth of 225 feet. Houses erected of the value of 50l. per annum and upwards obtain free first class railway passes from Harrow to London for eleven years.—Apply to Messrs. WHITE & DRUCE, Auctioneers, 1, Brook-street, Grosvenor-square, W.

BUILDING LAND TO BE LET or SOLD, at Sydenham, near the Church, the Railway Station, the Crystal Palace and Park. It fronts a wide, handsome roadway, and has ample depth for garden grounds. All the houses on the estate are of a good class, and the rents obtained give an average return of 12 per cent on the outlay. The remaining frontage will be let at a low rent, to secure the ground being speedily covered.—Terms and particulars of Messrs. EDWIN FOX & BOUSFIELD, Land Agents, 41, Coleman-street, Bank, E.C.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland yard, S.W.

NORWOOD.—Most eligible FREEHOLD LAND TO BE LET on Building Leases, facing the Main Road, suitable for the erection of superior Detached Villas.—Apply to Mr. B FLETCHER, Architect and Surveyor, 3, Bond-court, Walbrook, E.C

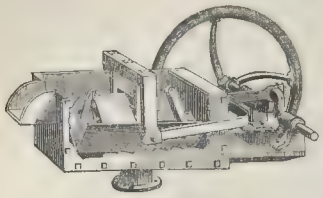
TO BE LET, on LEASE, several first-rate SITES for BUILDING, with beautiful views, three miles from Edenbridge Station Advances if required. Near two brick-yards.—Apply to JAMES HAIG, Esq. 4, Old square, Lincoln's inn, London.

TO BUILDERS and OTHERS.—TO BE LET, on a Repairing Lease, No. 34, PRINCES STREET, SOHO. For particulars apply to W. A. HOLCOMBE, Esq. 14, Warwick-court, Gray's inn.

TO BREWERS, PUBLICANS, BUILDERS, and OTHERS.—TO BE SOLD, a 90 years' Lease of an eligible SITE for a PUBLIC HOUSE, adjoining Cherry garden Pier. License already secured.—Apply, by letter, to Mr. W. G. CLIFT, Lucas & Spencer's Wharf, Bermondsey-wall.

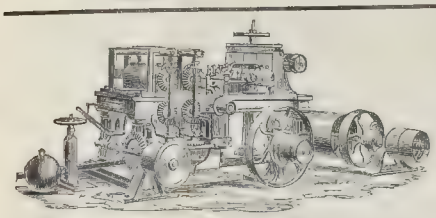
HIGH STREET, BOROUGH.—The long LEASE of a large HOUSE in the Borough, with a Building Site for Warehouses or Workshops in rear, TO BE SOLD. It is a free licensed publichouse, but the lease would be sold for any suitable business.—Apply at Estate Office, 21, Walbrook.

BUILDING LAND, MILE END.—TO BE LET on a BUILDING LEASE, a valuable PLOT of FREEHOLD LAND, situate in North-street, Mile end, suitable for the erection of either shops, dwelling-houses, or manufacturing premises. The Plot contains an area of nearly two thirds of an acre and has an extensive frontage. For terms and other particulars apply to Mr. S. JOSEPH, Architect and Surveyor, 27A, Buckingham, Chesapside, E.C.



LAYHAM, near HADLEIGH, SUFFOLK.—TO BE SOLD, by PRIVATE CONTRACT, a BRICK KILN in full trade, with an unlimited supply of capital brick and tile earth, 8 acres of productive arable and 4½ ditto of superior pasture land, with barn, shed, and two cottages, all in good repair, lying adjoining the high road, and within ¼ mile of the railway station. To brickmakers desirous of a profitable business the above presents an opportunity not often to be met with.—Particulars can be obtained on application to Messrs. NEWMAN & HARPER, Solicitors; or to Mr. JOHN BOWLER, Auctioneer, all of Hadleigh.

TO BE SOLD, extensive FREEHOLD PREMISES, situate near Prescot, in the county of Lancaster, constructed and well adapted for the manufacture of earthenware, sanitary pipes, terra cotta chimney-tops, bricks, and other articles. Also the Plant (comprising steam-engine, steam-presses, locksitting gear), with utensils, &c. all complete. One half of the purchase-money of the freehold and buildings may remain upon mortgage, if desired. The property is well adapted for many purposes, having a plentiful supply of water, with a large reservoir therein.—For further information, address Mr. DANIEL REA, Jun. 140, Myrtle-street, Liverpool



TO BUILDERS and OTHERS.—TO BE LET on a long LEASE, TWO HOUSES, possessing a frontage of 73 feet to the great thoroughfare of Blackman street, Borough, by a depth of 217 feet. One house is a licensed Tavern, known as the "Unicorn," and the other possesses extensive premises in the rear. There are likewise Warehouses, Yards, Stabling, and other useful buildings adjoining, which readily command tenants and produce a good rental. Further particulars can be obtained of HENRY HYDE, Esq. Solicitor, 33, Ely place, Holborn; and of Messrs. PRICKETT & SON, Land Agents and Surveyors, 62, Chancery-lane, W.C. and Highgate, N. where a Plan of the property can be seen.

BARNET, Herts. For SALE, by Private Contract, eligible FREEHOLD BUILDING LAND, free from tithe and land tax, situate close to the Barnet Station, on the Great Northern Railway, and within half an hour's ride of the City by the Metropolitan Railway. The view from the estate are very extensive. Water is supplied from an Artesian well, and the neighbourhood is lighted with gas. The purchase-money may be paid by a deposit of 10 per cent and the remainder in nine years, by half-yearly instalments, with interest on the unpaid balance at 5 per cent. but the whole or any part of the balance may be paid off at any time without notice. For plans, particulars, and conditions, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

GRANGE-PARK, Leyton.—For SALE, by Private Contract, eligible FREEHOLD LAND, free from tithe and land tax, suitable for the erection of villa or good cottage residences, situate within 10 minutes' walk of the Low Leyton station, on the Loughton Railway, and within a mile and a half of the Stratford and Lea-bridge Stations, on the Great Eastern Railway. The subsoil is gravel, and water can be procured easily. The facilities for the carriage of bricks and other building materials afforded by the network of railways at Stratford, and the great and increasing demand for houses in the locality, render this property peculiarly adapted for building operations. The purchase-money may be paid by a deposit of 10 per cent. and the remainder in nine years by half-yearly instalments, with interest on the unpaid balance at 5 per cent but the whole or any part of the balance may be paid off at any time without notice.—For plans, particulars, and conditions, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand exposure to the weather. Light Oak, 4s. per gallon; Middle Tint, 5s. per gallon; Dark Oak, 6s per gallon; Mahogany, 8s.; Rosewood, 8s.; Walnut, 8s Varnishes for NAYLOR'S Stains may be had at the Factory, No 4a, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

A SUBSTITUTE for PAINT, and at HALF the COST—STEPHENS'S DYES or STAINS for WOOD.—Mr STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H. CHICHESTER, of Brittlebampton, near South Molton:—
"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."
H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

CROWDEN and GARROD (successors to THOS. KENT & CO.), the celebrated
PAINTING and GENERAL BRUSH MANUFACTURERS,
FALCON-SQUARE, LONDON, E.C.
*** Also Manufacturers of the Patent India-rubber Knife-boards, Cocoa-nut Fibre Door Mats, Matting, &c.
T. KENT and CROWDEN & GARROD, are stamped on the Brushes.

NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, wainscot, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, in rchants' and bankers' offices, railway stations, schools, &c. To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

TO REMOVE or CLEAN OLD PAINT, VARNISH, &c. use
NAENIARE & CO.'S PATENT LETHICIUM,
which does it in twenty minutes. Sold at 5s. per gallon. Also Brushes to apply and remove, 2s. per pair.—For particulars, apply at 11, St. Andrew's-hill, London, E.C. Success guaranteed.
N.B. Country orders must contain a cheque or Post office order.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

KENT'S PAINTING BRUSHES are all stamped G. B. KENT & CO.
And are manufactured solely by G. B. KENT & CO. at 12, Great Marlborough-street, London, W.

Special Contracts made for large works.—All communications to be addressed to the Company, at their Offices, 2, Winchester buildings, Great Winchester-street, E.C.
N.B. A Prize Medal was awarded to Captain Scott, for his Cement, at the International Exhibition; and this Company received an "HONOURABLE MENTION" for the good quality of their Lime.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE GAULT BRICKS, TILES, POTTERY, DRAIN PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

ROMAN, PORTLAND, PARIAN, and KEENE'S CEMENTS.
JAMES R. BLASHFIELD
(Late Wyatt, Parker, & Co.),
Plaster of Paris, Bricks, Lime, Hair, Laths, Sand, Tiles, Terra Cotta Chimney Pots, Trusses, Copings, &c.; Stoneware Drain-pipes, &c.
No. 1, SOUTH WHARF, PRAED-STREET, PADDINGTON.

PARIAN CEMENT for INSIDE WORK.
With this Material Houses may be finished and occupied in one-fourth the usual time, as Parian Stucco may be painted or papered within forty-eight hours. A finer quality produces a beautiful and hard scagliola imitation of marble.—Manufacturers, FRANCIS, BROTHERS, & POTT, Nine Elms, London.

ESTABLISHED, 1844.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whitening sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

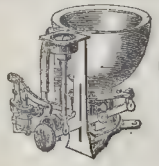
INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

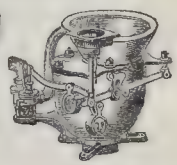
3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to



DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.



Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economized the manufacture of TERRA COTTA and FINE STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering &c. nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

MESSRS. FULLER, HORNE, & EVERSFIELD are instructed by the Directors to SELL by AUCTION, on the PREMISES, on TUESDAY, APRIL 21, at TWELVE, in lots, the Second Portion of the capital BUILDING MATERIALS and FITTINGS-UP of the extensive ranges of warehouses, wharfs, sheds, stabling, offices, and other premises known as Northumberland Wharf and Nos. 4 and 5, Holland-street (the whole built within a few years): comprising about 2,000,000 capital bricks (nearly equal to new), prime timber in roofs and floors, excellent slating, paving, flooring boards, useful sashes, loop hole and other doors, large plate glass sky-lights, crane and jib, cast-iron girder and stable fittings, lead gutters and pipes, a large quantity of granite pitching, a capital high pressure steam-engine, wrought-iron steam-boiler, iron shafting, and various other plant and machinery, gasfittings, and a large mass of useful materials and fittings-up. May be viewed the day previous. Catalogues had at Mr. VIGERS'S Offices, 3, Frederick's-place, Old Jewry; and of FULLER, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

CHEAPSIDE.—Building Materials of Five Houses.

MESSRS. FULLER, HORNE, & EVERSFIELD are directed to SELL by AUCTION, on the PREMISES, on WEDNESDAY, APRIL 22, at TWELVE, in lots, the valuable BUILDING MATERIALS, FIXTURES, and FITTINGS-UP, of five houses and shops, Nos. 141, 142, 143, 144, and 145, Cheapside, adjoining Saddlers' Hall, comprising granite and other kerb work, a large quantity of paving tiles, stout rafters, joists, girders, and other excellent timber, sound flooring-boards, a large assortment of glazed sashes, doors, partitioning, marble chimney pieces and interior fittings, iron columns, stone coping and cills, plate-glass shop fronts, several tons of lead in gutters and pipes, cisterns, stoves, ranges, and useful fixtures and fittings-up.—May be viewed the day previous. Catalogues had of ROBERT M SHAW, Esq. Architect, Crooked-lane Chambers, Cannon-street; and of FULLER, HORNE, & EVERSFIELD, 80, Fore-street, City, and 40, Parliament-street, Westminster.

DULWICH.—Materials of a Residence.

MESSRS. FULLER, HORNE, & EVERSFIELD will SELL by AUCTION, on the PREMISES, on Dulwich-common, on WEDNESDAY, APRIL 29th, at TWELVE, the excellent MATERIALS and FITTINGS-UP of a RESIDENCE; 120,000 stock bricks, 7,000 plain and pan tiles, 8 squares of slates, sound timber in roofs and floors, capital flooring-boards and battens, landscape and other sashes, doors, marble chimney-pieces, mahogany and other fittings, handsome marble chimney-pieces, stoves, ranges, copper, force-pump, several tons of lead, in gutters, ridges, pipes, and cisterns; stone steps and paving, bathcocks, coping, and rubber cloths.—May be viewed two days previous, and catalogues had at the Greyhound, Dulwich; at the Offices of CHARLES BARRY, Esq. Architect, 27, Sackville-street, Piccadilly; and of FULLER, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 80, Fore-street, City, E.C.

PUTNEY.—Freehold Estate, admirably adapted for Building Purposes.

FULLER & BELLAMY have received instructions to SELL by AUCTION, at the MART, opposite the Bank of England, on FRIDAY, APRIL 24th, at ONE precisely, in one or more lots (if not previously disposed of by private contract), a FREEHOLD BUILDING ESTATE, comprising several acres of park-like land (a portion of which is beautifully timbered), suitable for the erection of villa residences, being close to the Putney Station, within easy access, by rail, road, or water, of all parts of the metropolis, and 6½ miles from the Clapham Junction Station, of all parts of the kingdom. Persons desirous of treating for the whole, or a portion of the estate, will have the option of doing so up to the 24th instant. Particulars, with plans, may be had of the Station-masters at the Putney, Wimbledon, Vauxhall, Barnes, Mortlake, Richmond, Twickenham, Kingston, and Clapham Junction stations; of Mr. W. CROMBIE, Law Clerks' Office, Waterloo Bridge Station; at the Auction Mart; and of FULLER & BELLAMY, Estate Auctioneers and Surveyors, 10, Cornhill, E.C.

VALUABLE LEASE, GOODWILL OF THE BUSINESS, AND STOCK IN TRADE OF A BUILDER.

MR. BRAY, Jun., is instructed to SELL by AUCTION, on the PREMISES, No. 13, Kennington-green, Surrey, on WEDNESDAY, APRIL 22nd, at TWELVE o'clock, the valuable LEASE of the above PREMISES, in which the late tenant, a builder has been carried on successfully for upwards of fifty years. The premises are in every respect adapted for doing a good trade, and are held for a term of about eighteen years, at 61l. per annum. Also the Stock-in-Trade, comprising yellow battens, deals, scaffolding poles, oak planks, posts, and cills, wainscot and hardwood, prepared floor-boards, mouldings, sashes, frames, bricks, tiles, slates, cement, carpenters' benches, scaffold poles, iron range, &c. Particulars and catalogues may be had on the Premises; of Messrs. PALMER, SNEWING, & PALMER, Solicitors, 4, Parliament-street, Charing-cross; of Messrs. HOVENDEN & HEATH 4, Broad-street-buildings, E.C.; and at the Offices of the Auctioneer, 16A, King's-road, Bedford-row, W.C.

MIDDLESEX.—Valuable and important Freehold Building Land, and a Brickfield and Pottery.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on WEDNESDAY, MAY 13th, at TWELVE, about twelve acres of exceedingly valuable FREEHOLD MEADOW LAND, (with high, suitable for building purposes, and presenting to land societies and others an unusual opportunity for a profitable speculation. The land contains an abundance of fine gravel.—May be viewed, and particulars had at the Abercorn Arms Hotel, Great Stanmore; of Messrs. CARDALE, ILIFFE, & RUSSELL, Solicitors, No. 2, Bedford-row; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

RED HILL, SURREY.—Valuable Freehold Building Land, and a Brickfield and Pottery.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on WEDNESDAY, MAY 13th, at TWELVE, about twelve Lots of very valuable FREEHOLD BUILDING LAND, situate adjoining the estate of P. Hanbury, Esq. within an hour's journey of the metropolis, and only half a mile from Red-hill Junction Station of the South-Eastern and Brighton Railways, in the county of Surrey. It has an extensive frontage to the high London and Brighton road, stands high, commands fine views over the beautiful Tanbridge park of Gatton, and offers first-rate sites for the erection of several superior residences, or for a moderate-sized mansion; it presents also a rare opportunity for a profitable building scheme; let to a respectable tenant. Also a valuable Freehold Brickfield and Pottery, situate in the rear of the above land, having an extensive frontage to the road leading from Lackford Lane to Merstham, containing a number of acres, and adapted for building purposes. It comprises about seven acres, and is let to Mr. W. Thornton, for a term which will expire in 1869, at a rent of 22l. per annum. May be viewed; particulars, with plans, had at Laker's Hotel, Red-hill; White Hart, Reigate; Greyhound, Croydon; of Messrs. CROWDER, MAYNARD, SON, & LAWFORD, Solicitors, 27, Coleman-street, E.C.; of Messrs. WILSON, Esq. Architect, 59, Laurence Pountney-lane; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

LEYTON, ESSEX.—Valuable Freehold Building Land.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Devisees under the Will of the late John Masterman, Esq. to offer for SALE, at the MART, on WEDNESDAY, the 13th of MAY, at TWELVE, in four lots, about 21 acres of exceedingly valuable FREEHOLD BUILDING LAND, situate on the high road from Leyton to Woodford. With shelter, within an easy distance of the church and railway stations at Leyton and Leabridge, in the county of Essex, and about six miles from London, viz.—Lot 1, valuable Park Field Building Land, with two cottages and gardens, farm-yard, cow-house, stable, and shed, having a very important frontage of about 960 feet to the high road, 500 feet to other good roads, and containing 6a. 1r. 35p. Lots 2, 3, and 4. Three Plots of Building Land, adjoining lot 1, having extensive frontages to Capworth street, leading from London to Wycliffe, and containing together 16a. 3r. 20p. The whole of the land is well adapted for the erection of detached and semi-detached villas. May be viewed, and particulars had of Messrs. HUGHES, MASTERMAN, & HUGHES, Solicitors, No. 17, Bucklersbury; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton Works), in the following Marbles, viz.:—Statuary, Rouge Royal, Black and Gold, Black, Sienna, Bardilla, Dove, California, St. Ann's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa Green, Irish Green, Blue Belgic, Emperors' Red, Irish Fossil, Campanc Melange, Vein, Sicilian, and various excellent specimens of British Marbles, varying in price from 1l. 10s. to 50l.; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchases to the extent of 30l. and 50l. approved bills of three and four months will be taken, less 2½ per cent. cash. Purchasers from the country will be supplied in the following cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

UPPER HOLLOWAY.—Valuable Freehold Building Land, close to Highgate

MESSRS. PRICKETT & SON have received instructions to SELL by AUCTION, at the MART, City, on WEDNESDAY, JUNE 10, at TWELVE o'clock, in one lot, (unless previously disposed of by private contract), a valuable and important FREEHOLD ESTATE, comprising 10a. 3r. 34p. of building land, delightfully situate in York-road or Maiden-lane, extending nearly to Highgate-hill on the east, in the parish of Islington, with a frontage of upwards of 360 feet, and two new roads formed and made up to it, so that the property can immediately be rendered available for building purposes, the greater part of the adjoining land being already built upon, and a great demand for houses existing in this locality. This estate is believed to contain brick earth to a considerable depth, and is recommended to the favourable notice of parochial boards and others seeking a convenient site for the erection of a public institution, as the ground lies high, is close to Highgate, and within a few minutes' walk of the Archway Tavern, from whence numerous conveyances may be had to all parts of the metropolis; also near to a contemplated station on the Tottenham and Hampstead Junction Railway.—Further particulars can be obtained of P. A. HANLOTT, Esq. Solicitor, Bedford-row; and of Messrs. PRICKETT & SONS, Land Agents and Surveyors, 62, Chancery lane, W.C. and Highgate, N.

THE PATENT CONCRETE STONE COMPANY (Limited). Incorporated under the "Companies' Act, 1862," as a Company in which the liability of each shareholder is strictly limited to the amount of his shares. Capital, 150,000l. in 10,000 shares of 10l. each. First issue, 2,000 shares of 10l. each, the holders of an 8 first shares to have the preference pro rata on all further issues. Deposit on application, 1l. per share, and 1l. 10s. on allotment. Further calls not to exceed 2l. 10s. at intervals of not less than two months. The amount deposited will be returned without deduction in the event of the shares not being allotted.

Provisional Directors.

Fredk. Alexander, esq. Banker, Ipswich
James Beadel, esq. 25, Gresham-street, London.
George H. Burnell, esq. C.E. and Architect and Civil Engineer, 14, Lancaster's-inn-fields, London
Charles Cubitt, esq. C.E. 3, Great George-street, Westminster.
J. Allen Ransome, esq. Orwell Ironworks, Ipswich.
George Smith, esq. Builder and Contractor, 44, Wimpole-street London
Edward Woods, esq. C.E. 3, Storey's-gate, Westminster.

BANKERS.—Messrs. Barnett, Hoares, & Co. London; Messrs. Ransome, Sims, & Jefferies, Ipswich.

SOLICITORS.—Messrs. Dimmock, Nash, & Field, 2, Suffolk lane, Cannon-street, London.

GENERAL MANAGER.—Fred. J. Ransome, esq.

BANKERS.—Messrs Barry & Co. Birchin-lane.

SECRETARY (pro tem.)—Thomas Piper, esq.

TEMPORARY OFFICES.—20, Parliament-street, Westminster.

ABRIDGED PROSPECTUS.

The Patent Concrete Stone is made by consolidating particles either of sand, gravel, or clay, or any like material by means of a chemical process both simple and inexpensive.

Blocks of stone of any size, hard and durable as the best natural sandstones, but more uniform in texture, however ornate, are produced in a few minutes at a price with which natural stone can nowhere compete. No fire is used in the manufacture, and consequently the article does not crack or decay.

It is adapted to every purpose, both constructive and decorative, to which stone is applied. The stone has been already largely employed for the elegant and massive architecture of the new Courts of Law in London, Chatham, and Dover Railway, and elsewhere. Recent inspection proves that, after long exposure to the atmosphere, and a number of years' immersion, and for that block the prize medal was awarded.

The Company has made a very advantageous purchase of the patent rights and machinery for the manufacture of artificial stone, and also of the factories and plant of the inventor, situate at Ipswich and Norwich, so that no time will be lost in commencing remunerative operations. Many applications for licenses have been received, and are now under consideration.

Copies of the Articles of Association can be seen, and prospectuses obtained, at the Temporary Office of the Company, or from the Brokers, to whom applications for shares are to be sent.

LEIGHTON, SON, & HODGE beg to intimate to Publishers, Printers, and the Public generally, that they execute all the best style and on the most moderate terms every description of PLAIN and ORNAMENTAL BOOKBINDING, either in Cloth or Leather.—Also Account Books, Ruling, with promptitude and punctuality.—Price Lists on application.

A Quantity of ENGRAVED BRASS DIES in most extensive and varied, and designed in the best taste; and their powerful machinery and steam power give them great advantages in the rapid execution of large orders.

Applications for estimates will meet with prompt attention.

LONDON: 13, SHOE-LANE, E.C.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION

Incorporated by Act of Parliament, 1859, 14, RUSSELL STREET, Covent Garden, W.C. Advances from 50l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the purchase money advanced on easy terms. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Inspectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

E. LLOYD GRIFFITHS, }
Cheltenham, April, 1863.

CONTRACTS.

LONDON DISTRICT.—To BUILDERS and OTHERS.—WAR DEPARTMENT TRIENNIAL CONTRACTS for WORKS and REPAIRS.—The Commanding Royal Engineer, London District, hereby gives Notice that Sealed TENDERS will be received at the War Office, Pall-mall, London, S.W. addressed to the Director of Contracts, on or before 21st MAY, 1863, for WORKS and REPAIRS at the undermentioned Stations, from 1st JULY, 1863, to 31st MARCH, 1866, inclusive, viz
London, comprehending Tower of London, and all the barracks or other buildings within 5 miles of that place.
Schedules and printed forms of Tender, price 7s. 6d. each, and all necessary information, may be obtained on application at the Royal Engineer Office, 11, James-street, Buckingham Gate, London, S.W. from THURSDAY, the 23rd day of APRIL, until THURSDAY, the 14th day of MAY, 1863, inclusive, between the hours of ELEVEN a.m. and THREE p.m.
The Secretary of State reserves to himself the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, 11, James street, Buckingham-gate, London, S.W. 17th April, 1863.

KINGSTON-UPON-HULL LOCAL BOARD of HEALTH.—To CONTRACTORS.—The Local Board of Health of Kingston-upon-Hull are prepared to receive TENDERS for the OUTFALL DRAINAGE of the WEST DISTRICT of the Borough of Hull, comprising the construction of upwards of four miles of brick sewers and other works in connexion therewith. Trial shafts have been sunk on the proposed lines of sewers, the results of which may be seen, with the plans of the intended works, on application to Mr. J. FOX HART, C.E. Surveyor to the Local Board, at his Office, Scuicoates-hall, Hull, where also copies of the specification, forms of tender, and bills of quantities may be obtained on payment of two guineas (to be returned to parties tendering in accordance with the specification), on and after THURSDAY, the 16th inst. Sealed Tenders, endorsed "West District Drainage," addressed to the Chairman of the Committee of Works, Sculcoates-hall, Hull, must be forwarded on or before THURSDAY, 30th APRIL, 1863. The Board do not bind themselves to accept the lowest or any Tender.—By order,
Hull, April 2nd, 1863. C. S. TODD, Clerk to the Board.
Notice is hereby further given, that the time for receiving Tenders for the above-mentioned work is EXTENDED UNTIL WEDNESDAY, the 6th day of MAY, 1863.—By order,
Hull, 20th April, 1863. C. S. TODD, Clerk to the Board.

TO BUILDERS.—TENDERS are required by Messrs. COURAGE & CO. for the ERECTION of TEN HOUSES near Jamaica Tavern, Bermondsey.—Apply to Messrs. SNOOKE & STOCK, Architects, 6, Duke-street, London Bridge, S.E. where plans and specifications may be seen. The Promoters do not bind themselves to accept the lowest or any Tender.
April 16th, 1863.

LEEDS CORPORATION WATER-WORKS.—TENDERS WANTED for the ERECTION of an ENGINE HOUSE, BOILER-HOUSE, COAL-HINS, WORKMEN'S COTTAGES, and other Works, at Arthington, near Leeds. The plans and specification may be seen after MONDAY, the 13th instant, by applying to Mr. EDWARD FILLITER, C.E. Borough Surveyor, Engineer to the Waterworks, at his Office, Town Hall, Leeds. Sealed Tenders, addressed to the Waterworks Committee, Town Clerk's Office, Leeds, to be sent in not later than THURSDAY, the 30th instant.—By order,
JOHN EDW. SMITH, Town Clerk.
Leeds, 4th April, 1863.

TO BUILDERS.—The Building Committee of the Baptist Church, Worcester, are prepared to receive TENDERS from CARPENTERS (in one sum) for the VARIOUS WORKS required in the ERECTION of a NEW CHAPEL at Worcester. The drawings, specifications, and bills of quantities may be seen at the Iron Room, Foregate-street, in Worcester, between the hours of TEN to SIX, from WEDNESDAY, APRIL 22nd, until SATURDAY, MAY 2nd (both inclusive). Copies of the bills of quantities may be had on personal application to the person in charge of the drawings, or by letter addressed to him. Tenders, endorsed "Tender for Chapel," must be addressed to Rev. H. E. STURMER, Chesnut-walk, and will not be received later than MAY 2nd
Darlington, April 14, 1863. PRITCHETT & SON, Architects.

STOCKTON and DARLINGTON RAILWAY.—To BUILDERS.—The Stockton and Darlington Railway Company are prepared to receive TENDERS for the following WORKS, viz.:—
No. 1. For the ERECTION of FOUR COTTAGES, at Middlesbro'.
No. 2. For certain ALTERATIONS and ADDITIONS to the PASSENGER STATION, at Middleton-one-Row.
No. 3. For the ERECTION of a WATER TOWER, at Saltburn-by-the-Sea.
No. 4. For a large CAST-IRON TANK and GIRDERS, for the Water Tower at Saltburn-by-the-Sea.
Plans and specifications for the above may be seen upon application to the Architect at the Railway Offices, Darlington, at the following dates, viz.:—Plans, &c. for No. 1, from WEDNESDAY, APRIL 15th, to WEDNESDAY, the 22nd. Plans, &c. for No. 2, from MONDAY, APRIL 20th, to WEDNESDAY, the 29th APRIL. Plans, &c. for No. 3, from WEDNESDAY, APRIL 22nd, to WEDNESDAY, MAY 6th. Plans, &c. for No. 4, from MONDAY, APRIL 27th, to WEDNESDAY, MAY 6th.
Tenders to be delivered on or before the last named date in each case, addressed to the Secretary, and endorsed "Tender for Works." No pledge is given that the lowest or any Tender will be accepted.
(Signed) THOS MAC NAY, Secretary.
Railway Office, Darlington, April 10th, 1863.

HORNSEY HIGHWAY BOARD CONTRACTS.—TENDERS will be received by this Board on or before SATURDAY, MAY 2nd, from parties willing to contract for the SUPPLY of MATERIALS for the repair of the roads and footpaths, and Team work; also for Mason's and Paviour's work for the year ending 25th MARCH, 1864. Forms of Tender and particulars may be had on application to Mr. H. S. INWOOD, at this Office, on the mornings of TUESDAY, WEDNESDAY, and THURSDAY, the 28th, 29th, and 30th inst. between the hours of NINE and ELEVEN o'clock. WILLIAM POTTER, Clerk to the Board.
Offices of the Board, High-street, Highgate, 23rd April, 1863.

CONTRACTS.

TO MASONS and PAVIORS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on NOON precisely, to receive TENDERS for RE-PAVING the CARRIAGE-WAYS of LUDGATE HILL and STREET, and the FOOTWAYS of LOWER THAMES STREET, agreeably to specifications to be seen at this Office. Persons Tendering are required to give the names and addresses of at least two substantial householders as their sureties to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory; and no Tender will be received after TWELVE o'clock on the day of treaty JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, 14th April, 1863.

TO BUILDERS, &c.—HAILEYBURY COLLEGE, Herts.—Persons willing to TENDER for the EXECUTION of the several WORKS required in FORMING a LARGE SWIMMING BATH, 210 feet long, are informed that the contract, drawings, and specification will lie for their inspection at Haileybury College, near Hertford, on and after WEDNESDAY, the 22nd inst. until WEDNESDAY, the 29th APRIL inst. from TEN to FIVE each day, on which day Tenders will be received, endorsed "Tender for Bath," addressed to Rev. L. BREEDES, the Hon. Secretary, Bramfield Rectory, Hertford. The Committee do not undertake to accept the lowest or any other Tender. Forms of Tender, copies of drawings, and specification, with quantities, may be obtained of JOSIAH FORSTER FAIRBANK, C.E. 20, Parliament-street, London, S.W.
London, 16th April, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the erection of a new RECTORY HOUSE and PREMISES, at High Laver, in the county of Essex, are requested to send their Names to Mr. FREDERICK CHANCELLOR, Architect, Pinners' Hall, Old Broad-street, London, and Chelmsford, Essex, before TUESDAY, the 28th of APRIL.

BOARD of WORKS for the HACKNEY DISTRICT.—CONTRACTS for WATERING ROADS and for HYDRANTS.—Notice is hereby given that the Board of Works for the Hackney District will meet at the Town Hall, Clerkenwell, Hackney, on THURSDAY, the 30th day of APRIL next, at TEN o'clock in the forenoon, for the purpose of opening TENDERS as follows:—WATERING ROADS:—for the Supply of Thirty (or more if required) Water Carts, with good and sufficient horses, proper harness, and men to attend each cart, until the 29th day of SEPTEMBER next, for the purpose of watering certain roads in the parish of Hackney, under the superintendence and to the satisfaction of the Board and their Surveyor, under Contracts 1, 2, and 3. HYDRANTS:—for the Supply and fixing complete of Twenty (or more if required) Water Posts, or Fault Hydrants, connected with the services and meters, with covering boxes and receivers for meters, ready for use. Drawings or samples of the Hydrants, or Posts, to be furnished by the parties Tendering. Forms of Tender and further particulars may be obtained at the Office of Mr JAMES LOVEGROVE, C.E. between the hours of NINE and TEN a.m. The Tenders to be sealed, endorsed "Tender for Watering Roads" or for "Hydrants" (as the case may be), and addressed to the Clerk, and delivered at the Town Hall, Hackney, on or before WEDNESDAY, the 29th day of APRIL. The parties tendering, or their representatives, must attend the Board on THURSDAY, the 30th day of APRIL next, at TEN o'clock precisely. Persons Tendering will be required to enter into a Contract or Bond, at their own expense, in sufficient surety for the due performance of the Contract, and the Board do not hind themselves to accept the lowest or any Tender.
Dated April 22nd, 1863. RICHARD ELLIS, Clerk.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS, &c.—Persons desirous of CONTRACTING for the RE-BUILDING of the PREMISES in the High-street, St Neots, Huntingdonshire, for Mr E. Bedells, are requested to send in their names, with references to one or more buildings erected by them, to the Architects on or before THURSDAY, the 2nd instant. Tenders for each separate trade, or for less than the whole of the proposed works, will not be received. The drawings and specification will be for inspection on the Premises, and at the Offices of the Architects. The quantities will be supplied upon payment of 10s (to be returned if a bona fide Tender is sent), and also all needful information furnished to such Builders as may be approved by Messrs. LANDER & BEDELLS, Architects, 4, Great James-street, Bedford-row, London, W.C.

BRIGHTLINGSEA GAS and COKE COMPANY (LIMITED).—Contractors are invited to TENDER for the ERECTION of NEW GAS WORKS for the above named Company.—Plans and specifications have been prepared by Mr. JAREZ CHURCH, of Chelmsford, Civil Engineer, and copies of the same can be seen either at his Office, or on application to the Secretary, at the Office of the Company. The work is divided into two contracts:

No. 1 Contract comprises the Builder's Works, and
No. 2 the Apparatus, Iron Work, and Street Mains.

Tenders for each contract are to be sealed, endorsed, and delivered to the Secretary, on or before the 7th day of MAY, 1863. The Directors do not bind themselves to accept the lowest or any Tender.

ELLIS C. ATKINS, Secretary.
Gas Company's Office, High-street, Brightlingsea, Essex.

TO MASONS and PAVIORS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLYING and LAYING an area of about 4,000 feet run of 12-inch by 8-inch DRESSED ABERDEEN FLAT KERBS, and of about 1,150 feet superficial of 4-inch TOOLED YORK PAVING, in the parish of Battersea. The specifications can be seen at the Offices of the Board, as below, between the hours of NINE and FIVE. Tenders are to be sent in, addressed to the Board, and endorsed "Tender for Paving, Battersea," on or before the 29th MAY next. Security will be required for the due execution of the Contract. The Board do not pledge themselves to accept any Tender. By order of the Board of Works for the Wandsworth District.

ARTHUR ALEXANDER CORSELLIS, Clerk to the Board.
Battersea-rise, Wandsworth, S.W. 20th April, 1863.

BY HER MAJESTY'S ROYAL LETTERS PATENT

WEBSTER'S SLATE DRILL BORING MACHINE.

The Patentee, in introducing this Machine to the notice of Contractors, Slate Merchants, Slaters and House Proprietors, has every confidence in recommending it as being an immense improvement upon the old fashioned, slow and expensive mode of Boring or Punching House Slates. Though admirably adapted for its purpose, this Machine is yet so simple that a boy may work it, it is so cheap that no tradesman need be without one, and so economical that, by its saving in breakage alone, its cost will be repaid in a few weeks.

The advantages and capabilities of the Machine may be stated as follows:—

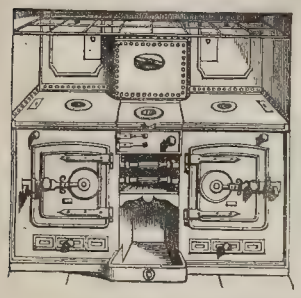
1st. It will bore with ease the hardest slate.

2nd. The holes are drilled at once with sufficient countersink for the heads of the nails.

3rd. It economizes time, reduces labour, and saves expense, as one man by the Machine can accomplish the work of four by the knife or pick.

4th. There is no breakage.

5th. The full strength of the slate is preserved; the drill not causing any splinter as is done by the pick.



DISTRICT AGENTS are being appointed for England and Wales, and also Ireland. Suitable parties will learn prices and terms by applying to the Patentee, ALEXANDER WEBSTER, Engineer, Arbroath, N.B.; or to his Agent, Mr. D. F. ORMOND, Ironmonger, Arbroath. Satisfactory references will be required.

*** Numerous Testimonials have been received, and can be had on application.

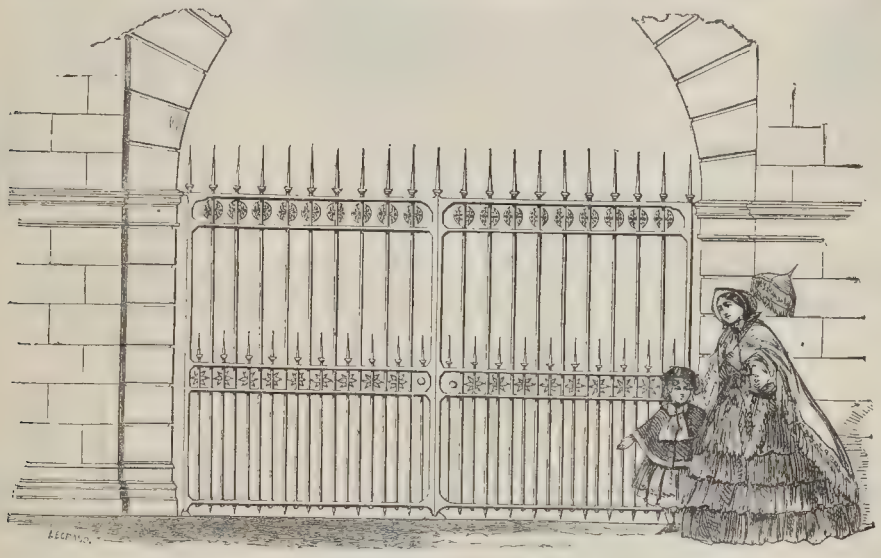
A BARGAIN.—Powerful HYDRAULIC PRESS (very little used) TO BE SOLD for 20*l*.; cost 2 0*l*. Also, Two Machines for Drawing Brass Tubes and small Rolling Machine, cheap.—Apply, on the Premises, to Mr. ELLINGTON, 244, Carlington-street, Hampstead-road, N.W.

CRANE.—WANTED, a portable 5-TON CRANE, for use upon rails.—Full particulars to be addressed to Mr. W. PEAL, Attleborough Quarries, Nuneaton.

WANTED TO PURCHASE a Second-hand IRON CIRCULAR-SAW BENCH, to take a 30-inch saw.—Send all particulars to S. W. ARIES, Builder, Putney, S.W.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit



WILLIAM S. BURTON'S SHOW-ROOMS.

KITCHEN RANGES! !—Architects, Builders, and others, will save time, labour, and money, by consulting "The Catalogue of Modern Inventions." Post free. London: BROWN, BROTHERS, 43, Cranbourn-street, W.C. References to see in operation in London and all parts of the United Kingdom.

DEVAUX'S VIEILLE MONTAGNE THICK ROOFING ZINC.

This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. EDMISTON, Esq. F.I.B.A. will last as long as lead, at one-third the cost.

For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to

Mr. J. W. TYLER, OFFICE—12, ABINGDON-ST.; WORKS, 4, WOOD-ST. WESTMINSTER, S.W.

If the Metal is laid by Mr. TYLER, who has become so well known among Architects and Builders, superior and careful workmanship may be depended upon, and a guarantee given for its durability, if the woodwork is prepared according to directions given.

THE PRIZE MEDALS

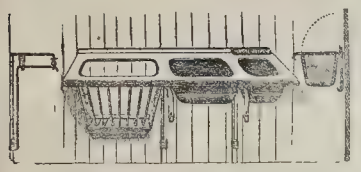
(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in



STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.

In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought-iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Halter Guide and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar.

COTTAM'S NEW PATENT SEED-BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant, while its cheapness, simplicity, and utility in keeping the contents of the trough clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE CUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

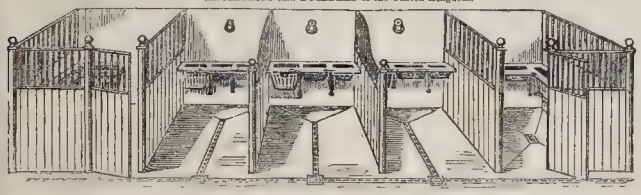
PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

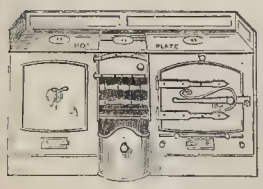


N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31.—PRIZE MEDAL AWARDED FOR

BARTON'S PATENT STABLE FITTINGS

AND ENAMELLED MANGERS.



These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to his newly-erected PRACTICAL STABLE, now on view at the Manufactory, 370, Oxford-street, where an extensive Assortment of all kinds of Stable Furniture, upon the most modern and improved principles, is to be seen.

A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,

38 and 65, York-street, Westminster.

PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

THE NEW CRYSTAL STAR AND SUN LIGHT.

NOTICE TO ARCHITECTS, BUILDERS, AND THE TRADE.

J. DEFRIES & SONS,

MANUFACTURERS OF MEDIÆVAL AND OTHER GAS-FITTINGS, CRYSTAL, BRASS, AND ORMOLU CHANDELIERS.

SHOW-ROOMS—147, HOUNDSDITCH, CITY. WORKS—LONDON AND BIRMINGHAM.

Estimates and Designs for Lighting Theatres, Concert Rooms, and Public Buildings, forwarded free.

HART & SON

Ornamental Metal Workers in Iron, Silver, and Brass.

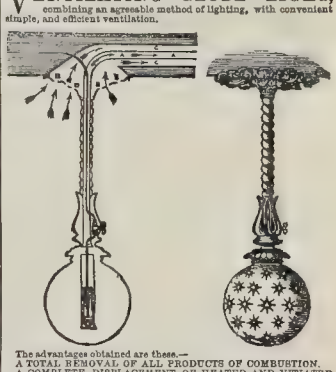
Chalices, patens, crosses, flower vases, lecterns, candlesticks, coronæ, standards, and brackets for lighting; gates, hinges, memorial brasses, &c., &c.

Catalogues on application.

53 to 58, Wych Street, Strand, London, W.C.; Show Rooms also, 20, Cockspur Street, S.W.

JOHNSTON, BROTHERS,

MEDIÆVAL METAL WORKERS AND GASFITTERS,



Manufactory, 190, High Holborn, London.

Drawings and Estimates furnished.

RICKET'S & HAMMOND'S

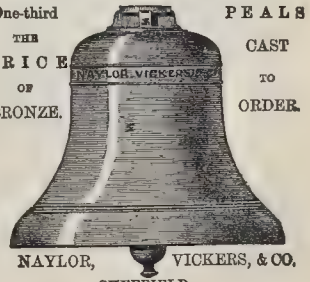
VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these.—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.



AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

5, AGAR STREET, STRAND, LONDON, W.C.

CAST STEEL BELLS,

One-third THE PRICE OF BRONZE.

PEALS CAST TO ORDER.

NAYLOR, VICKERS, & CO.

SHEFFIELD.

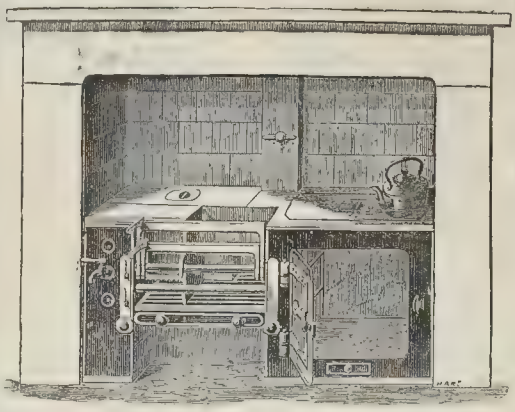
For Designs and Estimates apply to



RANDAL STAP, Contractor,

No. 32, KING WILLIAM STREET, E.C.

Where numerous Drawings and Photographs may be seen.

N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.

The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

The sliding Hob, which is fastened to the Winding Cheek, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,

WILLIAM ADDIS,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,

Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.

A PROSPECTUS AND REFERENCES WILL BE FORWARDED ON APPLICATION BY LETTER.

GALVANIZED WROUGHT IRON CISTERNS AND TANKS,

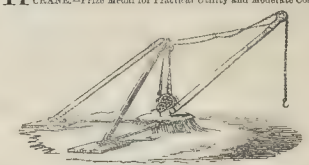
The bath and boiler may be fixed in the same or separate rooms, and are below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of Builders.

Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

DAY and GAS-LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. These Reflectors never tarnish, require no cleaning, and are the most effective and durable yet presented to the public. All kinds of Bent Glass Silvered.

N.B.—The usual discount to builders and the trade



WROUGHT-IRON TANKS, CISTERNS, GIRDERS, FUNNELS, &c. plain or galvanized; CATTLE TROUGHS, IRON CART-BODIES, &c.

BURNEY & BELLAMY, Mill-wall, London.

Steam-boats from London Bridge call near the Factory.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medal for Practical Utility and Moderate Cost

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the Building of the Exhibition, London, can always be had from the Makers, from 1c. cwt. upwards. Portable, Fan-dry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can be supplied with our Improved sluice Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springside Iron Works, M'Neil street, Glasgow.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ironmakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

TERRA-COTTA WORKS,

BLACKFRIARS ROAD,

LONDON, S.

MARK H. BLANCHARD&CO.

Successors to Coades.

Original Works established 1769. Terra-Cotta Manufacturers to her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Department of Science and Art, South Kensington, and the Recipient of the Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

A beautiful variety of Statues, Statuettes, Vases, Tazzæ, Fountains, Flower Pots, Balustrade Terminals, and other adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862,

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have exclusively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works were the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the GAMES of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

STAINED GLASS and WALL PAINTING.

MESSRS. CLAYTON & BELL,

SURVEYING, LEVELLING, and CIVIL ENGINEERING.—Engineering Plans, Specifications, and Estimates prepared; Quantities Taken Out, Surveys Made, Levels taken, &c. with accuracy and despatch.
Practical Field Instruction given on moderate terms
HYDE, SMITH, & LEWIS, Civil Engineers, Surveyors, &c. &c.
Offices, 24, Guildford-street, Russell-square.

ARCHITECTURAL and ENGINEERING DRAWING CLASSES, for Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, &c. &c. Established by Messrs. HYDE, SMITH, & LEWIS, Architects, Civil Engineers, &c. for giving DAY and EVENING INSTRUCTION in Architectural, Engineering, and Mechanical Drawing, Perspective, Isometrical and Geometrical Drawing; Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating Builders' Work, &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, Five Evenings per Week, from 7 to 10. There are no extras. The Terms include the whole of the above, with the use of Drawings, Boards, Squares, &c.—For Prospectuses of the Drawing Classes, apply at the Establishment, 24, Guilford-st. Russell-sq.

IF any BROTHER of the CRAFT can offer SUGGESTIONS for the LIGHTING, VENTILATING, and DECORATING a NEW LODGE-ROOM, 1256, 48 by 18 by 18, will he kindly communicate with Mr. V. BIRD, Market, Devonport?

TO BUILDERS, ARCHITECTS, AND SURVEYORS.
BRICKWORK WANTED.—A Foreman BRICKLAYER, having his own scaffolding, is just closing his job, and is open for another ENGAGEMENT, by the rod or otherwise. References if required.—Address, B. 1a, Story-street, Caledonian-road, King's Cross.

TO BE SOLD, GOTHIC WINDOWS, &c. from Kew Palace, for a moderate-sized gentleman's house, now lying at Twickenham.—For particulars address, Mr. CLIFTON, 5, Prospect-place, Upper Norwood.

IMPORTANT to BUILDERS and OTHERS having circular saw tables.—The Advertiser, WILLIAM SKETCHLEY, having invented and perfected an IRON DISC for PLANING FLOOR-BOARDS to any width and thickness required, calls the attention of builders and others to the importance of and immense saving effected by it. The Disc is attached to the spindle with as little trouble as the circular saw, and will prepare the surfaces of ten squares per hour.—To give orders, or for information apply to the Inventor, WILLIAM SKETCHLEY, 7, Turton street, Weymouth.

The Builder.

VOL. XXI.—No. 1055.

Materials and Manufactures in the Architectural Exhibition.

IT is, we have often said, peculiarly difficult in the case of new materials and contrivances that are put forward for use in buildings, to form accurate opinions of their merits; and the extent of the difficulty is not appreciated by the public, with whom the sense of responsibility can hardly exist, as it must with architects. Our profession, we have remarked, has been frequently blamed for an indisposition to adopt new inventions. The fact is that apprehension of all the conditions of success, or foresight of many of the influences that will affect results in the period of time which it is the office of good building to provide for, is scarcely possible. Inventions the most promising sometimes turn out failures, through the circumstance that a single point was necessarily in oblivion at the time of adoption of the contrivance, or material; and the most experienced architects are not unlikely to be those who will have learned the most to be cautious, and who in the interests of their clients will be the most determined in asking for proofs of the durability and real economy of the articles invented and offered. The duty referred to as that of architects, is greatly increased, rather than diminished, by the quantity of materials and contrivances that have come into the market, and by the general tendency to substitute manufactured articles, merely purchased and to be fixed, for materials wrought or shaped on, or in, the building itself. To carry reasonable caution however to the length of prejudice,—so as to refuse to be served by the prolific enterprise, even that of *dealers*, in materials,—would be obviously not the course for the professors of an art and science essentially progressive, like architecture.

When ready-made ornaments, substituted for such as should have been designed and wrought for the position, are used to the blotting-out of all art-manifestation, as in the large majority of stuccoed edifices, dissatisfaction with the condition to which the art of the beautiful in building is there reduced, may be excusable, as may also some apprehension lest results such as have been brought about needlessly in the application of cement and plaster, should attend the use of artificial stone and baked clay. To pursue the serious question of the influence of art-manufactures upon our art of architecture, would however involve us in too great length of appreciation of the several points in the question, appropriately for our space,—even devoted as that is to an exhibition which includes articles of the class of manufactures concerned; whilst the difficulty of the question is enough to demand very patient and long-matured reflection. For the art-element in the manufactures department of the Exhibition in Conduit-street, then, we shall confine ourselves as heretofore, to what is presented to visitors; and in this as usual, if there be little in quantity, there is work to interest us and moreover to be admired.

As to materials and contrivances, however, in the view of their durability and economy, and of the means of comparison between materials, we must repeat that places of exhibition as now organized, do not enable the architect to get the information that he ought to be in a position to derive. The materials department of the Architectural Exhibition may always be visited with advantage; and it must be of great service to the manufacturers and dealers who contribute to it specimens of their productions; but we trust that some day, we shall see our long-since-suggested arrangement carried into effect, namely, that of exhibition in the open air and subjection to one of the true tests, exposure to the weather, in the case of all building materials and things designed for external use. All articles of this description in the Jermyn-street Museum, the museums at South Kensington and Kew, the Crystal Palace, the Polytechnic Institution, and wherever else, are simply misplaced, or so long at least as they do not become merely duplicates of specimens out of doors. If ground in Hyde Park, or Battersea Park,—or Victoria Park, if not too distant from central London,—could be devoted to the use suggested, the result might be a really popular and interesting as well as useful and instructive museum; whilst the test would be that of the very atmosphere in which the materials would have to be used. We would accept ground anywhere, however, out of London, rather than not possess the collection, and have the advantage that has been so long a desideratum in practical architecture. Might not the directors of the Crystal Palace, having the ground, usefully give attention to the subject? At least the object of our suggestion deserves to be pursued by the Institute of British Architects, the Institution of Civil Engineers, the Society of Arts, and the Department of Art and Science, and by all who are interested in questions of the durability of building materials,—as are the whole public.

After this perhaps long preamble,—in the course of which, however, it should have sufficiently appeared why we cannot necessarily respond to wishes of some exhibitors, even in the case of promising inventions, by praising these last,—we may without prejudice to the value or limits of mere notes, fittingly proceed to mention those specimens and objects that we have observed in the Conduit-street collection this year. The whole division of the collection is not large; but the variety of the kinds of articles is considerable. Thus there is no opportunity for comparing numerous inventions of the same class. Some of the objects have been in the galleries for several years, or were conspicuous in the International Exhibition of last year. The committee have issued the usual announcement of an exhibition next year, as well as that of the autumn exhibition of the Architectural Union Company: it might be well if they would consider whether by any classification, or restriction, consistently with the pecuniary receipts for space, they could render the department of materials and inventions more instructive and useful than it is this year to architects. Exhibitors, however, omit to afford necessary information as to any tests of strength, and as to price and other matters that would obviously be inquired about.

Clay manufactures and substitutes for stone, as on former occasions, are prominent in the collection. Messrs. F. & G. Rosher exhibit a selection from the articles in great variety, in which they deal, and which include bricks; paving, coping, and roofing tiles; ridge-cresting, and garden-edging. The Chilton white and red Suffolk facing bricks, and moulded bricks, are good. Messrs. Rosher issue a very useful sheet of diagrams of the different forms of pans, traps, and basins. The works they exhibit in artificial stone "prepared with Bennett's Patent Indurating Solution," are inferior to what can be produced: the ornament on the trusses sadly wants clearing out. The Watsonian Patent Fern Brick and Fern Column, also exhibited by Messrs. Rosher, deserve, as tasteful and ingenious contrivances, the attention of all cultivators of ferns. The "brick" which is made in three sizes,—the largest, 14 inches by 13 inches, and the smallest 3¼ inches by 3¼ inches,—is hollowed out on one face into a sort of niche; and from the bottom of this projects a shell-formed dish, the receptacle for the plant. Several of these bricks,—18 for a hexagon of three tiers in height,—may be built together to form the "column," which may be set in a shallow vessel or tray, and covered with a glass shade. They are made in the porous red clay. The different sizes are for the different kinds of mosses, *lycopodia*, and other plants. Instead of being arranged as a "column," they may be grouped, and built into a wall. Vegetation, it is said, will not encrust the material: thus the effect of the brick-red and the green would be permanent. The Patent Stone Bricks of Messrs. Bodmer Brothers, of Newport, Monmouthshire, are exhibited by Messrs. Rosher. We mentioned them some weeks ago. They are perfect in shape, and are of excellent colour, resembling stone. They consist chiefly of sand and lime in certain proportions, well mixed; and are subjected to great pressure in moulds. When removed from the press, they are piled in heaps; then induration commences, and penetrates to the centre. They do not deteriorate by exposure, it is affirmed, but become harder and more durable; whilst frost does not affect them, and they are not injured by being immersed in water: "hydraulic bricks" specially for sewers and similar works, however, are made. The bricks and tiles of Mr. J. K. Cooper, of Maidenhead, are made of superior clay subjected to great pressure, and are found not to be affected by frost. The cresting, in one piece with the ridge-tiles, is excellent in the different patterns, simple, and calculated to tell clearly in a view from a distant point.

Mr. J. M. Blashfield, of the Stamford Pottery, and Messrs. M. H. Blanchard & Co., of Blackfriars-road, rival one another in their terra-cotta manufactures. Any defects of the manufacture, as twisting from the firing, have been reduced to the minimum, and indeed are only observable in the deviations from right line, of the cornices in Mr. Blashfield's work, where the joints are. It is questionable whether pointing in *white* mortar, allowing joints to show, or colouring the mortar to resemble the bricks, is best. The diaper ornamentation of Mr. Blashfield's shafts might centre better than it does with the other ornamentation. All these defects of terra cotta and ornamental brickwork, especially the deviation from perpendicularity of ornaments that should fall over one another, and the prominence of the mortar joints, are observable in the arcades of the Horticultural Gardens, and much reduce the value of what is otherwise excellent work. Another point to which the attention of all producers of terra-cotta ornaments should be directed, is that which should never be forgotten by manufacturers, the desirableness of not attempting work so minute as to be unadapted to the material (unless with subsequent chasing or hand-finishing), or work which, dependent for its effect upon some amount of undercutting, cannot receive that. Mr. Blashfield exhibits the largest and best collection of specimens; but the banded and spirally-fluted shafts of Messrs. Blanchard's work,—ornament filling in the flutes in one shaft, and the hollow of the band in another,—are equal to the banded and diapered shafts of the Stamford manufacturer. Bad proportion of the diapering, and bases, to the shafts in the smaller columns of one manufacturerer; and a similar defect in the capitals of the other, and the inferiority of their ornamentation to that of the best Corinthian capitals, however prove to us that the architect should never omit the attention on his own part, to design, even where he is about to avail himself of manufactures generally so good as are those of both the producers we have named. Mr. Blashfield's cornices,—some of the specimens that were in the International Exhibition,—merit particular attention. The misapprehension of the art in such works, and of their interests, by manu-

facturers, however, was evidenced last year by the exposure at Mr. Blashfield's stall, of a cut professing to represent one of the cornices, and which had appeared in a popular art-periodical. The cut represented each sinking or projection of several inches, as little more than one inch, and changed a bold and cleverly-designed work into a flat and spiritless thing. Amongst Mr. Blashfield's best productions are certain balusters which are scarcely distinguishable from wrought balusters, and being very slender are stronger than they would be in stone. The vases exhibited are in great variety, from large-sized vases adapted for gardens, down to small Greek vases with subjects in red and white on black ground. The latter, not attempting relief, and the red clay vases perfectly plain, are more successful than the vase about 6 inches in height where the figure ornament is in high relief. One of the large vases, a common pattern with eagles as handles, is an admirable specimen of work. The other objects displayed, include trusses, frets for balustrades, bricks for chimney-shafts, and mullions, and a bust and a figure of Ceres showing the merits of the manufacture as applied to the sculptural accessories of buildings. The clays are red, white, and stone colour. The principal cornice is effectively treated with incised ornaments, coloured. "Porcelain stoneware warranted to stand frost" is shown as used in the base of a fountain at Woodhall Park, Hertford. The tiles include specimens of those used for the footways of Westminster Bridge, and varieties of mosaic, down to buff and red tiles for cottages at 5d. per foot. The red brick cornice costs for the bricks, 4s. a foot. Messrs. Blanchard's space includes specimens of their terra-cotta steps, for geometrical staircases, which may be built as Portland stone steps, but are lighter and cheaper, and probably more durable. The treads and risers may be ornamented with *tesseræ*; or the risers may be perforated; whilst the soffits also can be ornamented. Messrs. Blanchard further exhibit trusses and balusters, and an excellent vase in red clay; but one of the most important of their applications of terra-cotta, is to fencing posts. Such posts, of the material, would be durable, and particularly suited to marshy land. Each post is made in three pieces, which fit together telescope fashion. As to the strength of such posts and columns, one of the columns used at the Horticultural Gardens, when tested, bore a pressure of 20 tons. Messrs. Ransome's patent stone is exhibited in the form of balustrades and window dressings, which certainly testify by their right lines, to the superior art-value from not burning the material as required in the case of terra-cotta. We discover, however, more disintegration or liability to fracture in the arrises, than would generally be asserted of this material by those udging favourably of it. A bust of Mr. Bidder, which is exhibited, only testifies again, that a material and manufacture have their limitation, and that the siliceous stone cannot realize some of the touches producible in soft clay by the fingers, or in marble by the chisel.

Specimens of the geometrical mosaic of Messrs. Maw & Co., for pavements and wall-decorations, occupy as before, one end of the west gallery, and include some of the best of the many good designs produced with the assistance of architects to whom the manufacturers, with judgment, have applied. Generally, in inlaid encaustic tiles, especially those designed for use in churches, old patterns have been repeated by manufacturers, so much as to interfere with the appearance of freshness, in fact art, which there might be in the walls and the superstructural portions of a building. The tiles suitable for churches, from the manufactory of Mr. Godwin, Lugwardine, Hereford,—and which are shown combined in a drawing, in another part of the Exhibition,—are the best we have seen of the class; and very good they are. The same exhibitor's collection includes many other varieties of tiles as well as *tesseræ*, suited for use in the corridors of houses, conservatories, and like situations. Good specimens of mosaic, and encaustic and other tiles suited to pavements, and to reredoses and wall surfaces, are exhibited by Mr. W. E. England. Amongst them is a copy of mosaic from the Basilica of Santa Maria Maggiore, a laboriously but skilfully executed piece of work.

There are other things in the gallery which we must notice next week.

CONDITION OF BETHNAL-GREEN.

As we extend our wanderings through the widespread distress of this district, the sufferings of large numbers become more and more apparent. In house after house, in almost every separate room of those houses, there are families in the greatest poverty. In many of these rooms, on the floors, are rolled up bundles of tatters, which are all the bedding now left. In some rooms there is a bedstead, but so old and rickety that neither a pawnbroker nor dealer would take any notice of it. This, however, serves as a seat by day and an uncomfortable resting-place at night. There are no other chairs or seats which would bear a person's weight. The small children squat or roll about the floor. In upwards of thirty apartments no drawers, chests, clocks, or other of the usual furnishing of such places were to be seen, and we noted with pain that in the houses of many of the weavers the plants and flowers which heretofore enlivened even the poorest places, have disappeared, and the crockery and ornaments in which they formerly took much pride, have become scarce and broken. The dresses of the young women are less neat, and in every direction there is too plain evidence of the decline of comforts during the last two or three years.

In the houses of many of the better-off weavers we miss articles which were commonly found there. The beds, but little cared for, are rolled on the floors beside the looms; and in numerous instances the looking-glasses, pictures, the brightly-polished mahogany tables, and other matters highly prized, and which had been long in the possession of families, have disappeared.

During our recent examination of these homes we met with but few evidences of drunkenness, but saw careworn women and half-fed men and children, who exhibited courtesy that would surprise visitors who have not mixed with this class of the metropolitan population. It was found that the accounts given were rather with a view to disguise than to make a parade of their poverty.

Few persons travel from West London or from the provinces to the eastern parts of the metropolis, for there are no "lions" to be seen. The Tower and the docks have interest, but throughout the miles of streets what is there to tempt the general traveller to move in this direction? In order, therefore, to make the condition of a large multitude living in Bethnal-green and Spitalfields understood, it is necessary not only to give some further account of what we met with here, but also, for a useful purpose, to make some comparisons between the people in East London and those in Lancashire. In the latter place the extent of distress is enormous; there is *entire cessation* of work by a multitude. Mr. Commissioner Farnall, in his last report of the 5th inst., says, "There are now 414,498 persons who are either receiving out-door relief from the guardians, or who are maintained solely by the local committees within the twenty-seven unions. .....Independently of the above number there are 11,458 within the workhouses of those unions, making a total of 425,956, or 21·5 per cent. of the population. These figures show that, if the Relief Fund fails, there will in all probability be more than *one-fourth* of the population who will require support from others, many of whom—shopkeepers, the proprietors of dwelling-houses, —are just now on the verge of pauperism themselves. The present arrangements, without some sudden and unexpected beneficial change, cannot be much longer continued. There must be extensive aid devised for those suffering districts. There are future hope and sunshine for Lancashire; but while the clouds are passing away, emigration and some other means besides those now in use must surely be employed.

In those parts of East London to which we now particularly refer there seems no chance of improvement in the instance of the hand-loom silk-weavers. It is impossible that they can rear families with a prospect of future usefulness on the receipt of 8s., 9s., 10s., or even 11s. a week, when they have work; and, moreover, as we have said, there is no dependance to be placed on this miserable pittance, which, as time passes on, will be reduced in amount to those who follow this kind of work. When driven by downright starvation to make application for out-door relief from the parish (in the vain hope, as we fear, of work getting better by and by), this as a general rule is refused, and the offer is made for them to go into the union. This means the separation of man and wife, and of fathers, mothers, and children. It means also the sale of those articles which, however scanty and of but small-money price, still constituted a home. It means paupers for evermore.

On refusing to go into the House, the people are left in this great and rich city in a state of starvation. It has been shown by the evidence of medical officers and others that, in several instances lately, there have been in the Bethnal-green district cases of actual death from hunger; and who can rightly estimate the number of those who, through the want of pecuniary means and their objection to ask for parish assistance, the unwholesome condition of the houses in which they have been forced to dwell, and the want of sufficient clothing, have died, without any public note having been made of their miserable end?

Several women, who had families of children, on being asked, mentioned that the number living was about half of those who had been born. This is very different from the results as regards persons in good condition who attend to the sanitary laws, which they have the means of observing. Fortunately in her Majesty's family, for example, no child has been lost, and it will be generally seen that, with similar good management, corresponding results will be the consequence. But in this neighbourhood, in the present condition of the people, the decline of wages having driven them often into worse lodgings, to a greater extent of dirt, in their clothing and persons, and the want of sufficient food, not to mention the ignorance of the people on points regarding health, it is not wonderful that fever, small-pox, and other preventible disorders should be generated.

In the course of our progress we heard no complaint against those in authority, and from no part of the land did there come warmer wishes than came from this neighbourhood on the occasion of the marriage of the Prince of Wales. They blame, as has been already said, in their ignorance of social economy, Mr. Gladstone and others. Good teaching would be useful, and be the means of causing many in this district to turn their labour into fresh channels. Every means towards this will be of advantage, for we see in East London how sadly thousands of the population are going to waste and degradation; great necessity exists for taking the condition of these people into consideration. But clear as their sad state is, it is not easy to find a remedy; we would, however, suggest,—

1st. The necessity of making the extent of the distress here clearly known; and for this purpose official inquiry is necessary: the evil is a great and spreading one.

2nd. Assistance to the local committees by considerable funds, which, if the need were known, would soon be forthcoming.

3rd. Help to the sons and daughters of silk weavers, and others whose employment has failed, and who have honest character, to find situations—assisting those who are willing and suitable to emigrate.

4th. Extension of the means of visitation to houses, so that those who might be assisted with advantage should be known.

There are, at the present time, agencies at work for the purpose of endeavouring to remedy the evil which now exists, and which, without vigorous efforts be made, must still further increase. The clergymen, and other influential inhabitants of some districts, have formed societies for visiting and other purposes. In some departments those gentlemen have been assisted by aid from elsewhere—as in the instance of "Nova Scotia-gardens,"—but, for the most part, the power and means of the district associations are insufficient for the need. Few families are at present visited. The cause of this is, no doubt, the denseness of the population, for in such a parish as Bethnal-green the number of families is not to be counted by the houses, but by the rooms. In connexion with these societies, there is a certain amount of good done in the way of affording temporary relief—money and clothing,—but still greater is the advantage of assisting the children to find employment; of directing the attention of medical officers and parish authorities to particular cases; and in having the children sent to school.

On the way to Bethnal-green, in Mare-street, Hackney, we called at the "Elizabeth Fry Refuge," an establishment which is open for the reception of female prisoners on their discharge from prison. This institution, the objects of which were laid down by the late Mrs. Elizabeth Fry, has been in existence thirteen years. During that time 1,150 women of all ages, who have been convicted of various offences, and who, at the end of their imprisonment, had no home to go to, have been received.

During the last year ninety-eight women and girls have been inmates, some of whom remain for a few days or weeks, others for months, as the committee of ladies find the opportunity of disposing of them satisfactorily, with a view of training them for domestic service and forming habits of industry. The people here are employed in needlework, household occupation, and laundry work, the latter being especially remunerative, having produced last year a clear profit of 110*l*. Many of the cases which have been brought here are of the most painful description. Some are young girls who have come from country places to seek service, and who, by an extravagant love of dress, have been led to commit theft; others have done so for the purpose of obtaining drink; and for the most part it is found that those who come have lacked education and sufficient early moral training. The influence which the matron and lady visitors have on the inmates is great, and has had a beneficial effect: as an instance we will mention one woman, aged twenty-eight, who had been in prison twenty-eight times, and at last had a sentence of four years' penal servitude: she remained seven months in the refuge, and was then sent to service, where she has given satisfaction, and kept her place for more than twelve months. Of those who have been in this institution during 1862, twenty-four were sent to service; twenty-four to their friends, some of whom resided in distant parts; three, abroad; to hospitals, two; Barker-street Home, fifteen; Cooper's Homes, two; Manor Hall, four; Dalston Refuge, two; one to her parish; Magdalen, one; School of Discipline, one; Field-lane Refuge, one; left to seek work, four; left at their own request, fifteen. The matron, a lady who seems devoted to her difficult duty, mentioned that there was a demand for those girls and women who, after a time of probation here, could be recommended, either as domestic servants, or to work in laundries, and so forth. There is a very great demand for good washers and ironers; those engaged in this way on a large scale complain that they are unable to get suitable women for the work. Very properly, efforts are made to reclaim the criminal part of our population; but surely those who are untainted, but who are in the way of temptation and distress, are more worthy of assistance; and when hearing of the good which is done at the "Elizabeth Fry Refuge;" how readily persons of good position take young women from this place into their homes; we thought that by means of effective organization, by the extension of the societies which at present exist, and by a well-arranged plan of visitation, good employment might readily be found for some hundreds of worthy girls and youths who are at the present time in a state of destitution and without hope.

The necessity for well-directed exertions on a large scale, for general assistance to those who are with totally inadequate means endeavouring to stand against the great distress, and the opportunity of emigration, can only be understood by those who have made it a duty to inquire into the existing condition of the district.

THE VIRTUES OF PRECIOUS STONES.

We are accustomed to look at gems only in an artistic light: our forefathers have regarded them in other aspects. Precious stones were prized in old times for the medicinal value they were supposed to possess, as well as for their intrinsic worth and ornamental properties. Apothecaries of old rejoiced in their secret virtues. The amethyst was thought to prevent drunkenness. The diamond was considered a preservative against poison, as well as to possess the virtue of driving away distempers of the mind. The silver-coloured aspilates was also useful in cases of lunacy; and there was a sparkling Arabian gem of the same name, which was said to be found in birds' nests, that was considered good for the spleen. *Lapis Armenus* was prescribed by physicians to purge melancholy humours, an otherwise indefinable malady with which former generations appear to have been frequently afflicted. *Lapis hæmatites* was deemed effectual in stopping bleeding. *Lapis Judaicus*, a small, olive-shaped, streaked stone, found in Judea, pounded in a mortar and taken inwardly, was thought a certain cure for the stone. *Lapis Nephsiticus*, brought from New Spain, only required to be bound upon the arm to cure the same complaint.

The ancients were acquainted with two stones, possessing exactly opposite properties, either of which would be an invaluable adjunct in the hands of our sanitary reformers. The one was *Assius lapis*, brought from Assus, in Mysia, used for coffins because it was thought to consume the bodies inclosed in them; the other, *Chernites*, which had somewhat the appearance of ivory, used for the same purpose, was believed to preserve the remains deposited in them.

Arabus lapis, when powdered, was esteemed as a tooth-powder in the days of the early Georges. A black bituminous earth, called Ampelitis, was applied to vines to make them thrive. There were artificial stones in as good repute:—*Lapis admirabilis*, made of white vitriol, saltpetre, alum, and sal-ammoniac, was thought highly of as a cure for wounds, scorbutic ulcers, and cataracts of the eye. *Lapis medicamentosus*, made of calcined vitriol, litharge, alum, and "Bole-armenick," was considered invaluable for its property of cleansing the eyes in smallpox and for stopping bleeding. *Lapis prunellæ*, or saltpetre prepared in a peculiar mode, was accounted very beneficial in fevers and quinsy.

Precious stones were highly prized by alchemists as being of the first service in the transmutation of metals. The *ampelitis* was believed to attract gold as the loadstone attracts iron. *Calaminaris lapis* was mixed with copper to turn it into yellow brass. They entertained great hopes of antimony; but when they found that it would not produce gold out of a baser metal they called it the *philosopher's wolf*.

Magicians appear to have been more successful in the uses to which they applied rare stones. *Chelonitis*, so called from its resemblance to the eye of a tortoise, was believed to be the instrument employed by enchanters in stilling tempests. The virtue claimed by Dr. Dee for his divining "beryl" is of a different order. This, he declared, presented to his seer, Kelly, an Irishman—who corroborated his master's assertions,—visions of departed persons. Those who wished to know whether their lamented friends were happy or not could ascertain their exact condition by applying to Dr. Dee, who then directed Kelly to look into the beryl. It was preserved by Horace Walpole. When it was sold with its companion curiosities at Strawberry Hill, it was found to be, simply, a ball of cannel coal. A blind credulity in the properties of magic crystals was one of the fashionable precursors of the present spirit-rapping movement. We allude to the crowded receptions of Zadkiel in 1850. His crystal, which had belonged to Lady Blessington, and had been purchased at the sale of her effects, is described as having the appearance of a turned mass of pure crystal. It was spherical in form, and about 4 inches in diameter. Its especial virtue consisted in its ability, to quote from Zadkiel's Almanac, to give us "most important information of the actual existence of the soul after death, and of the state in which it exists until the judgment." Like Dr. Dee's beryl and modern spirits it required a *medium*. The seer, a youth, looked into the crystal, and was then asked what he saw. As his reports corresponded with what he thought he was required to see, the owner of the magic mirror drove a prosperous trade.

Another stone, *brontias*, was supposed to fall from on high in thunderstorms. And as another instance of the exaggerations that obtained, the bloodstone, *androdamus*, was declared to bleed when rubbed on the whetstone.

There was a stone in Padua that was doubtless very precious in its way to many people. It certainly possessed a marvellous virtue. It was called *Opprobrii lapis*, or the stone of reproach. People who owed money that they were unable to repay proceeded to this stone, which was set up in the most public part of the town, and acknowledged the amount of their debt, mentioning the person to whom it was due, and declared their inability to make satisfaction. Upon which they were freed from all prosecutions.

We moderns have not quite given up the idea of finding a jewel in the toad's head; that is to say, the accepted possibility affords a simile to poets when they would indicate hidden treasure. Our forefathers looked for precious stones in still more unlikely places. They found beautiful, white, oval stones in the heads of snails. Probably the finding of pearls in oysters is the origin of these fallacies.

We need scarcely allude to the great antiquity of the popular regard for gems. The jewels Abraham's steward gave Rebecca at the well may have been but wrought gold and silver; but those on the ephod of Aaron we are told were precious stones; and among the presents the Queen of Sheba brought King Solomon were gold, spices, and precious stones. This appertains more to their genealogy than to their properties.

When we are examining the jewelled wedding presents of the Prince and Princess of Wales, it will not detract from their interest should we call to mind the secret virtues attributed to precious stones in former ages.

HISTORY AND ARRANGEMENT OF THEATRES.

In the paper on this subject read by Mr. C. J. Phipps at the Bristol Architectural Society, the lecturer traced the rise and progress of the drama and spectacular representations in Greece and Rome, and explained the plans of the ancient theatres, which were illustrated by numerous large-scale plans, amongst others those of Crete, Pompeii, Athens, and that of Marcellus at Rome. He enlarged upon the advantages gained by the semicircular form, with the vast area of seats rising one above the other, both as regards sight and sound, and the uses to which the several parts were assigned. In the Grecian theatre comparatively little was done upon the stage—the open area being devoted to the principal portion of the performance—the chorus and dances. The part was called by Vitruvius the "orchestra." Now in the Roman theatre this area was occupied by the senators and patricians, as being considered by them, and rightly, the best part for seeing the performances which took place upon the stage. The proscenium, or stage, in the Roman theatre, projected farther into the orchestra than in the Grecian. The stages were of very slight depth, the back wall being generally built up into a sort of architectural façade, with columns, doors, and entablature. We have, however, records of painted scenes being hung down over this, and the triangular prisms at the sides doubtless concurred with these, as forming wings to the scene. These theatres were all open to the sky, with only the corridor at the extreme top of the stages of seats roofed in, this part being generally assigned to the women. He then proceeded to explain, from plans, the principal of the Italian theatres, the oldest of which was that built for the Olympic Academy of Vicenza, in 1580, by Palladio. The Farnese theatre of Parma was completed in 1628, and is famous for its acoustic properties, as also for its great size, being 130 feet from front of stage to back of seats. This theatre, which is a semi-circle, with the sides inclining in a square line towards the stage, has a large open space between the commencement of the seats and the stage, probably for grand processions. Most of the other more modern theatres were of the oval shape, more or less elongated. One of the best, though smallest, was that at Imula, in which the auditory takes about two-thirds of the oval, which however is continued over the stage in the ceiling to complete the geometric figure, supported on four columns or caryatides, forming three openings on the stage. "Now this arrangement," continued the lecturer, "seems to me one which is capable of being turned to good account in our modern theatres, if you are fortunate enough to get a stage director to thoroughly appreciate its value. The columns or caryatides on the stage should be moveable, and calculated to receive drop scenes either before or behind them. This would give an opportunity of having three distinct struts leading towards the front of the stage, and would do away with the absurdity of several persons being on the stage at the same time, and not supposed to see or hear each other. The illusion, so necessary to all dramatic performances, would have its full force, and there would be room for more correct scenic representation, instead of our present arrangement of side scenes, with their impossible perspective. The wings also would be completely masked. This plan would also render much more effective the representation of farces and the lighter drama, as three separate and distinct rooms would be formed, each properly constructed with walls, ceiling, and only a reasonable number of entrances, and requiring very little scenery. A manager with only a small stock, could give a new scene for almost every drama, instead of now repeating the same over and over again, in all sorts of plays. Then, for the grand opera, ballet, or enlarged scenic display, the whole of what I may call the second proscenium, could

be cleared away, raised or lowered by aid of the present machinery or hydraulic power in a short space of time, even between the acts, opening the whole of the stage free as at present; for, in addition to a curtain at each of the three openings, there could be a grand drop to shut in the whole stage opening. With this arrangement the semicircular form for the auditory could with advantage be adopted, as it would admit of a proscenium opening of any width. The lecturer then touched upon the French theatres, especially that at Bordeaux, the Théâtre Français, at Paris, and the new theatres that had lately been built there, the latter of which, however, he said he had not been able yet to visit. Of the London theatres for the representation of the drama, there were none, he said, with the exception of the new Adelphi, which called for special comment—they were all more or less alike, with little or no attempt at improvement. All erected under the influence and control of old and musty stage traditions, with little real comfort or convenience in any of them, either for the public or for the artists who minister to the public amusement; indeed, the present idea was *chiefly* that of amusement, and any attempt at imparting *instruction* by theatrical representations was ignored. One of the last (Drury-lane) had been so altered from its original form as scarcely to resemble the plans which we have in the published description by the architect, Wyatt. The New Adelphi, however, is an advance in the right direction, as founded more directly upon the semicircle. The two upper tiers take the circular form as in the ceiling, the dress circle having a balcony projecting in advance, returning by convex curves to the edge of the proscenium pillars. Now in the front the sight from the balcony is very good, but at the extreme side in the second or third row, and especially in the boxes at the back, more than half the stage floor is cut off by the curves of the balcony front. One reason for this is the height this tier is raised above the stage, to allow of the area of the pit running under it. If on a level with the stage, this defect would be lessened: and this leads me to notice the very objectionable practice of extending the pit in this way under the boxes. The pit, in all theatres, is the best part, and should be throughout at the highest price, forming, in fact, a continuation of the first circle. The extending it is destruction to the design, and apt to cause great defects in the sound, to say nothing of the intolerable atmosphere which a crowded pit is sure to produce. And yet we had a hard struggle, even at Bath, against the all-powerful cry that "the pit must be large, for it is the pit and the popular shilling that pay." Having alluded to Covent Garden theatre, the lecturer then gave a short description of the Bath theatre, explaining that the keeping within the compass of the old walls, which were standing sound and good after the burning of the old theatre, compelled him to follow in a measure the old beaten track. The lines of all the tiers had the same position as the balcony of the Adelphi, though the defect before described had been obviated by reducing the return curve next the proscenium, raising the second row of seats at sides considerably, and by taking the lighting line from the stage extremely acute. The result proved that those at the sides of the theatre had equal advantages of sight with those in the centre. The comfort of the audience had been especially provided for; and, although the space for the box-tiers is considerably greater than in the old theatre, yet, by allowing each person an arm-chair, the accommodation is reduced by some 150 seats. There are, also, two divisions in the boxes, wide gangways being left between the blocks of seats for easy means of access and egress. From this cursory glance at some of our principal theatres let us consider what are the requirements of a theatre, before and behind the curtain; and, premising that a theatre be considered one of the public buildings of a city, as such, it should have an architectural elevation, which, as far as possible, should externally take the same form as the interior, with ample entrance for each class of spectators, as widely separated as possible, so that a crowd of persons shall not mingle, or jostle against each other. All the entrances should communicate with their respective departments by wide and direct staircases,—having retiring-rooms and conveniences in all cases adjacent. Internally all walls between the corridors and the auditory are best of stone or brick, to keep back the sound of persons walking and talking in them; whilst the inside lining of these walls should be in thin strips of wood, which is a good conductor of sound. All the doors from the lobbies should shut flush with the inside of the auditory, so that no breaks in the wall may impede the sound, notwithstanding a manager's supposition so often urged that several persons can stand in the recess of a door; and all doors should open externally throughout the building, to facilitate exit in case of panic. In cases where the pit only extends to the area within the box fronts, the doors are better near the stage, than at the remotest distance—as by the time the voice reaches the back it becomes feeble, and is easily destroyed, even by a whisper; and this must be more so when doors are being continually left open. The columns supporting the various tiers are best of iron, if any are required, as allowing a less diameter, and consequent less obstruction to the view; and when used, should recede from the points of the tier as far as possible. I believe the principle to be the correct one of planning the several galleries so that each successive tier shall recede from the one below it: this would be found beneficial to sound, as exemplifying the acoustic curve, and would be beneficial to the general design. The requirements behind the curtain are multitudinous—there are so many departments, each all-powerful in their particular sphere, that any defect is sure to cause loud and immediate complaint, and often serious hinderance to the business of the stage. And first, as regards the stage. It should be clear at the sides, with sufficient width to allow a free passage for the *employé*, when the large flats are in the wings; beyond this again, docks for the temporary placing of scenes arranged in recesses with lifts for the carpenters to go up and down independent of staircases: beyond these docks should be free passages opening on to dressing-rooms for the performers, ladies one side, gentlemen the other, with a large green-room, where they can assemble before going upon the stage, within easy call of the prompter. In addition to this green-room, and probably on the other side of the stage, should be another large room for a like purpose, for the use of the chorus, the ballet, and the supernumeraries. Above the dressing-rooms should be wardrobes with tailors' and dressmakers' rooms, and lifts up and down, with dressing-rooms for the chorus and the *corps de ballet*. On the floor below the stage should be supernumeraries' rooms, and rooms for the band adjacent to the orchestra. All the dressing-rooms should have water laid on to them and fitted with lavatories and dressers, with lines and clothes-pegs all round. The magazine for properties should be on the stage floor between the green room and the prompter. The magazine for the scenery should lead directly off the stage, with racks for the cloths or scenes on rollers, and grooves for the wings or scenes strained on frames. The scene-painting room should be like those at Covent Garden and Bath, on level with flies, with the power, by working in a slot, of being lowered to the stage floor, where the scenes could be easily and quickly put in their respective places with little trouble. In connexion with the painting-room should be a private room for the artist and convenience for his attendants in the way of troughs, fire range, &c. Adjacent to or communicating with the painting-room should be the workshops. The manager's room should be near the stage, with a separate external entrance communicating both with the stage and the front of the house—the whole, if I may be allowed to quote a friend, "as inaccessible and mysterious as possible, for no one is so besieged with talkers and importunate persons as a manager." In connexion with his rooms should be those for the secretary and treasurer, and perhaps also a library of reference; porter's rooms also near the stage entrance, and kitchens, stores, and other rooms in convenient positions. Of the stage itself and its working we have yet much to learn: no method has, I believe, yet been satisfactorily introduced into this country for saving the enormous number of hands necessary to do the work. One thing is, or should be, an axiom. The roof over the stage should be sufficiently high to allow framed cloths and scenes being taken up without any doubling or rolling, as adopted in the Victoria Theatre, at Berlin, where the height above the stage is some 90 feet: the working altogether on this stage is considerably in advance of anything that has yet been attempted, and deserves especial commendation. The mezzanine, or floor under the stage, should not, in any case, be less than 8 feet high, the cellars or sinks going down to a depth of from 20 to 30 feet again under the working part of the stage, so that large pieces of scenery may be taken up and down. The stage floor should be constructed like sliding or rolling shutters, so that the whole or any part could be worked off from the centre, allowing for the introduction of traps at any part. In most of our theatres the wings or side scenes run on the stage in grooves fixed under the fly floors. On the Continent they often run on small tramways on the mezzanine, fixed to the wing or gas ladders; and, at Covent Garden, the same principle has been imperfectly carried out, as there the wing works on tramways placed a few feet below the stage floor, completely cutting the mezzanine in two, and compelling persons to bend their backs in walking, which must, to say the least, be extremely detrimental to the working when expeditious movements are so essential. This arrangement of working the wings or the mezzanine floor may, perhaps, do for operas and for the continental dramas, where one scene often, and, I may say, generally, suffices for a whole act; but, for the English theatre, where dramas, and particularly Shakspeare's plays, are performed, requiring often from twenty to thirty scenes, it would be a simple impossibility. Having made some observations as to the lighting and ventilating a theatre, the lecturer concluded with some remarks on the subject of decoration, advocating the flat treatment.

STEREOCHROMY OR WATER-GLASS PAINTING.

This process has gained a triumph in the report of the gentlemen who have just pronounced an opinion on the most desirable materials for the execution of the paintings in the Houses of Parliament. Frescoes executed in lime have been found extremely unsatisfactory, and the members of the Government commission of inquiry (among whom may be named Mr. Ruskin, Mr. L'Estrange, Mr. Gambier Parry, Mr. Maclise, and Professor Hofmann), have at last decided that future frescoes should be painted by the water-glass process, which is believed to be a perfectly permanent mode of painting.

It may not be uninteresting to our non-chemical readers, to give a few particulars of the system of stereochromic painting.

M. Johann Ness Fuchs is the chemist to whom the credit is given for the discovery of the method of dissolving flint, which dissolved flint is known as water-glass, or soluble silicate. This chemist found that by fusing silica with an alkali (soda or potash), he made a glass which was more or less soluble, according to the quantity of alkali employed. Let us here remark one important fact, the knowledge of which has of late materially aided in the success not only of stereochromy, but of all applications of water-glass. Silica or flint, we have already said, when fused with an alkali, forms a silicate of the alkali used. This silicate may, by using a large proportion of alkali in its manufacture, be made so soluble as to dissolve in water at (212 deg. Fahrenheit) the boiling point. But the employment of so large a proportion of alkali seriously interferes with the subsequent uses of the solution. If, on the contrary, the silicate be made with a minimum amount of alkali, it nearly represents bottle-glass in its appearance and general characteristics, and is only soluble under a high pressure of steam; and thus, according to the pressure available, so may the alkalinity be decreased, and consequently the value of the solution increased. We may add further, that the more neutral or the less alkaline the silicate the longer it takes to dissolve; a long continued digestion, even at a high temperature, being necessary to reduce that silicate which nearest approaches to neutrality.

This silicate, then, is the base of all operations in stereochromy, which process has been suggested by the firm agglutinizing power of the silicate and the extreme hardness and durability of silica. Any substance mixed with the former, especially if it be of great thickness (*i.e.* heavy specific gravity), will be so concreted that scarcely any natural material could vie with it in toughness when perfectly dry. The latter condition is a *sine quâ non*; for if exposed to the action of water, or even damp, it will return to its original gelatinous condition. If, however, the substance concreted have any chemical action on the silicate, such, for instance, as by eliminating carbonic acid, the alkali will be changed in its character, becoming a carbonate; in which case it loses its solvent power, and the silica will be set free in an insoluble form to combine with or influence more or less the surrounding particles with which it was concreted. Again, if only a thin film or coating of a nearly neutral silicate be exposed to the action of the atmosperic air, free from the effect of rain or damp, there will be found in the atmospere sufficient carbonic acid to act upon the alkali as in the before-mentioned manner, and an insoluble pellicule will be formed. On the contrary,

if a highly alkaline silicate be used, the alkali overcomes the power of the carbonic acid of the atmosphere, and constant efflorescence or deliquescence is the result. Fuchs, in his process of stereochromy, perseveringly tried all available means to perfect his system, but it has been left to Kaulbach, and others since his death, to reap the field his labours had sown. His first efforts were directed to the use of carbonated pigments and a silicious menstruum; but here one of the greatest difficulties assailed him. The decomposition of the silicate by the carbonate was so rapid that, before the brush could make the desired touches, the paint had coagulated. And it should here be observed, that when once this coagulation has taken place, it is a certain sign that the chemical action has also been completed; and if the contact between the particles thus formed be once destroyed, they are perfectly inert, and will not again cohere (any more than an effervescence can be restored by the addition of any amount of acid when once the alkali is neutralized). Fuchs, however, did adopt this system, for want of a better, adding silicate to the coagulated paint to restore it to the desired thinness and fitness for working; but he of course knew that he was then dependent entirely upon the agglutinizing effect of the silicate and the carbonic acid of the atmosphere for its future insolubility.

Various substances, such as oil, grease, milk, size, &c., having been tried for retarding the quick action of the silicates, were found inadmissible on account of their introducing an element subject to oxidation, and thus disintegrating the colour after it had been laid on. Then various mediums were tried to convey the colour on the ground without the admixture of silicate in the process of painting, but to apply it afterwards with a brush as a coating. The softest fitch, however, was found to disturb the colour and more or less damage the picture; the height of some of the colours prohibiting the use of a sufficiency of the binding medium. All these difficulties, it is asserted, are removed by the system at present adopted by Messrs. Kaulbach, of Munich, and Mr. Maclise in our own country. The method adopted by these gentlemen is as follows:—The colours, which are duly prepared to withstand the decolourizing effect of the alkali, are laid on with water only; and when the artist has completed his picture, he takes a syringe, invented and constructed especially for this purpose, and throws upon the painting a mist of the silicate of potash. This mist somewhat resembles a Scotch mist, in which the atmosphere is highly charged with water without anything like a liquid drop being apparent. All, then, depends upon this mist falling so gently upon the painting as to saturate it without removing or interfering with one atom of its surface. When, however, the painting has received the first application of the silicate, its colours are so far fixed that subsequent applications may be made with less delicacy; and when completely saturated the colours are so permanently fixed that those which contained carbonic acid, such as carbonates, or sulphuric acid, such as the sulphates, are irremovable even by scrubbing. Other colours or pigments depend upon the rules beforementioned for their permanency.

In ordinary painting for external purposes a modification of the same system is already in use. The patentees are Messrs. Bartlett, Brothers, & Co., of Camden Town, and their system we believe to be the use of a tenacious material, such as pipe-clay to hold the carbonates on the surface to be operated upon until the fixing solution, which we believe to be a silicate of potash, can be applied with a brush in the usual manner, which renders the whole coating permanent.

We shall doubtless see the silicates in their improved manufacture applied to other utilitarian purposes, and believe that valuable results will follow from a more thorough knowledge of this extraordinary substance.

INSTITUTE OF PAINTERS IN WATER COLOURS.

Taking advantage of the opportunity afforded by a complete reconstruction of their gallery, the Association of Painters in Water Colours, long and favourably known as the "New Society," have very justly considered that they ought to enjoy their well-earned and independent prosperity under a more distinctive title; and there can be no doubt of this step being well advised, as is with sufficient reason intimated in the few preliminary words of address by which the change of name is announced in their catalogue: "When, upwards of thirty years since, a second Exhibition of Water-Colour Painters was established, the name of 'The New Society of Painters in Water Colours' seemed the most appropriate designation which the Society could bear. The word 'New' is now an anomaly. The Society has attained a maturity which justifies its assuming a more appropriate title, and the opening of its recently-purchased and newly-built gallery has been deemed an occasion on which this change of name is at once justifiable and appropriate."

Although in some degree appearance has been sacrificed to utility, the gallery is commodious and very efficiently lighted, admitting of a large number of drawings being favourably hung and perfectly seen. This being the chief desideratum, the members are to be congratulated upon their new premises.

The collection brought together for the present year's exhibition is one of the most admirable that we remember, imputable less perhaps to individual excellence than to the high standard of its aggregate; though that Mr. L. Haghe is as usual magnificently conspicuous,—never suffering but in comparison with himself,—his principal work (62), "The Doge Andrea Dandolo leaving the Church of St. Mark, after taking the Cross,"—if it do fall short in exemplifying him thoroughly,—will attest. None but he could combine light, colour, and space with more realistic force, even in the absence of his customary richness and depth; a want more apparent still in his second contribution, "Benvenuto Cellini and Francis I. at Fontainebleau," (273) which must depend most upon its merits as an architectural interior, and these are great.

Mr. E. H. Corbould is another of those in whom the *prestige* of the institution subsists, and who as fortunately for himself as for those who could ill afford to lose him, rejoins the fraternity;—not rich enough in the imaginative element to have spared one easily so intimately connected with their earliest association and successful establishment. Of his three works, "A Memorial Design" (223), sent by her Majesty the Queen, is the most remarkable, since it not only illustrates his knowledge of Mediæval accessories, but the aptitude with which he has carried out a very appropriate connexion of all those high attributes that find their summary in the word "chivalry" with memories so clearly defining its significance,—making it a fit symbol of the late Prince Consort,—has a value of its own. A balcony group, introducing a knight with his family watching the proceedings on "The Festa Day" (72), and a gorgeous portrait with claims as a picture beyond its recognizable likeness to the accomplished "Ladie of Cromwell House" (Mrs. C. J. Freake) (8), are both brilliantly characteristic examples.

In addition to a pretty pair of damsels, one in "The Morning Beam" (36), the other, perhaps less given to early rising, but more pleasantly circumstanced and occupied on "The Sunny Side of the Wall" (44), Mr. Henry Warren has his almost always to be found "desert scene" (169), "The Arrival at the Well." Mr. E. H. Wehnert sends a very powerful drawing of "Fra Filippo Lippi and Lucrezia Buti" (301), and a pretty conceit entitled "Pleasant Reflections" (92), an instance of "glass medium" being used, with no thanks due to Mr. Miller. Mr. Absolon, after his romp "Kiss in the Ring, Hampstead Heath" (191),—wherein the lasses and the lads are skipping like frolicsome lambs, volunteers and all, though not of Lord Ranelagh's flock,—thinking a caution necessary, dimly points out the unhappy consequences of some such interchange of civilities, in his very ambiguous but clever picture of a prostrate young lady by whom he admonishes—in the strongest language his dexterous pencil is capable of—"When Sorrow sleepeth, wake it not" (263). But, "Goodness gracious!" think of the heavy dews after such a day as that glowing orange-hued horizon reminds us of, and what a harbourage those graceful ferns, intertwined with weeds imbedded in luxuriant grass, afford to the cold slimy snails! So get up, silly little woman: forget your misfortune; and remember the earwigs, although you are the happiest of Mr. Absolon's unhappy creations, and it is a thousand pities to disturb you.

Mr. J. M. Jopling's Italian studies, his "Madre Col Bambino" (124), and very characteristic head of a girl, "O Sancta Madonna, ora pro me!" (178), are expressive of more than the mere manipulative skill so often the only recommendation of a similar class of subjects, and evince a marked improvement upon former productions.

Very great praise is due to Mr. Tidey for the unaffected grace with which he has composed his version of "The Saviour blessing little Children" (245). Even partial success in so exalted an undertaking entitle him to this; for, though failing to enforce the capabilities of so grand a theme for pictorial exhibition, what he has done towards it suggests that more was aimed at than has been attained; and a very commendable avoidance of exaggeration, perhaps, has induced too restricted a use of colour and effect, to the detriment of the design; so that much of its shortcoming may be attributable to a want of confidence on the part of the artist. Mr. Mole's pleasant combinations of rustic figures and landscape are as plentiful as ever; and Mr. Lee still strives to enlist the sympathies for his little episodes from ordinary realities at home with a painstaking enthusiasm, bordering on reverence, for simplicity.

Mrs. Murray's satire upon the fallibility of the Spanish priesthood acquires the more consequence from her presumptive authority in Spanish matters; and she leaves no doubt as to which of the "Rivals for Church Patronage" (145) will be the favoured one. There is so much vitality and appreciation of character in this, that the extraordinary dash of its execution is quite a secondary cause for surprise. Her sympathies seem monopolized by foreign interests, and Mrs. Murray is a proof of the extent to which custom and predilection assist in identifying the observer with the observed; she paints Spain like a Spaniard, whatever she may think of it.

All Mr. Carl Werner's works show the same conscientious attention to detail, and literal imitation of textures and effects as heretofore: his representation of "The Foundation Walls of the Temple of Solomon, the Wailing-place of the Jews" (88), displays all the qualities to be looked for in its treatment, although it might occur that more should have been done with the "wailers," if not less with the wall, to have made it more generally interesting. (269), "Entrance to the Church of the Holy Sepulchre, Jerusalem," and (276), "Waiting for Trial—Entrance to the Hall of Justice at Jerusalem; the Kadi just stepping in," are other capital presentments of Eastern fact.

Of the landscape delineators, Mr. Edmund Warren is again the most careful in elaboration, and the most exhaustive of his materials by the very completeness with which he finishes everything alike. Of his seven examples rivalling the camera's reflexions, a wonderful cornfield (40), to describe which he quotes from "Thomson's Seasons," is certainly the most noteworthy. Every ear of wheat in the foreground is separate and distinct, and a vast array of these photographic portraits of particular straws through which may be seen an undergrowth of as faithfully individualized flowering weeds—most refreshing to any eye but a farmer's,—lead far away over a perfect ocean of waving gold:—

> "Rent is the fleecy mantle of the sky:
> The clouds fly different, and the sullen sun
> By fits effulgent gilds th' illumined field;
> And black by fits the shadows sweep along,
> A gaily checker'd heart-expanding view,
> Far as the circling eye can shoot around
> Unbounded tossing in a flood of corn."

Mr. Warren, in his close application to nature, denotes the truth of this description as well as, on his own part, remarkable industry, and a most enviable ability to endure hot weather with a free hand, but not the less exact.

Mr. Bennett, equally untiring in his study of nature, takes a more comprehensive view of what he sees, and a readier means of expressing it. For facility and vigorous execution, all he does pronounces him almost singular, although Mr. Whymper contends that he shares with him some of this.

Mr. Reed produces also admirable results, but with more apparent labour, and a taint of indoor finish that deteriorates from their purity and truth.

It would entail the appropriation of far more space in our columns than we can spare, to give that due consideration of the peculiar claims that most of the items sustaining collectively the character of the exhibition are so decidedly deserving of. Landscapes predominate, interspersed with many a charming glimpse of sea and shore and dotted coast, and reminiscences to Continental visitors of quaint old buildings, to give variety. Messrs. Leitch, McKewan, Fahey, (the excellent secretary of the Institute); D'Egville, Maplestone, Pidgeon, Prout, Robins, Rowbotham, and Vacher, with the other members, are well assisted by their associates, amongst whom Mr. Deane, who, with Messrs. Hine and Shalders, forms a valuable acquisition; and Messrs. Penley, Mitchell, Philp, Richardson, and Sutcliffe to wit, claim recognition. Nor must the exquisite flowers of Mrs. Wm. Duffield and Mrs. Harris be overlooked, or the well-known handiwork of Mrs. Margetts and Mrs. Harrison.

CONVERSAZIONE OF THE ARCHITECTURAL ASSOCIATION.

THE annual *conversazione* of the Architectural Association was held on Friday, the 17th instant, at the House in Conduit-street.

It was attended by a considerable number of the members and their friends, including a fair proportion of ladies.

The chair was occupied by the president of the Association, Mr. Thomas Blashill.

The Chairman said that one of the principal objects for which the meeting was held was the presentation of prizes to those gentlemen who had competed for the two prizes offered this year, viz., Mr. Tite's prize of 5*l.*—3*l.* for the best design for a country mansion, and 2*l.* for the second best; and a prize of 1*l.* 10s. 6d., contributed by "A. B.," for the best line perspective sketch of a porch. For the first, he regretted to say, there had been but two competitors. The reason probably was, that the members of the Association who were likely to compete for the prizes worked very hard in the class of design, and they could scarcely be expected, under the circumstances, to compete on a subject which required so much time to be devoted to it.

Mr. T. Roger Smith having read the report of the judges appointed to examine the works sent in,—

The Chairman handed books, value 3*l.*, to Mr. T. Hardy, to whom the first prize for "design for a country mansion" was awarded; and to Mr. Edward Wimbridge, books value 2*l.* for the second best design. Mr. Wimbridge also obtained "A. B.'s" prize for the best line perspective sketch of a porch.

Some notices of motions and other business having been transacted,—

The Chairman said it often happened that there was no new matter of sufficient importance to occupy the attention of meetings like the present. Such occasions were devoted to conversation on desultory matters connected with the profession, especially as they had usually, as on the present occasion, an excellent exhibition of architectural drawings. This year, however, a new feature had arisen in the Architectural Association, and this was the first opportunity that had occurred for bringing it publicly before the members. It might be necessary to say that they had a considerable amount of success in the class for preparing members for elementary architectural examinations. For the last three or four years the matter had excited much interest, and at length the Institute of British Architects took it up with a great degree of energy. They consulted the Architectural Association, and listened to such suggestions as it made; and, when the scheme came down to them eventually, it was of such a nature that they very much approved of it. It was a subject of congratulation to them that the majority of the members who had passed that examination were members of the Architectural Association, and they had now the benefit of their experience and advice. He did not know that there was any matter so important as that to form the subject of discussion that evening, and he knew that there were several gentlemen present who had taken a great interest in the matter.

Professor Kerr having been called on, said he always considered it to be a very great honour to be asked to take part in any meeting of that Association. Amongst the many meetings which he was called on to attend in connexion with the architectural profession, there was none that he regarded with more interest than the meeting of the Architectural Association. He spoke without any desire to flatter, but because he thought there was something very refreshing in communicating with what he would always call the youthful mind. The Architectural Association was a junior institution, and however old and grave the members might become, he would always look upon them as young. There was, as he had said, great satisfaction in coming before the youthful mind, in the meeting of new faces, and in seeing the influx of new blood giving evidence of that prosperity which they all so much desire. He often had the pleasing task of complimenting the Architectural Association upon definite and distinct grounds, and he was happy that he was able to do so again. He need not recall to their recollection the exertions which the society had made to establish the Architectural Exhibition which surrounded them, and with which they had been so much pleased; nor need he tell them of the fact that the young men of the profession established the Architectural Association when nobody else would attempt it, that they paid the expenses when nobody else would contribute, and that as soon as it could walk alone they handed it over, without asking thanks, to those who were older than themselves. A statement of that sort could not be truthfully made of many institutions of the kind; and great credit was due to those who had accomplished the work. Within the last twelve months the Architectural Association had been able to render other services to the profession. The Royal Institute of British Architects having inaugurated a system of examinations that was practically a system of education, the members of this association had not only joined heartily in that movement but had furnished a majority of the members who had passed the examination. Having done so, he thought that they were entitled to a title, and that they ought henceforth to be called graduates of the Institute of British Architects. The fact of so many having passed the examination who were members of the Architectural Association showed the life and energy which pervaded it. In inaugurating a new association men of experience expected to calculate the results beforehand, and it had been so in this case. They had determined amongst themselves in the Institute that if one-half of the candidates passed the examination it would prove that it had been properly conducted, and that the preliminaries had been founded upon a true basis. Almost all the candidates were examined; three or four whose applications were informal were necessarily set aside, and some of them no doubt would have passed. There were about seventeen or eighteen examined altogether, and about one-half were successful. The calculations made, therefore, were verified by the event, and particular evidence was afforded that the institution of that examination was worthy of the support of those who had interested themselves in it. The Association was very much to be complimented for having furnished the majority of those who passed. They had had but a few months to prepare, but the gentlemen who were sent up proved themselves remarkably well qualified. Some of the answers, he was informed, were so highly creditable that they attained very nearly the entire number of marks awarded to the various subjects. The gentlemen who did not pass should not consider that any reflection was cast upon them by that fact. Somebody should go to the wall necessarily. If everybody passed it would be proof that the questions were not suited to the purposes required. Those who failed this year should only come better prepared next year. Failure one year was no discredit, but merely a business-like evidence of the necessity to try again. The Architectural Association had therefore, done good service to the public and to the profession by sending up young men who passed so creditably on so short a notice. He was glad to say that a class had been established to prepare for the coming examination. The Institute had behaved very handsomely and liberally in the matter of the examination, not only as regards money, but principally as regards the use of the library. The Institute deserved great credit for what it had done, and the Architectural Association also deserved the utmost credit for the manner in which it had met the examination as an established fact, and made the most of it.

Mr. Jennings said that he had taken a very active part with respect to the establishment of the examinations, having attended all the meetings which were held for the purpose of bringing it into operation. The result of the movement had been highly satisfactory to the profession generally; and it was of the utmost importance to young architects that it should be carried on. It was of great importance, too, that it should be conducted in such a manner as to give satisfaction to the younger members of the profession. They were, therefore, very anxious to have suggestions from every quarter on the subject, and principally from those who had passed the examination, or from those who contemplated going up. By that means they would be enabled to judge whether improvements might not be effected. It was in an educational point of view that the examinations were desirable. As to the circumstance of having passed giving a handle to the name as suggested, he did not think that that was desirable. Many men who did not pass an examination were very able men, and he would be extremely sorry that they should be placed at a disadvantage by not having obtained a diploma, which some persons were anxious to acquire. It was desirable that they should work together, both the older and younger members of the profession; and it was only by doing so, and by an absence of jealousy, that they were likely to succeed in obtaining the position which they all so much desired. He was happy to say that within the time since he became a member of the profession and the present, there was much less jealousy amongst the various members of it than there used to be. There was now much more of the feeling of desire that all should succeed, and that the success of one did not impede the success of another. If they all worked together in that spirit, he was satisfied that the architectural profession would attain that position in which they all wished to see it placed. He trusted the younger members of the profession, who were principally members of the Architectural Association, would feel that the older members, who were connected more particularly with the Institute, were most anxious for their success. The charter of the Institute was in some measure objectionable. At some future time it was probable that it might be so altered that they could all form one association. He considered that that would be an advantage. The older members might be more cautious and "slow." The young, on the other hand, were more liable to take up things hastily; and it was an advantage to have the activity and energy of the young combined with the mature wisdom and experience of the old. He was happy to see so great an improvement in the drawings exhibited this year, and the Association deserved great credit for the advance which had taken place.

The Chairman stated that the balloting for new members would take place at the next meeting.

THE SCINDE RAILWAY.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting, April 14, Mr. John R. M'Clean, V.P., in the chair, the paper read was "Description of the Line and Works of the Scinde Railway," by Mr. John Brunton.

The importance of the valley of the Indus, as the route for commercial as well as for military communication with the Punjaub and the north-west provinces of India, was pointed out by Sir Charles Napier, the conqueror of Scinde, so far back as the year 1842; and its many natural advantages subsequently attracted the notice of other eminent men. When, therefore, railways were introduced into India attention was soon drawn to the Indus valley route, having Kurrachee as its sea terminus; and a concession having been granted to Mr. W. P. Andrew, the Scinde railway company was formed in 1855. This company embraced under its management not only the Scinde railway proper, or the line from Kurrachee to Kotree on the Indus, 108 miles, but also the Punjaub line from Moultan to Lahore and Umritsir, 240 miles, and likewise a flotilla of steamboats for navigating the river from Kotree to Moultan, 570 miles. Within the last three months the Government had entrusted to the same company the construction of a line from Umritsir to Delhi, 280 miles, where a junction would be effected with the northern terminus of the East Indian Railway. The total length of these four sections was 1,198 miles, but the accounts of each section were kept perfectly distinct.

The construction of the first section of this line, from Kurrachee to Kotree, which had been graphically described as "the neck of the funnel" of the entire system, formed the subject of this communication. The works of the Scinde Railway were commenced on the 29th of April, 1858, their execution having been originally let to Messrs. James & Edwin Bray, contractors; but since June, 1859, the works had been executed departmentally, without the intervention of a large contractor, by the company's engineers and inspectors, who had thus favourable opportunities for becoming acquainted with the capabilities of the various classes of natives, as well as for ascertaining the cost of each description of work. This mode of carrying on the works was forced upon the company, by the peculiar exigencies of the case; but the author thought, that for the construction of large works in India, under Government guarantee, the employment of a substantial contractor was a preferable plan. To secure the economical execution of the works, a fair tariff of wages was published, and daily payments were guaranteed. This had the effect of collecting a considerable number of labourers. The province of Scinde contained but a sparse population, and the Scindee was naturally indolent and devoid of muscular power, though not deficient in talent. The natives of the neighbouring state of Cutch were a much superior race, and from thence came a large proportion of the skilled workmen, such as carpenters, masons, smiths, and other handicraftsmen. From the hill tribes of Beloochistan and Afghanistan a hardy race of

labourers was obtained. To maintain discipline amongst this body of men, it was found advisable to organize a regular railway police force; and to facilitate the administration of justice, a special magistrate was appointed by the Government. Owing to these precautions very few outrages of a serious character had occurred. As the line of railway lay at a distance from existing towns and villages, it became necessary to make such arrangements for the feeding, shelter, and health of the different *employés*, as policy no less than humanity suggested. The natives worked in gangs under a self-elected muccadum, or ganger, who made all agreements for work, received the earnings for division, and was himself paid a small per-centage by the men. When work was executed by day labour, it was found that its economical execution depended entirely upon the energy and honesty of the maccadum, or native overseer. These qualities were so rare, that piece-work had to be resorted to, though it was with difficulty this was established as a rule. The average prices paid for earth and rock work per cubic yard were, —alluvial earth excavated from side trenches and placed in embankment, 4·09 pence; firmly-set gravel, or soft shaly material, 4·9 pence; rock requiring bars, but not blasting, 1s. 9d.; and hard rock requiring blasting, the powder, drills, &c., being found by the company, 2s. Gravel ballast cost 1s., and broken stone ballast 1s. 10d. per cubic yard. The average prices of the principal kinds of work, including the cost of the provisional staff of superintendents, but exclusive of that of the permanent engineering staff, were as follows:—

	s.	d.	
Earthwork in embankments	0	11½	per cubic yard.
„ in cuttings, a large portion rock of different degrees of hardness	1	6½	„
„ „ in diversion of roads and streams.....	0	8½	„
Pitching slopes	2	0	per square yard.
Masonry, concrete	4	6	per cubic yard.
„ dry rubble	3	0	„
„ common rubble	12	0	„
„ coursed rubble, with rubble backing	15	0	„
„ coursed rubble.....	20	0	„
„ block in course.....	31	6	„
„ ashlar	1	7½	per cubic foot.
Ballast	1	6	per cubic yard.
Leading and laying permanent way.....	6	0	per lineal yard.
Fence walling	3	0	„

The distance between Kurrachee and Kotree traversed by the Scinde Railway was 108 miles 10 chains.

The permanent way consisted of the ordinary double-headed rail, fixed in chairs, laid on transverse wooden sleepers. A large proportion of the sleepers were of yellow pine, creosoted, sent from England. It was intended to complete the required quantity with sleepers of deodar timber, from the Himalayas; but the native merchant having been unable to fulfil the contract, a supply was purchased of Australian blue and white gum, and native red cyne sleepers. Their respective costs were, creosoted yellow pine, 8s. 11d., Australian blue gum, 8s., and cyne 7s. 9d. each, delivered in Kurrachee; that of deodar delivered in Kotree being 6s. each. The deodar sleepers were at first steeped in a solution of sulphate of copper, to protect them from the attacks of the white ant, but a Burnetizing apparatus has since been erected at Kotree, where the cost of applying the process only amounted to fivepence halfpenny per sleeper. The result of the author's experience was, that creosoted yellow pine sleepers split and twist to a great extent, owing to the extreme dryness of the climate, and that they become very brittle. To employ entirely European workmen would have involved enormous cost. It therefore became necessary to call in the aid of native carpenters and smiths as far as practicable. They first had to be induced to stand to their work, and then to be taught the use of European tools. This had been accomplished by degrees, and the result had been most satisfactory, the carriages now framed and erected at these shops by Cutch carpenters displaying admirable workmanship. To keep up a supply of European foremen, fitters, engine-erectors, and engine-drivers, the system of taking the sons of European soldiers and clerks as apprentices had been adopted, by which a staff of men thoroughly acclimatized was being educated in all branches of railway mechanism.

The extension of railway communications into wild and uncivilized countries demanded from all grades of the *employés* the exercise of more than ordinary observation, self-discipline, and energy. It would therefore be wise policy on the part of all foreign railway companies, and the contractors for the works, to be more strict than they had hitherto been, in ascertaining that the agents sent out from this country at great cost were something more than proficient in the practical details of their profession, as they ought also to be possessed of gentlemanly feelings and habits, by which alone the respect of the uncivilized native could be obtained and his services secured, so as to reduce the cost of the work, and convert the railway engineer into a pioneer of civilization and a missionary of science.

MONUMENT TO THE MEMORY OF BURKE AND WILLS, THE AUSTRALIAN TRAVELLERS.

At Melbourne, in the general cemetery, on the spot where these lamented travellers have been honourably buried, a massive monument will shortly be placed. It consists of a monolith, 12 feet high by 6 feet square at the base, and tapers to 5 feet square at the summit. This block alone weighs nearly thirty tons. Besides this there is a bold basement, on part of which are inscribed the names of the departed worthies, and which increase the whole height of the monument to from 18 to 20 feet. The monolith is from the quarry at Harcourt, on Mount Alexander, where stones of a much larger size can be readily obtained.

This memorial is likely to stand for centuries to come, when the wide land which Burke and Wills lost their lives in exploring, now so wild and solitary, shall have become covered with a great and prosperous population, governed by English laws and speaking with an English tongue.

THE MYSTERIES OF ESTIMATING.

ROADS AND DRAINAGE, WANSTEAD.

Correspondents have sent us an account of the various tenders made to the Conservative Land Society for the roads and drainage works on the Woodhouse Estate, Wanstead, and say they are very much astonished. They ask us, too, to explain. We are not surprised that they are astonished; but we cannot explain. All we can do is to give the list; and here it is:—

	£	s.	d.
Connell & Wilson	1,630	15	0
Wood	1,625	6	0
Baker	1,620	0	0
Betts	747	10	0
Kirk.....	648	9	3
Rivett.....	543	0	0
Parker	484	16	4
Johnson.....	468	0	0
Symes.....	460	0	0
Strickson	378	0	0
Horn	360	0	0
Rogers	325	0	0
Hartland & Bloomfield	311	0	0
Bull.....	307	0	0
Sharon	300	0	0
Cole, jun.	299	0	0
Potter.....	298	0	0
Newberry	296	8	6
Hayward	290	0	0
Portor & Pearson	263	11	0

The tender of Messrs. Portor & Pearson, of Lambeth, being the lowest, has been accepted.

DOINGS IN GLOUCESTER.

A correspondent from Gloucester, speaking of the works doing there, says,—First, are some excellent repairs in the very fine old cathedral here, and the unrivalled cloisters, matchless throughout Europe; secondly, a new bishop's palace, built in good taste; but still I think the repairs of the Prior's Lodgings are better still. It has been since the "Reformation" the residence of the deans, and forms part of the façade of the west front of the church. Never, even in the age of "adorning and beautifying," were so much pains taken to disfigure, and indeed make uncomfortable, a fine old piece of architecture. They have chipped off the stucco facing, or defacing, of the fronts of the building, and exposed under it the original Gothic windows, mouldings, &c. The Prior's chapel, with its curious and perfect tiled floor, the original Saxon entrance, and various other interesting objects are being daily brought to light. Only two days ago, in breaking into a fine spiral staircase unusually large, for it was the principal one in the residence, they came to a most interesting object, and probably unique. It was a *Gothic stone lantern* projecting from the wall, and in one of the divisions was actually the horn glazing, still perfect! I know not if there are more of them winding up the staircase; I shall see. I think drawings should be taken of some matters here. In one great room is some very curious panelling, covering all the walls of the room; and though this is of much later addition, being probably of James's time, still it is interesting, as it seems to me to be of unusual character.

You, of course, know of the Gothic monument erected in St. Mary's-square here in memory of Bishop Hooper, on the spot where he was burnt. In digging for the foundation of it they came to the stake to which he was tied! A friend of mine here, in digging the foundations for a gallery he is building, found the workmen, at 10 feet deep, bringing up quantities of Roman tesseræ. At first he did not notice it; but, on examination, he directed more care and attention, and has laid open a pavement 60 feet long, and it goes much further. In this case there is no pattern, but its great size is unusual. Gloucester was one of the great Roman stations, and various remains of pavement, urns, &c., have been frequently met with; and one villa, or palace, about 7 miles from hence, is superb. This latter is well known.

COMPETITIONS.

North Staffordshire Infirmary Competition.—Sir,—I should like to inquire, through the medium of your paper, what action the competitors intend taking in this matter? Is it usual, after receiving plans, to keep them an indefinite time, or to adjourn the question *sine die?* If it is usual, is it just, and is there no remedy?

A Competitor.

AUTO-TYPOGRAPHY.

From time immemorial, we dare say, or at least for the last half-century, boys have been in the habit of instructing one another in some curious processes which constitute the germs of more modern and elaborate discoveries. Amongst these we recollect of one whereby impressions of wax seals were struck off in lead by tapping the lead smartly with a hammer while a smooth surface of it was placed on the wax impression. Another consisted in the blacking of the prominent fibres of leaves and plants by rubbing them on a sheet of paper prepared with lamp-black (sometimes with other colours), and then transferring the impression to clean paper. The former of these two processes has recently sprung up into the curious and interesting art of auto-typography, as the latter has into the no less interesting and curious art of nature-printing.

A paper on the subject of auto-typography was read before the Society of Arts on the 15th of April, by Mr. George Wallis, who may fairly be said to have discovered the process, which was suggested by the nature-printing processes, but partakes more of the leaden seal process. He prepares a drawing on sheet gelatine, with a peculiar sort of ink, described in a patent which he has taken out, and containing various ingredients—such as gum arabic, peroxides of tin and manganese, Indian or Venetian red, &c.; the purpose being to form, in drawing on the gelatine, a raised surface, which is transferred to a soft metal plate, on which the drawing leaves its impression. The plate can then be worked from, with printer's ink, in the usual way, so as to produce *fac-similes* of the artist's drawing. That it may produce the more copies without being exhausted, it may be coated with steel by Mr. Joubert's process. Several plates can be successively stamped or struck off from the original drawing without much damage to the drawing itself. Mr. Wallis has invented a special press for taking the metallic impressions, in which the pressure is regulated to a nicety. The plates he uses are made of Britannia metal.

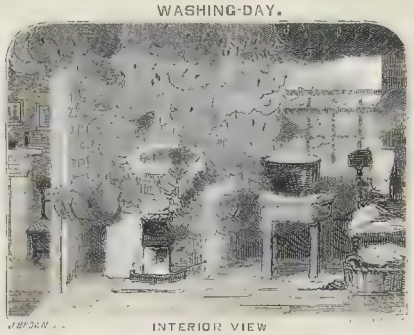
In the discussion which followed the reading of Mr. Wallis's paper a curious circumstance was mentioned by Mr. John Leighton. Mr. Wallis, he remarked, had successfully adapted the process to engrave even a wash of Indian ink, a thing he (Mr. Leighton) fully expected to find had been done before in Japan, as he had found that *the process of enlarging and reducing engravings*, introduced in that room a year or so back as a novelty, was already in existence there, as noted in Sir Rutherford Alcock's work, "The Capital of the Tycoon."

May it not have been from our Eastern great-grandfathers—the Chinese, Japanese, and other old fogies of creation—that those mysterious little ancients the boys originally derived their knowledge of seal engraving in lead, nature printing from leaves, and even photographing such leaves on paper made sensitive with nitrate of silver?

A NOTE ON WASHHOUSE CHIMNEYS.

BESIDES the prevention of smoke in washhouses,—a matter to which we would direct attention,—the arrangement of those places and their position in connexion with small houses require consideration. In many instances, when there is plenty of opportunity for managing otherwise, the washhouse is made to communicate directly with the living-rooms of the dwelling; and the consequence is that, even with closed doors, it is not easy to keep the smoke and steam from entering the various rooms. This should be avoided, the entrance of the washhouse being made as near as possible to the back-door of the dwelling.

In the washhouses which are attached to the smaller description of dwellings which have been erected during the last forty or fifty years, scarcely any care has been taken to ventilate them. In many instances the small windows are so constructed that they will not open, and there is no outlet except the door and the copper-hole. Even in new houses, and often in those of a good class, this matter has been much neglected. A simple and not very costly remedy for this want of ventilation would be to place a weather-boarded opening on the roof, constructed somewhat similarly to those which we often see on small country breweries.



Very often the washhouse chimney will not give forth smoke at all; but when it does, this is, especially in towns, a cause of much annoyance. The chimneys, being for the most part low, allow the smoke to blow into adjoining windows, to dirty the clothes which have been hung to dry, and do other mischief.

It is, however, more particularly of the construction of the copper stoves and flues which are constructed in many of these places that we would just now speak. In most instances they can only be cleaned by a complicated machine, and (if a chimney-sweep is called in) at the cost of half-a-crown. Some of these copper-stoves always smoke, notwithstanding that they are carefully and regularly swept. We have seen several which become so much congested by the firing needed for three or four days' washing, that no smoke can pass up at all, lodgments being made in a manner somewhat similar to that which takes place in the chambers of a lamp-black manufactory. The accompanying sketch is no exaggeration, and many a housewife in London and elsewhere will acknowledge the unpleasant faithfulness of the picture. One woman mentioned that she was obliged to lift the copper out entirely every third washing-day, and sometimes oftener, and clear the soot from an elbow of the flue, which could not be reached in any other way. Some have to blow up with gunpowder every morning of the washing-day. One woman commenced with a halfpenny-worth, which for a time partly answered a good purpose. This, however, at last failed, and a pennyworth was used; this was afterwards increased to three-halfpence-worth, and although this at each firing shook the house, it failed in the end to clear the flue. For three hours she said she had kept the fire alight, and that the water was not warm, and while she and the children were as black as sweeps, half suffocated, and shedding tears, the sparrows might be seen comfortably perched upon the chimney-pot outside. Driven by vexation and despair, this person sent to the oil-shop for a large quantity of gunpowder, and such was the effect of the measure, that the setting was blown down, and the copper and its contents fell upon the floor. Out of this evil there however came good, for fortunately a skilful man was sent to repair the mischief, and from that time the smoke in the washhouse ceased to be an annoyance, "showing," said this woman who had suffered so much, "that there is a way of properly managing these things."

There are scores of washhouses in which women labour in vain, endeavouring to wash clothes clean in a dense atmosphere of smoke. Instead of the fire acting properly, for the want of a clear draught, it comes out at the grate and openings of the door of the copper, and out at the door and window of the apartment. In some instances, the flues of these fireplaces are passed into a neighbouring chimney; but this has generally an unsatisfactory result, though to a certain extent it prevents the ill effects of the short chimneys to which we have referred. There can be no doubt that a great extent of reform is required in the construction of copper-flues and fireplaces; thousands of old ones need alteration; and care should be taken in connexion with new ones, that they may not be the means of creating the nuisance of which we complain. No one but those who have had the painful experience can tell the trial which a smoky washhouse brings to the temper, and how much it adds to the general unpleasing circumstances of the washing-day in the homes of a large number of the more affluent of the artizans, and also of many of the middle class. The children look with dread to those times, and the husband gets as far away as possible.

In houses which are inhabited by several families this evil is multiplied; for, supposing that there are four or five families in the house, and it is the custom for each to fix a washing-day, there are four days of smoke and steam instead of one; and this is a matter of consequence when the washhouse is within the dwelling. Here, then, we have an extensive nuisance which requires remedy. No doubt in many instances there are carelessness and want of attention on the part of tenants, but there are thousands of cases in which the greatest care would be unavailing, the original construction is so thoroughly bad.

WASHING-DAY.

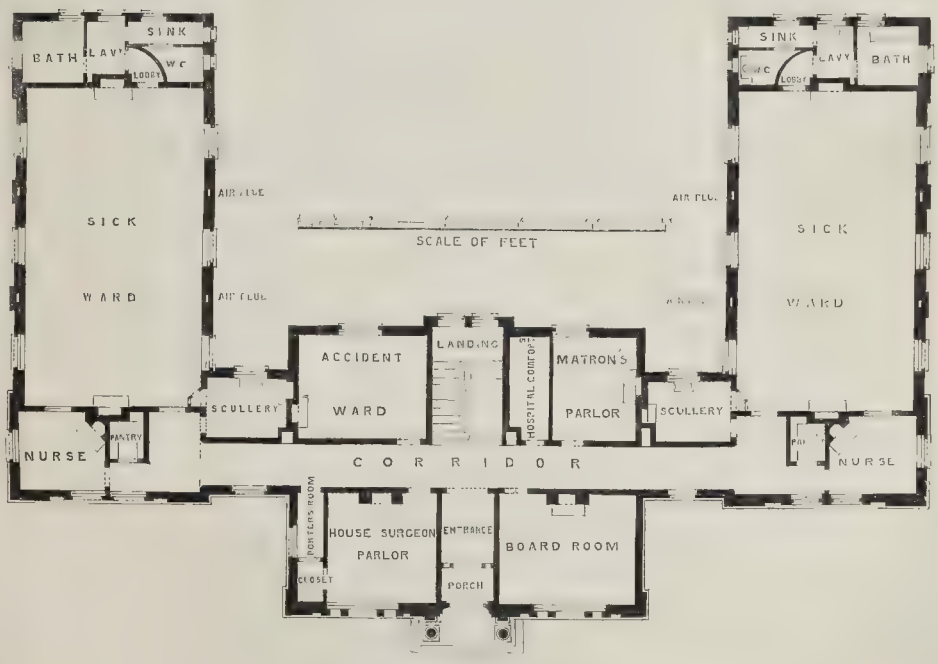
EXTERIOR VIEW

THE WASH-HOUSE CHIMNEY-POT.

THE NEW BIRKENHEAD BOROUGH HOSPITAL.



THE Birkenhead Borough Hospital now in progress is being erected at the sole expense of Mr. John Laird, M.P. It will supersede the present small house that has been used for years as a hospital in Hamilton-street, and which has been found totally inadequate to afford accommodation to the numerous cases of accident which are constantly occurring at the large works now developing themselves on the Cheshire side of the Mersey. The erection of the new hospital will involve an expenditure of about 5,000*l.*, exclusive of the land; and this sum Mr. Laird, in the most liberal and praiseworthy spirit, has placed at the disposal of the committee. The land on which the building will be erected is situate in Livingstone-street, close to the main entrance to the park, and it was purchased from the commissioners for 500*l.* The first stone was laid on the 24th of November last. Mr. Walter Scott, of that neighbourhood, is the architect; and Mr. John Hogarth the contractor for the works. We adopt the architect's own description of the building:—

The design is in the Italian style of architecture. The site selected is a piece of land fronting to Conway-street, which is 60 feet wide, and one of the principal streets in the town. It is bounded on the east and west by streets about 50 feet wide, drained by large sewers. The building will be two stories high in addition to the basement floor, and built of brick and Stourton stone, no cement being used. The aim in planning this hospital has been to embrace as much as possible the suggestions made at various times by authorities on the subject. The most essential points in constructing a hospital, they state to be—1st, fresh air; 2nd, light; 3rd, ample space; 4th, subdivision of sick in separate buildings. An inspection of the plans will show that these four essentials are obtained. The hospital is placed in a situation overlooking a public park of 180 acres, which must always be kept open, with a wide street intervening, and is also bounded by wide streets on each side. The axes of the wards are north and south. The wards have windows on both sides, one window for every two beds. There is also a window at the end of each ward, which, if necessary, can be opened at night for ventilation, without causing a draught upon the patients. The superficial area allowed for each bed is 110 feet, and the cubic space for each bed 1,430 feet. The subdivision of the sick is provided for, as the four wards will be in two wings of two stories each, exclusive of the basement. The nurses' rooms are at the entrance end of each ward, so that no one can enter or leave the ward without being seen, and by this arrangement they themselves are easily overlooked by the matron, and are able to have a complete supervision of the wards by means of windows between the rooms and the wards. There are waterclosets, baths, and lavatories for the patients at the end of each ward, quite isolated and thoroughly ventilated. There is also a scullery attached to each ward, and overlooking it. The arrangements in the plans are so made as to ensure a complete separation between the hospital proper and the administrative portion and offices. In addition to the four wards, the hospital will contain an operating-room, an accident ward, a board-room, matron's parlour and bedroom, house surgeon's parlour and bedroom, porters' room, female servants' room, kitchens and all usual offices, washhouse, laundry, store and linen rooms, fumigating room, rooms for hospital comforts, wine cellars, &c., and every requisite for such an establishment. There will be attached to the hospital a dispensary, completely separated from the remainder of the establishment, having separate access from the street. It will consist of a waiting-room for patients, consulting room, dispensing-room, and laboratory. There will be a garden or airing ground for patients, of good size, to the south, and overlooking the park. The building is so planned as easily to admit of such future extension of the wards as to double or treble the number of patients, the administrative portion of the hospital being such as to be easily adapted for a much larger number than now proposed. Lifts are provided for raising food, coals, &c., from the lower to the upper stories, and hot and cold water will be laid on in all the wards, sculleries, &c. The walls and ceilings of the four large wards, and those of the accident ward and operating-room, will be covered with Parian cement, which forms a polished and completely non-absorbent surface; and the floors of all the wards, and of the operating-room, the corridors, water-closets, bath-rooms, and lobbies, will be laid with oak, polished, to render them as non-absorbent as possible. The stairs will be of stone.

Birkenhead is indebted to Mr. Laird not alone for the munificence of the gift, but for the manner in which he has sought to obtain the best possible arrangements for the suffering poor.

THE WELSH OIL SPRING.—The paragraph which lately went the rounds of the papers relative to the discovery of a supposed oil well at Blains, Monmouthshire, requires a little explanation. The only spring, it now turns out, was a hogshead of oil, which sprang a leak some time since near the spot, and by some means a portion of the oil got into the well; hence the discovery of the supposed oil spring.

THE NEW BIRKENHEAD BOROUGH HOSPITAL.—Mr. Walter Scott, Architect.

HEALTH AND PUBLIC WORKS AT HOBART TOWN, TASMANIA.

It appears from the health reports prepared for the year 1862 by Dr. E. S. Hall, of Hobart Town, that the population of the island of Tasmania, or Van Diemen's Land, in 1862, was about 91,000; and that 1,367 deaths occurred, being a rate of mortality of 15 per 1,000, or the same as the healthiest registration-district in England and Wales, the rural and mountainous district of Glendale in Northumberland; but nearly one-third less than the rate for all England and Wales. In the rural districts of Tasmania, excluding Hobart City and Launceston and their environs, there were 545 deaths in a population estimated at 55,000 persons, or a death-rate of less than 10 per 1,000 per annum! While the rural-rate of England and Wales is about 19 per 1,000, or almost double that of this salubrious island. The small proportion of the deaths, under five years of age, of the whole, is remarkable. Nevertheless these deaths even, the reporter thinks, could be considerably reduced.

The only epidemic disease that prevailed in 1862 was whooping cough. We are indebted for these statistics and for the following to the *Hobart Town Mercury* (February, 1863).

The site for the new townhall of Hobart Town, facing on its four fronts Macquarie, Davey, Elizabeth, and Argyle streets, has now been cleared and levelled, and is ready for the commencement of building opérations as soon as the plans of the corporation and their architect are completed.

The work of levelling Franklin-square, also with a frontage on three sides, to Macquarie, Elizabeth, and Davey streets, is progressing rapidly, and the site will soon be ready for the reception of the monument to the distinguished navigator, who once lived on the very spot whilst Lieutenant-Governor of Tasmania.

On the wharf, the new Mariners' Church has so far approached completion that the roof is being laid on. It is a Gothic structure.

The finished portions of the new Catholic cathedral will soon be consecrated.

The corporation are erecting a commodious market for the exposure to sale of hay and other farm produce.

It is rather odd that there seems to be now in the colony a desire for a return of the convict system which once rendered Van Diemen's Land a terror to evil-doers.

ECCLESIOLOGICAL SOCIETY.

At a Committee Meeting held at Arklow House, on Thursday, March 26th, after some conversation about the proposed designs for stained glass and mosaics in St. Paul's Cathedral, and about the removal of the iron grills which used to separate the sanctuary from the aisles, it was agreed to request the president to communicate with the Restoration Committee. It was also agreed to co-operate, if possible, in the opposition to the proposed railway viaduct across Ludgate-hill. Numerous designs were laid before the committee. The president, Mr. Hope, submitted, from the British Consul at Stockholm, a design for an English church intended to be built in that city, from the designs of Mr. Hamilton. He also laid before the meeting Mr. Powell's sketch, from Messrs. Hardman, of a design for painted glass for the north transept window of Sydney cathedral. Mr. Lightly reported that the church used by the Dutch congregation in Austin Friars was too much damaged by the recent fire for possible preservation. It is intended to replace the ruin by a new Gothic church.

Claim was made for help in the restoration of the chancel of Bosham church (Sussex), on the following grounds:—

"The restoration of Bosham church commends itself to more than ordinary notice for the following reasons:—

1. It was built for the Saxons, and is one of the oldest churches in this part of England.
2. Its tower is the highest in England of Saxon origin.
3. Within the sacred edifice rest the mortal remains of a daughter of Canute.
4. In the opening scene of the Bayeux tapestry Harold (who, as well as Earl Godwin, occasionally resided at Bosham) is represented taking leave of Edward the Confessor at Winchester, on his journey from thence to Bosham; and then with an attendant entering Bosham church."

Messrs. Powell wrote as to glass mosaics lately manufactured by them:—

"The specimens we send are of two kinds, some of them being of a purely mosaic character, while others are a combination of mosaic and enamel, much in the same way as the two are combined in glass-painting; and this latter plan, we think, may be made very available for wall-decoration, as the colours are, of course, unchangeable by damp or atmospheric causes; and the lines and shading, being enamelled and burnt in, would have a durability scarcely to be attained by any other method of wall-painting; while the cost would be, as compared to mosaic work as ordinarily understood, very small indeed."

The committee thought the coarser mosaics very successful, both in colour and in substance; but a specimen of finer and more delicate work was, in their opinion, ineffective.

ON THE BIRTHPLACE OF CHAUCER.

At the last meeting of the London and Middlesex, and Surrey Archæological societies, Mr. W. H. Overall read a paper "On the Birthplace of Chaucer." He commenced by remarking that while the biographers of the poet believe him to have been born in the city, and to have been a member of one of the companies, yet none of them have hitherto been able to discover his residence. The first mention of his name occurs in a grant of Edward III., in 1367, of a pension to him of twenty marks. He also appears in 1374, as comptroller of the customs, which office he held to December, 1386. In 1384 he is found involved in trouble, through interfering in the election of John of Northampton for Lord Mayor of London. Northampton, however, did not succeed, and Chaucer was compelled for safety to go abroad. He returned in 1386 to London, and was sent by Thomas of Woodstock to the Tower, and deprived of his offices: to these, with a pension, he was afterwards restored by Richard II. In the "Liber Albus" mention is made of one of his residences, "Dimisio Portæ de Algate facta Galfrido Chaucer;" and in the "Liber Custumarum" there appears an account of a wardship being granted to him. Mr. Overall then brought before the notice of the meeting a copy of a manuscript dated 4 Richard II., being a transfer from Chaucer to Herbury of premises situate in the parish of St. Martin's in the Vintry, between the tenement of William the Gauger towards the east, and the tenement which formerly belonged to John le Mazelyners towards the west, and extending to the king's highway of Thames-street towards the south, as far as the water of Wallbroke towards the north, formerly the property of Chaucer's father, who is described as a vintner of London. It would appear from this deed that this spot was probably the father's residence, and there are good grounds for supposing that here Chaucer was born and lived. His father being a vintner, he was born free of that craft. These facts are somewhat strengthened by a passage in his "Book of Love," book i., sec. 5:—"Also the Citye of London, that is to me dere and swete, in which I was forth growen, and more kindely love have I to that place than to any other in yerth (earth), as every kindely creture hath full appetite to that place of his kindly engendrure, and to wilne reste and pece in that stede to abide."

NORTHERN ARCHITECTURAL ASSOCIATION.

At the quarterly meeting of this Association, held on the 15th instant, under the presidency of Mr. Thomas Austin, vice-president, the secretary (Mr. Oliver) read a communication from the Nottingham Architectural Association, having reference to the voluntary architectural examination and the granting of diplomas to architects at present in practice, upon which the Nottingham Association would be glad to exchange views on a matter which they regarded as being of great importance to the profession in general. After an animated conversation, it was moved by Mr. Greener, seconded by Mr. A. M. Dunn, that a copy of the resolutions previously passed by this Association be sent to the Nottingham Society, with an explanatory letter from the secretary.

A letter was read from Mr. F. R. N. Haswell, calling attention to the inaccuracy of the large or 25-inch scale ordnance maps, which made it an impossibility to join them together; as already pointed out in the *Builder*. A conversation ensued, but no action was taken in the matter. The conversation on the latter subject gave rise to another—namely, that of admitting civil engineers and surveyors as members of the Association, in favour of which the secretary gave notice of motion—for the alteration of the existing rule—at the next meeting. Mr. F. R. Wilson exhibited the three-panelled altar painting of the Ogle Shrine in Hexham Abbey Church; also an ancient wooden chest, surmised to have belonged to Brinkburn Priory. Mr. Wilson then read a paper upon Alnwick Castle in a state of siege, showing the various engines employed by the besiegers to capture such a castle, and the means taken by the besieged to frustrate their efforts, with the engines of war in full operation. As the meeting was separating, the secretary mentioned that, on the approaching visit of the British Association, the Association had arranged to take steps to bring together a collection of the building materials of the district.

EXTENSION OF THE HALIFAX WATER-WORKS.

The growing demands of the town of Halifax now require that the waterworks be further extended, and the branch in the Luddenden Valley commenced. Accordingly, steps have been taken to increase the supply. A ground survey is being made, and working plans are preparing, under the superintendence of Mr. Bateman, engineer, and the corporation will shortly be in a position to let the work to contractors. The Luddenden Valley scheme embraces the construction of four reservoirs. The largest, on Warley Moor, will be a compensation reservoir to the millowners down Luddenden Brook, and will have a capacity of 26,000,000 cubic feet. There will be three pure water reservoirs, calculated to retain together nearly 20,000,000 cubic feet. It is not intended, however, to carry out at present the whole of the works connected with the branch scheme in this valley, but simply the Warley Moor Compensation Reservoir, and the Castle Carr Reservoir. From these there will be conduits constructed, one involving the cutting of a tunnel through Mount Tabor, and terminating in Ramsden Wood Reservoir, in the Hebble Valley, from whence the water will be conveyed by the present arrangements to Halifax. By the works proposed in the first instance to be constructed, about 1,000,000 gallons per diem will come to Halifax; and when the whole works are completed it is computed that this valley will supply at least 2,000,000 gallons per day; making the supply to Halifax from the two valleys over 3,000,000 gallons. The scheme could be extended into the Hebden Valley, where an inexhaustible supply of good water could be obtained. Halifax is enviably situate in respect to water supply.

STATUES AND MONUMENTS.

Mr. J. S. Westmacott has finished, in marble, a statue of Alexander the Great, the attitude being suggested by a well-known passage from Dryden. It is intended for the Egyptian Hall of the London Mansion House. ——The excavations for the foundation of the Tynedale monument have been commenced on North Nibley Hill, near Wotton-under-Edge, under the superintendence of the architect, Mr. Jackson, of Uley. It is intended to lay the foundation-stone on Thursday in Whitsun week.—— A specimen of monumental architecture is described by the *Guardian* as having been prepared for the grave of the Rev. Mr. Eckitt, late President of the United Methodist Free Church, whose monument is to be erected in Finchley Cemetery, London. It is at present in the yard of Mr. Cockayne, of Nottingham. Standing 30 feet high, it is the largest monumental work made by Nottingham artists. The style is Geometrical. The base is square, ornamented on the middle of each face with a circle in relief, containing emblems of the Trinity. The central portion consists of four Gothic faces, with high-pitched gablets. At the corners are four sculptured figures, representing Faith, Hope, Charity, and Religion. Above the panels, filling up the spandrels of the gablets, are trifoliated ornaments, with the monogram J. H. S., a floral cross, as the emblem of the Trinity, and a descending dove, emblematic of the Spirit. The apices of the gablets are surmounted by finials of pomegranate leaves. From the shaft, which is allowed to appear behind the gablets, springs a light spire, supported by four columns, the shafts of which are of polished Aberdeen granite, and the bases and capitals carved. The spire is octagonal, the edges decorated with floral crockets, and the finial ontspread pomegranate leaves. The panels in the middle portion of the monument are of Aberdeen marble, and will contain inscriptions. The architect is Mr. R. C. Sutton, of Nottingham, and every portion of the work has been executed by Nottingham men; the carving having been done by Mr. Thomas Earp, and the stone-cutting by Mr. Cockayne, who is the contractor. Mr. Sutton's

plan for this monument was selected by the London Committee from among a large number of competitors; and the cost, according to the *Guardian*, including the carriage of the material from Yorkshire and Aberdeen, is only about one-half what it would have been in London.

CHURCH BUILDING NEWS.

Lowestoft.—The new Wesleyan chapel here has been opened. The edifice is situate about the centre of the High-street, and adjoins the old one, now to be used as class and school-rooms. The new chapel is in the form of a parallelogram, 70 feet long, 60 feet wide, and 50 feet high. The style of architecture adopted is Italian, and the materials employed, are white brick facings with Caen stone dressings. The East front (the principal) is divided into three heights: the lower part consists of a colonnade, having Portland stone columns of the Doric order with entablature over: the upper part is broken into three divisions, having four circular-headed windows, with panelled piers and carved stone capitals, the foliage of which consists of flowers emblematic of the Christian faith. The spandrils above have circular panels with carved foliage, presented by the architect. The centre division of the front is surmounted by a pediment of Bath stone; and a large semicircular window, with moulded key-stone, completes the principal features of this front. The interior is divided into nave and aisles by two rows of iron columns, with galleries round the three sides. The ceiling of the nave is semicircular, with arched openings at the sides, springing from the columns. There are twenty side windows and two large semicircular windows, one at each end, and the two latter ventilate the whole chapel. The total accommodation is for 1,250, and the total cost was about 2,500*l.* The whole has been executed from the design and under the superintendence of Mr. John L. Clemence, of Lowestoft, architect. The moulding of the enriched capitals inside and the carved stone capitals in front were executed by Mr. James Tolmie, of Lambeth. The contractors for the different works were as follows:—Bricklayer, plasterer, and slater, Mr. G. Rix; carpenters and joiners, Messrs. Butcher & Bly; mason, Mr. Utting; plumber, painter, glazier, and gas-fitter, Mr. J. W. Ling; ironfounder, Mr. Skoyles.

Lavenham (Suffolk).—The opinion of Mr. F. C. Penrose, architect, having been obtained, under his advice the nave and aisle-roofs of Lavenham church have been overlaid with new planking, and wholly re-leaded, and the seventeenth century ceiling of the chancel replaced by a roof of open timberwork—to be lined and painted at some future day—accordant in style with the decorated work of the windows. In repairing the roof of the nave, it was found necessary to carry the principals on iron shoes bolted to the wall-plates, their ends having decayed away. The refitting of the chancel is complete: the oak stalls with folding seats, and the benches with carved poppy-heads and elbows, have been restored; the floor paved with encaustic tiles; new mullions inserted in the windows; and a painted east window by Lavers & Barraud, of London, inserted by the Rector. Two other painted windows, one at the west end, where it is visible through the archway by which the tower has been thrown open to the nave, the other on the south side of the chancel, have been inserted by Messrs. W. & F. Thompson, brothers-in-law of the Rector. The west window was among the examples of this department of art in the International Exhibition last year. The rest of the church has been freed from the encrustations of whitewash and colour which filled up and concealed its moulded pillars and carved panel-work, and the stone-work has been repaired. The square pews have been so far cut down, that the church no longer appears empty when the congregation are seated, but their entire removal and the substitution of benches is obviously the next step to be taken. The restoration has been carried out under the direction of Mr. Penrose; Mr. Ringham, of Ipswich, executing the greater part of the wood-work; Messrs. Keogh, of Sudbury, the stone-work. The roofs of the aisles were constructed by Mr. Garrard, of Lavenham; and the lead work and glazing by Mr. Clemence, of Lavenham, and Messrs. Morley & Co., of Bury St. Edmund's.

Bures (Suffolk).—The church at Bures has been repaired and restored at a cost of about 2,000*l.* The west gallery has been removed and the tower arch opened, throwing the whole space of the tower into the church, thus enlarging the accommodation and extending the view. A floor for the ringers has been put in above the remains of an old groined ceiling in the tower. All the high pews have been removed, the floor cleaned throughout the building, and the entire under-surface covered with concrete 6 inches thick. The aisles and open spaces have been paved with Peake's tiles, and the church has been fitted up with open benches. The arcade on the south side of the nave has been rebuilt, consequent upon one column having sunk nearly 10 inches below its original level. New clerestory windows have been put on each side of the nave, and a new large window at the west end of the north aisle. New arches and piers have been put into the north and south aisles to prevent the spreading of the chancel arch. One of the five Perpendicular windows in the Waldegrave chapel, which was much injured, has been taken out, restored, and reinserted. A new gallery to seat 60 persons has been erected in this chapel: the old roof, which was much decayed, has been removed, and a new one erected and covered with lead externally, corresponding in pattern and style with the old. The church has been replastered throughout, finished with stucco, and the stone work of the arches, pillars, font, &c., cleared of paint and colour. The external walls have been stripped of the old plastering which hid the flint work, and the walls have been pointed in black mortar. The brick porch on the south side has also been cleaned and restored. The altar-rail has been refixed upon stone steps, and the sacrarium will be laid with ornamental tiles. The church has been heated with hot-water pipes, laid in each aisle for that purpose, and covered with open iron gratings. The architect was Mr. E. Christian, of London. All the works have been executed by Messrs. Rayner & Runnacles, of Halstead. The church will now seat 818 persons, 597 free. A new organ has been provided, built by Messrs. Bevington & Sons, of Soho. The total number of pipes is 557.

Hatton-wall.—The new Roman Catholic church which has for some time past been in course of erection in Hatton-wall has just been consecrated.

Whitley.—It has been determined to erect an organ in Christ Church, at Whitley: the cost will be about 300*l.* In the aisle of the new church a decorated window of two lights has been filled with stained glass by Messrs. Heaton, Butler, & Bayne, of Hampstead-road. The glass is given "to the glory of God by the Sunday scholars and teachers of St. Giles's Schools." The subject in the right compartment is Christ blessing little children. The left compartment represents the Good Shepherd bearing the Pastoral Staff, the emblem of the Episcopal Office. The trefoiled head of the window is filled in with a representation of the Agnus Dei. The window was paid for by the subscriptions of the humbler classes, and it is hoped that a wealthier class of churchmen will ere long provide the means for filling in some of the windows in the chancel or those on the south side of the nave.

Minster (Thanet).—The works at St. Mary's church are now drawing slowly to a close, but the opening has not yet been fixed. A stained-glass window (the most westerly one of the three in the south aisle), has been given by a friend as a thank-offering to God on the restoration of the ancient edifice. It contains an illustration of the Baptism of Christ and other emblems of the faith.

Crediton.—The foundation stone of a new Congregational chapel was laid at Crediton, on the 8th instant. The structure is erected from drawings by Mr. Thomas Oliver, Newcastle-on-Tyne, based on a design which received the approval of the Chapel Building Society some years ago. The contractors are Mr. Heathman, for the carpenter's and smith's work; Mr. Francis Channon, for the mason and plasterer's work; and Messrs. Hall & Thomas, for the painting and glazing, all of Crediton.

STAINED GLASS.

Howden Church.—The stained glass in the great west window of Howden Church is being fixed by M. Athron, of Doncaster, stonemason. The artist is M. Capronnier, of Brussels. The window is Geometrical, of Edward II.'s time. It is divided into four lights by mullions, and into two divisions by transoms. The subject in the lower division is the worship of the Magi. The upper division contains the angel appearing to the shepherds; and the tracery is filled with angels floating lightly, as if in the clouds, and bearing scrolls containing the words, "Peace on earth, good-will towards men." The window has been placed in the church by Mr. Scholfield, of Sandhall, as a memorial of his late father and mother.

SCHOOL-BUILDING NEWS.

Liverpool.—The premises for accommodating the Old Church schools have been rebuilt and re-opened, in the presence of the mayor. The value of ground in the neighbourhood of Moorfields rendered necessary an outlay of 1,100*l.* for the purchase of the additional site, and the cost of the re-erection was about 2,700*l.* In opening the schools it was stated that there is a scheme in contemplation for forming an institution similar to that organized in London for providing education and amusement for working lads between the ages of fourteen and eighteen, called the Youths' Club and Institute. Whilst classes are going on in one room, a library, newspapers, chess, and other amusements are to be found in another.

METROPOLITAN UNDERGROUND RAILWAYS.

A QUESTION appears to me to arise in connexion with these projects applying for Parliamentary sanction, viz.,—Whether Parliament have the power to alienate a man's private property without compensation?

With regard to the telegraphic companies the legal maxim is at once admitted, "*Cujus est solum ejus est usque ad cœlum;*" and a man may put two or three stories on his house. But is not the converse of the proposition "*Cujus est solum ejus est usque ad infernum*" equally true? and may he not add two or three basements,—in fact, "sink a well," if he be so minded?

The Metropolitan Railway was for the most part under a public road or way, and cases have scarcely arisen; but in the multitudinous projects afloat several legal considerations may arise.

LEX.

WANTED, A MEETING-ROOM.

SIR,—The George and Blue Boar Hotel is about to be taken down. The societies of decent artisans meeting there are again adrift to seek in vain for a house with rooms spacious enough for their accommodation. There are societies of enormous numbers in this metropolis, but rooms to accommodate them to the extent of two or three hundred nowhere exist in connexion with the existing taverns. Foresters, Old Friends, and others, are enormously augmented, but their meeting-places are as contracted in dimensions as ever. In our own case, the Bookbinders' Society, we want at this moment a room for an annual festival meeting, hitherto held at the above house, also for monthly meetings. The Freemasons offer us either of their halls, one for 10*l.* 10*s.*, the other for 5*l.* 5*s.* for a single night: this, therefore, will not suit. Doubtless lecture-halls and school-rooms on the temperance principle may be found in out-of-the-way places, but nowhere in suitable places have we rooms for large assemblies of working men or women upon the *social* system which they are accustomed to.

Now, sir, I venture to think that the construction of some such place, to accommodate seated 250, in Holborn or its vicinity, would pay, and, at the same time, help to elevate the working classes from their grovelling tendency to herd together in the low mere public-houses of insufficient space for the observance of the proprieties.

C. DENT.

THE CROMWELL FOUNTAIN AT THE CRYSTAL PALACE.

A PROTEST.

THE Crystal Palace at Sydenham may justly be regarded as a School of Art; furnishing, as it does, examples of every style in architecture, and casts from the best works in sculpture extant. Of late years, too, lectures have been given on art by persons distinguished for their learning and proficiency.

With all these efforts to advance the public taste, and give a deserved reputation to the Palace at Sydenham, it was to be hoped that the directors themselves might benefit by the teaching thus provided. It would seem that they are resolved to convince the world to the contrary. The figures which are now in course of erection, over a proposed fountain, placed in the centre of the grand terrace facing the building, and towards the garden, are so contrary to the fundamental principles of design in architectural ornamentation, and in sculpture; considered in reference to purpose, arrangement, form, and meaning; that it appears as if, with so many examples of good taste about the building, the directors had resolved, in

this conspicuous situation, to set up, by way of contrast, one exhibiting every fault that should be avoided.

In architecture it is a rule that no mere ornamentation should destroy or injure the effect of the main lines; that all decoration should be appropriate, and appear as a part of the design, as belonging to it constructively; or, if superadded, as something the absence of which would be felt as a want. In sculpture, whether figures be taken singly or in groups, there are certain essentials which an artist ought always to attend to. For instance, the figures must express what they are meant for; they must be appropriate to the purpose intended; they must be designed with a respectful attention to the canons of art,—the grammar, so to speak, derived from the best works of antiquity and of the revival; the laws of stability must not be neglected; it should be obvious that figures can retain the position in which they are placed; form must be attended to, and proportion; and, when any imitation of some well-known example is attempted, it must not be a caricature of it.

There are few individuals to whom Nature has been so ungenerous as to deny them the capacity of attaining to a correct taste: in almost every case it is only necessary to familiarize the sight with the best examples, to become intimately acquainted with them; and as children acquire a language by hearing it spoken, so a correct judgment is formed of works of art by seeing them exhibited. There are, however, a few unfortunates who either will not or cannot learn; and the directors of the Crystal Palace, I am sorry to say, seem to belong to that forlorn class.

Before proceeding to illustrate the barbarisms recently committed at the Crystal Palace, a few words should be premised describing the general design, or what at present appears of it, the upper portion.

There is a narrow tomb-shaped pedestal, the cornice of which has a curve at each extremity, sharp and unsafe looking, showing how necessary it is to reflect when attempting to copy. On this two marine monsters, male and female, written on as "War" and "Peace," are meant to be reclining; and the liberal allowance of fish's tail which has been given to each is no doubt intended to act as a counterbalance to their bodies, which would nevertheless fall off if placed in such a position. The idea of these, and their unstable position, seem to be intended as a caricature on the noble works of Michelangelo in the Cappella de' Medici in S. Lorenzo at Florence, copies of which are in the Italian Court of the Palace. Standing up from between these monsters, on the top of the tomb, is a rather colossal figure of Oliver Cromwell, redundant in big breeches and boots, who points to War. These figures appear above the line of the terrace balustrade; and it seems as if, by intention, the Palace and its contents were placed under the protectorate of this clumsy figure. A substructure of brick, built up in front of the terrace and immediately against it, supports them.

All who are acquainted with palaces and terraces throughout Europe know that, for length and breadth, and general features, few, if any, terraces can compete with this. The intention shown to destroy the effect of this length and the grand perspective produced by the continuity of the lines without interruption, including also the level of the figures on the pedestals along the whole front, can only be regarded as a barbarism. Any attempt at decoration which does not form a part of the terrace and does not belong to it, deserves no better name. The figures that are placed on the substructures of brickwork and brought to overtop the terrace are an excrescence. But the barbarisms here committed against good taste in sculpture are still more conspicuous. Figures should not only express what they mean, but should also be characteristic of what they are intended for. Who ever saw figures of Peace and War with fishes' tails? Peace should be represented always in a graceful and dignified attitude, either as standing or sitting, not lolling on her elbows and thrown down as if she had fallen asleep, like the "Night" of Michelangelo. But, however placid, a figure should not be obviously unsafe; and Peace and War would fall off their ill-proportioned couches if not fastened on. These figures are also too bulky; and, though there is some benignity in the countenance of Peace, her companion, like Vice,—

> "Is of so frightful and distorted mien,
> That to be shunn'd needs only to be seen."

But these are the things which the directors of the Crystal Palace have set up in the most conspicuous place they could find for the admiration of visitors. What natural connexion there may be between a fountain of water and Oliver Cromwell is only known to the directors themselves. Ocean, Neptune, Britannia, or Peace, in a proper position, holding out the olive-branch to all nations, would have had a more obvious meaning. There can be no objection to a fountain being placed in this locality: it may even be made an ornamental feature, and appropriate; but there must be nothing of it seen above the line of the terrace balustrade; nothing to spoil the fine effect of that extended line; nothing to interrupt the magnificent view;—a fountain extending in breadth to cover the blank wall between the flights of steps by which we ascend to the Palace, but not exceeding in height the terrace line.

H. C. Barlow.

WIDE TENDERING AND BILLS OF QUANTITIES.

Sir,—Seeing in a late number a letter on this subject from a provincial contractor, in which the writer says,—"The quantities in question were provided by the architect," and "that he is aware that such a course is not in practice in London: "I beg to correct an error into which he has fallen.

There are now before me some quantities from a firm of London architects, prepared by themselves, and for which they charge 2 per cent. in addition to lithography and builder's copies of drawings, with a proviso that the quantities are to be accepted as correct after the contract is signed.

To illustrate the imperfect manner in which the quantities are prepared, the following, amongst numerous items, will be sufficient, and they will go far to account for the great discrepancy so often seen in the lists of tenders.

A Metropolitan Contractor.

*** It is unnecessary to print these. They include "one water-closet complete," and so on.

ST. THOMAS'S AND BETHLEHEM HOSPITALS.

A general Court of the Governors of St. Thomas's Hospital was held on Tuesday; Sir John Musgrove, president of the court, in the chair. The clerk read the minutes of the last meeting, and a report setting forth the plans and estimates, prepared by Mr. Currey, the surveyor of St. Thomas's Hospital, of a new building to substitute the present Bethlehem Hospital, in the event of the contemplated arrangements being carried out, and which was set down at a cost of 150,000*l.*, including the site.

Mr. Tite, M.P., recapitulated the proceedings of the committee, and said that the result of their negotiations with the authorities of Bethlehem Hospital was to the effect that they did not want the money from St. Thomas's Hospital; but said, "If you will find us a site and build us a hospital in the country we shall be willing to come to terms with you, but upon no other condition." As to obtaining a site, that was nothing in comparison with the difficulties that would afterwards arise. After having purchased the land they would have to build not only a hospital for Bethlehem, but also one for themselves, and it was impossible to come to any approximation as to what the ultimate expenditure would be. The building of the two hospitals and the Parliamentary expenses (for it would be necessary to obtain an Act of Parliament) would involve a cost of not less than 300,000*l.*

After some discussion, the following motion was passed *nem. con.*:—

"That the Grand Committee be empowered to continue the negotiations with the Governors of Bethlehem Hospital for obtaining the site of that hospital, and to submit proposals to that body either to build for them a new hospital in conformity with the plans and estimates prepared by Mr. Currey, the surveyor of this hospital, at a cost not exceeding 150,000*l.*, including the site, or to pay for the site and buildings of Bethlehem the sum of 150,000*l.*, subject to the approval of the Court of Chancery, and the sanction of Parliament and of this Court."

To knock down one sound and costly building in order to erect another on its site, and then to put up a third elsewhere in lieu of the first, certainly seems to common minds a very extravagant mode of proceeding.

COMPENSATION CASE, LIVERPOOL.

DIFFERENCES.

The London and North-Western Company are making a branch line from Edgehill to rejoin the main line at a place called Bird's Wood, in the parish of Aston, in Cheshire, by which means the direct London traffic will pass along the valley between Allerton on the east and Mossley Hill and Garston on the west, through Speke and Ditton; then across the Mersey a little west of Runcorn Gap Ferry, by a lofty and magnificent iron bridge; and so on through Aston to Bird's Wood, which is a mile and a quarter beyond Preston Brook, and seven miles south of Warrington. Amongst other lands required in carrying out this object, the Company have to purchase from Mr. Josias Booker three statute acres and 37 perches of agricultural land, being 15,639 square yards, forming part of his property, nearly equi-distant from the Allerton-road eastward, and the Garston high road westward. To ascertain the value of this land a reference was held, of which the *Liverpool Mercury* gives the following particulars:—Mr. Booker's claim will be gathered from the valuations of the following witnesses called on his behalf:—Mr. Thomas Wylie, the parish surveyor, estimated the value of the land, including compensation, but exclusive of a bridge, which was left to be built at the expense of the Company, at the sum of 4,192*l.* 4s. 9d.; Mr. Horner, architect, at 4,322*l.* 1s. 8d.; Mr. J. Hay, architect, at 4,061*l.* 9s.; Mr. John Cunningham, architect, at 4,445*l.* 12s.; Mr. Scourfield, builder, at 4,685*l.* 19s. 6d.; Mr. Owen Williams, at 3,976*l.* 4s. 3d.; Mr. John White, at 4,217*l.* 5s. It transpired incidentally, though not named in evidence, that Mr. Samuel Holme had been consulted by Mr. Booker, but was not called by that gentleman, and that Mr. Holme's valuation was about 2,000*l.* The following gentlemen were then called on behalf of the Company, Mr. Lloyd ridiculing the valuations which had been given for less than three acres and a quarter of mere agricultural land:—Mr. William Culshaw, architect, valued the land and compensation at the sum of 1,776*l.*; Mr. Gee, architect, 1,776*l.*; Mr. James A. Picton, 1,777*l.* 10s.; Mr. Henry White, of Warrington, 1,769*l.*; Mr. James Holme, 1,581*l.* 15s. 9d.; and in addition the Company to be at the expense of building a bridge. The award has now been made, and the referees have given Mr. Booker the sum of 2,188*l.*, being less than half the amount claimed; and instead of the Company building the bridge to connect the severed land, the cost of it, namely, 595*l.* is to be paid to him, he building the bridge to suit his own convenience. It has been stated, and we believe with accuracy, that the cost of this reference will be nearly 800*l.*, and that the charge will fall upon the railway company.

Books Received.

A Handy Book on Villa Architecture. By C. Wickes, Architect, author of "The Spires and Towers of Churches of England." Second series. London: Lockwood & Co. 1862.

This, the second series of Mr. Wickes's "Villa Architecture," already briefly noticed in our pages, contains five designs in as many styles, and ranging in cost from 1,479*l.* to 3,876*l.* No wise person would think of building a house from a ready-made plan in a book; but works of this kind enable those who desire to build to bring their ideas to a focus, and discriminate between what they do want and what they do not, and so to give useful instructions to their architect. Plan No. 2 is objectionable as allowing of no thorough draught through the house; and the passing of the stairs over the main entrance would have a mean effect. Some of the elevations are treated skilfully.

Things to be Remembered in Daily Life, with Personal Experiences and Recollections. By John Timbs, F.S.A. London: Kent & Co. 1863.

This is perhaps the most reflective of all Mr. Timbs's many useful books. Time and human life, including some of his own personal experiences, form the staple subjects of the volume. By focusing great truths from the Living and the Dead is sought to be exemplified the moral couplet;—

> "Honour and shame from no condition rise:
> Act well your part, there all the honour lies."

We have no doubt that as a companion volume to "Things not Generally Known," this of "Things to be remembered" will be as popularly received as its predecessor. The sketches of character which it contains have been drawn in great measure from our own time, so as to give the book a current interest, though historic gossip has not been altogether neglected. As a slight example or indication of the nature of these sketches, though in this case a very brief one, we may quote the following under the head of "Opportunity:"—

"Extraordinary instances have occurred of latent genius having been discovered by some lucky accident, and fostered to high position. Isaac Ware, the architect, and editor of 'Palladio,' was originally a chimney-

sweeper; and, when a boy, was seated one day in front of Whitehall Palace, upon the pavement, whereon he had drawn in chalk the elevation of a building. This attracted the notice of a gentleman in passing, and led him to inquire who had enabled out the building. The boy replied, it was his own work: the unknown patron then took the lad to the master-sweeper to whom he was apprenticed, purchased his indenture, and forthwith had little Ware educated. He rose to be one of the leading architects of his day: and among other edifices he built Chesterfield House, in South Audley-street, one of the handsomest mansions in the metropolis. Ware died in 1766; and, it is said, retained the stain of *soot* in his face to the day of his death."

We cordially recommend the book.

Miscellanea.

THE ARCHITECTURAL MUSEUM.—On Tuesday evening last the Dean of Ely delivered a lecture on the Ely Lantern. We postpone our report till next week.

ARCHÆOLOGICAL INSTITUTE.—At the next monthly meeting of members on Friday next (May 1), Professor Willis will deliver a lecture on the crypt and chapter-house of Worcester. The chair will be taken at four o'clock.

ROYAL ITALIAN OPERA.—Mdlle. Carlotta Patti, sister of one who has made her reputation amongst us, is a very charming and finished singer. A slight physical defect prevents her from taking part in lyrical drama; but, as a concert singer, she affords a new sensation. In *Gl' angui d' inferno*, from the "Zauber-flöte," and Eckert's Echo Song, she has delighted her audience. Mdlle. Fricci's *Norma*, in the face of a recollection which will not soon be effaced, is a satisfactory performance; Mdlle. Dottini, a good *Adelgisa*. "Gulielmo Tell" was to be performed for the first time this season on Thursday evening, introducing a new *Arnoldo*, Signor Caffieri, his first appearance in England.

MEMORIAL OF THE EXHIBITION OF 1851.—On Monday the Prince of Wales received a joint deputation, consisting of Sir W. Dilke, Bart., vice-president of the Royal Horticultural Society; Mr. W. Wilson Saunders, F.R.S., honorary secretary of the Royal Horticultural Society; Mr. Alderman Challis, chairman of the Memorial committee; and Mr. Godwin, honorary secretary of the Memorial committee, on the subject of the inauguration of the Memorial of the Exhibition of 1851, which has been erected in the garden of the Horticultural Society, and which will terminate with a bronze statue of the Prince Consort. His Royal Highness having heard certain statements that were made to him as to the day on which the Memorial was intended to have been uncovered —viz., 5th of June,—was pleased to change it to the 10th of June. The ceremony of uncovering the Memorial will be performed by his Royal Highness the Prince of Wales, and her Royal Highness the Princess of Wales and other members of the Royal Family will be present. Full details of the ceremonial will be immediately published. Meanwhile we may state that her Majesty's Ministers, Foreign Ambassadors, and other distinguished persons, will take part in it.

NORFOLK AND NORWICH ARCHÆOLOGICAL SOCIETY.—The annual meeting of the members of this society was held at the Guildhall, Norwich, the Hon. F. Walpole occupying the chair in the absence of the president, Sir J. P. Boileau. The report was read by the hon. secretary, the Rev. C. R. Manning, and adopted. It described the society as in a prosperous condition. Office bearers were then elected or re-elected. The Rev. Mr. Manning read a paper "On Wickhampton Church and Monument;" and Mr. L'Estrange one "On the Derivation of the Terms Hungate and Colegate." Mr. Fitch exhibited the register of Burnham Thorpe Church, containing the register of Lord Nelson's birth, with a note by his father recording the investiture of Nelson with the order of the Bath, his rear-admiralship, and creation as Lord Nelson of the Nile and of Burnham Thorpe. The chairman remarked that this note seemed to indicate that the Nelsons were then up in the world. It was somewhat remarkable that three great contemporaneous admirals had all been born in one small village in this county—the village of Cockthorpe—which hardly contained more than six houses. They were Sir Cloudesley Shovel, Sir Christopher Minns, and Sir James Narborough. It was remarkable that this small village and the village of Burnham Thorpe should have produced four such great men. As an instance of the enthusiasm excited by Nelson's victories, he mentioned that when Nelson went away after his last visit to Burnham Thorpe, he took as many as thirty-eight boys with him from that little village.

PRIVATE GASWORKS.—Messrs. Porter & Co., of Lincoln, gas-engineers, have received instructions from the Archbishop of York to erect gasworks and fittings at Bishopsthorpe Palace. The same firm are also engaged in the erection of gasworks at Chester County Asylum.

HESS OF MUNICH.—The death of Heinrich Von Hess is felt as a great loss to Munich. Every traveller in that pattern-book city will remember the mural decorations, especially in the Basilica of St. Boniface, and stained-glass windows, from his hand. He was scarcely sixty-five when he died.

THE LUDGATE-HILL VIADUCT.—It is, so far, satisfactory to know, from the secretary of the London, Chatham, and Dover Railway, who writes to the *Times*, that the company "are willing to construct such a bridge as will at once be an ornament to the City and at the same time facilitate the widening of Fleet-street, so that from the foot of Ludgate-hill, where the bridge crosses, a good view of St. Paul's may be obtained." It is to be hoped, however, that even still all necessity for constructing such a bridge across Ludgate-hill will be obviated.

CHESTER ARCHÆOLOGICAL SOCIETY.—At the last ordinary monthly meeting, held at the society's rooms, St. Peter's-churchyard, the mayor in the chair, Mr. R. B. Edmundson, of the stained-glass works, Manchester, delivered a lecture "On the Manufacture of Ancient and Modern Glass," tracing it from its presumed discovery as early as the days of Tubal Cain, and its manifest existence as an art in early Egyptian times, down to its later introduction into Rome, Venice, Bohemia, England, &c. Mr. Edmundson intends shortly to give another lecture on "Stained Glass, Ancient and Modern—what it was, what it is, and what it ought to be."

RENTED CHURCH SEATS FOR THE POOR, *versus* FREE ONES FOR THE RICH.—In laying the foundation-stone on Easter Tuesday of a new church at Cliftonville, Hove, the Bishop of Chichester shrewdly expressed his opinion that in places of fashionable resort like Brighton and Hove, there should be *no free seats at all*, but a large number at a mere nominal rent, by the payment of which the poor man should secure his sitting against the intrusion of his richer neighbour; also some sittings at a somewhat higher charge, suited to the circumstances of tradesmen and others in their position of life; and he added that it afforded him great gratification to learn that such was the system intended to be adopted in the new church.

STRIKE AMONGST THE LEICESTER BRICKMAKERS.—It appears that a general strike has taken place amongst this class of workpeople for an advance of wages and for a diminution in the hours of labour. Should the extra rate of remuneration be agreed upon, it is intended that the question of time should not be so much an object, as most of the men work on piece. The demand made is stated by the local *Advertiser* to be for an advance at the rate of threepence per thousand for making bricks; threepence per thousand for packing them up; and twopence per thousand from the mill or for grinding; in all eightpence. Besides the question of wages, one arises with regard to time. The hours of labour amongst brickmakers at present are from six in the morning until seven in the evening, and an effort is made to reduce the same one hour, making it from six to six. Two masters are said to have acceded to the demand.

ALBERT MIDDLE-CLASS SCHOOL AND COLLEGE, IPSWICH.—The thirteenth meeting of the executive committee was held at Ipswich on Monday last; present the Right Hon. the Earl of Stradbroke, chairman; Sir E. C. Kerrison, Bart., and various other gentlemen, including Mr. Peck, the architect. The building firms who had offered to contract were reported to be very satisfactory, and Mr. J. W. Lacy, of Norwich, was selected as presenting the lowest tender. Several were under the specified 10,000*l.* by a considerable sum. Sir E. Kerrison brought up the report of the sub-committee, who had conferred with Mr. Lucas. Some minor suggestions were made, and Mr. Lucas guaranteed that nothing additional would be required, the contemplated outlay covering everything. All the sand that was necessary for the undertaking had been placed at the disposal of the committee by Mr. Arcedeckne. The building sub-committee were empowered to obtain from the contractor the necessary guarantees, and to see generally to the progress of the negotiations. It was announced that the bricks would be ready in the second week in June.

THE WOLVERHAMPTON SEWERAGE SCHEME.—The town-council of Wolverhampton have resolved to carry out the scheme of their borough surveyor as modified by Mr. Curley, C.E., and to that end have authorized the application to the Home Secretary for his sanction to borrow 37,000*l.*, repayable by instalments in thirty years, for the purpose of carrying out the sewerage works.

THE SEWAGE QUESTION IN THE COMMONS.—Mr. Brady, in the Commons last week, called attention to the reports of the Royal Commission on the sewage of towns question, the results of which he characterized as by no means satisfactory, especially in having referred the matter to Mr. Lawes, himself extensively interested in manure as an article of commerce. Mr. Brady read largely from the reports. Mr. Cowper defended the commission and Mr. Lawes, and urged a continuance of the experiments in which he had been engaged at the instance of the commission. Other members took part in the discussion, which, however, led to no special result.

HOSPITAL OF ST. CROSS, WINCHESTER.—The fine old Norman church attached to this institution is in process of gradual restoration, as funds permit. Last week a new organ, built for the hospital by Walker, of Tottenham-court-road (cost 420*l.*), was opened by Mr. Hopkins, organist of the Temple Church. The Lord Bishop of Rochester preached, and at the conclusion of his sermon expressed an earnest hope that the new organ would give the *key-note* to larger and more extended restorations of this glorious old sanctuary,—a hope which was warmly responded to by the master (the Rev. L. M. Humbert), the trustees, the brethren, and other members of the congregation. The work is now standing still solely for want of funds.

WORKINGTON WET DOCK.—The foundation stone of the Workington dock was laid about two months since. The piling around the dock is now half finished. Another steam piler is about to be set going to complete the north and east walls, while the engine at present in work is employed in piling the entrance and basin. The masonry of the north wall has been entirely completed for a length of 200 feet. The west wall is being pushed on. Nearly the whole of the foundation courses are laid, and the wall is finished from the north-west angle of the dock for a distance of some 60 feet. It is expected, both by the engineers and contractors, that the whole of the masonry will be finished by the close of the autumn.

SANITARY STATE OF STOCKPORT.—We regret to learn from the *Stockport Advertiser* that scarlet fever has been raging as a plague in various parts of this borough and its suburbs for several weeks back. Stockport and Heaton Norris are still suffering from this insidious visitor. In Hazelgrove, scarlet fever prevails by the house row; and owing to the peculiarly limited accommodation in the dwellings, being generally speaking merely cottages, the disease has spread rapidly and fearfully amongst families and neighbours. The assistance of the guardians has been urgently solicited to provide a temporary asylum for the infected cases, none such being convenient in Hazel-grove; and eventually it was suggested that the Heaton Norris workhouse should be opened for their reception and treatment. The theory advanced on this occasion is that scarlet fever is atmospheric, and not miasmatic.

THE LEICESTERSHIRE ARCHITECTURAL SOCIETY At the usual bi-monthly meeting of this society, Mr. R. W. Johnson, architect, Melton Mowbray, exhibited, through Mr. North, elevations, ground-plan, and a perspective drawing of five labourers' cottages recently erected by him upon the estate of Mr. W. A. Pochin, in the parish of Rearsby, in this county. Mr. North exhibited an anastatic drawing, by Mr. Joseph Goddard, of the Blue Boar Inn, known as King Richard's House, formerly standing in Leicester, from architectural drawings and measurements made by Mr. Henry Goddard before its destruction in 1836. Mr. G. Kenton exhibited through the secretary a "Half-Guinea Ticket to admit one person to the Fifth Aërial Voyage of Mr. Blanchard's Air Balloon and Flying Boat, in which he will ascend with an American gentleman, 1784." Blanchard was rewarded by the King of France with a pension of 1,100 francs. The Rev. J. H. Hill read a genealogical paper upon the ancient family of Talbois. A lengthy consideration took place in committee relative to the autumn meeting and excursions of the society, when it was decided that Kibworth should be made the centre of the proceedings, and that Hinckley should not be visited this year.

North Riding Infirmary.—Preparations are being made for opening and admitting patients into the North Riding Infirmary. The structure, which is on the pavilion plan, from the designs of Mr. Thomas Oliver, has been erected to accommodate 60 patients, at a cost of from 5,000*l.* to 6,000*l.*

Sailors' Home, Well Street, London Docks.—At a meeting of the directors, on the 18th instant,—Captain the Hon. Francis Maude, R.N., in the chair,—the report of the building committee was read, and the plans presented and explained by the architect, Mr. E. L. Bracebridge. It was unanimously resolved that the plans under consideration be adopted. The cost (quite 10,000*l.*) required to achieve the undertaking will be much in excess of the funded property at the disposal of the directors; but the necessity and urgency of the measure are so great that they feel convinced the additional outlay will be fully compensated by the advantages accruing therefrom.

Ottoman Exhibition: Timber and Minerals. The *Levant Herald* says:—Under the category of "class 1," in the centre compartment, is a very good, though small, collection of samples of beech, pine, maple, oak, and other woods: the specimens of the latter from the district between Bronssa and Kutayiah are of a very superior description, and are of the highest importance in connexion with shipbuilding, as there is a large supply of timber of this excellent description in the country. The collection of specimens of minerals comprised in "class 3" is, considering the vast mineral wealth of the country, not only extremely limited, but totally inadequate to convey any correct idea of the mineralogy of the empire. The district round Trebizond, however, furnishes some fine specimens of copper, lead, and silver ores well worth examination. Several specimens of coal and iron also seem to have been well selected, but from the defective manner in which they are arranged, and the absence of any detailed description, they lose three-fourths of their proper interest to the spectator.

Steam Boiler Explosions.—At the last monthly meeting of the Association for the Prevention of Steam-boiler Explosions, held at Manchester,—Mr. William Fairbairn, president, in the chair,—Mr. Fletcher, chief engineer, presented his report, from which it appears that two explosions had occurred during the past month to boilers not under the inspection of this association, by which fifteen persons were killed and sixteen others injured; making a total of thirty-one. A serious oversight had been made in the design of one of the boilers,—the top end being hemispherical and the bottom flat. The other explosion is also attributed to mal-construction of the boiler.——A terrible explosion of boilers has since taken place in the west of Scotland, at the Mossend Iron Company's Works, adjoining the Holytown station of the Caledonian Railway, five connected boilers having exploded at once, whereby no fewer than seven persons have lost their lives, other seven have been less or more injured, and some thousands of pounds damage done to property. The cause is believed to have been the supply of water after neglect till the boilers were red hot; but the attendant himself was killed.

Metropolitan Police Returns.—A very useful and instructive series of tabular records of the "number of persons taken into custody by the metropolitan police, and the results, in the year 1862, with comparative statements from the year 1831 to 1862 inclusive," has been printed by the police authorities at Whitehall, for her Majesty's Stationery Office. Age, sex, offence, occupation, education, sentence, &c., are all tabulated in various ways for facility of reference. Thus in one table we have "The degree of instruction of the persons taken into custody" in 1862, which gives a return of 68,287 persons, of whom 45,317 were males and 22,970 females; and of whom 10,465 males and 7,209 females could neither read nor write; 32,027 males and 15,597 females could read only, or read and write imperfectly; 2,753 males and 163 females could read and write well; and 72 males and 1 female (!) had superior instruction. Another table, or series of tables rather, gives a "Return of the trade or occupation of the persons taken into custody during the year 1862;" showing that, of the 68,287 persons taken into custody 22,434 males and 20,599 females were of no occupation (other than theft, we presume); 10,801 males were labourers; 1,169 males and 103 females were shoemakers; 1,105 males were sailors; 1,057 males and 370 females were tailors; 791 males were carpenters; 718 males coach and cabmen; 598 males, painters; 570 females, laundresses; 400 males, smiths; and so on.

The Irish Institute of Architects.— The arrangements for re-organizing the Irish Institute are progressing. A general meeting was to be held on the 23rd inst. Mr. Charles Lanyon is named as president.

Worthing.—A new drinking-fountain is to be at once erected in the much-improved town of Worthing, where a pier has been built. This was much appreciated during the last year. A correspondent says:—The smell of sea-weed has been removed through the united action of the inhabitants and the Water Company.

Southgate's Fire-Escape.—A new patent portable fire escape has been invented by Mr. Southgate, builder, of Kensington Park. It is worked by a spiral spring which rapidly brings its burden to the ground, after which it ascends with a bound to the window to which it is fixed. Its weight is only eight pounds, thus enabling its possessor to have it in readiness for use wherever he may travel.

Cardigan Gas Works.—A special meeting of the directors of this company was held at the Guildhall, on the 3rd inst., to consider the report of Mr. Andrews, of Swansea, the civil engineer engaged by the company to examine the plans which had been sent in by the various contractors, who had proposed to complete the works. The Mayor, Mr. Thomas Davies, presided. It appeared from the report of Mr. Andrews, that the plans submitted by Messrs. Vickery were the best adapted for the town, but that these required alterations. The meeting determined that these plans should be sent back to them for the required amendments.

Public Works in Buenos Ayres.—The concession for the Rosario and Cordova Railway was, at the last advices, expected to be forthwith granted to Mr. Wheelwright, and would be accompanied by large land grants, which would make the enterprise one of the most important in South America. The question of the supply of water to the city of Buenos Ayres had likewise occupied attention, and the municipality have resolved to advertise for plans from English engineers, with a prize of about 400*l.* for the best, such plans to be sent in before the end of August next.

Glasgow Water Committee.—The ordinary monthly meeting of the Glasgow Water Committee has been held, the Lord Provost presiding. The quarterly report by Mr. Gale, on the state of the works, was read, from which it appeared the average quantity of water sent into the city during January, February, and March last, was 16,460,000 gallons a-day from the Loch Katrine works, and 3,330,000 gallons a-day from the Gorbals works; in all 19,790,000 gallons a-day; being 290,000 gallons a-day more than for the corresponding three months in 1862. The works at the lochs generally are in good repair, and standing well.

Public Works and Buildings.—The estimates to be voted for public works and buildings have been issued, 6,464*l.* are charged as so expended at the South Kensington Museum in the last year, for which the accounts are made up. The repairs and furniture of the British Embassy house at Pera, which cost 1,500*l.* in each of the last two years, are to cost 3,234*l.* this year. Among the items for works at home is one of 6,000*l.* for the lions "to be" executed and placed on the pedestals of the Nelson Column." For works within the Houses of Parliament four votes are to be taken. The first is a further vote of 1,300*l.* towards 9,000*l.* to be applied to wall painting by Mr. J. R. Herbert in the Peers' Robing-room, the subjects to be Scriptural illustrations of justice on earth, and its development in law and judgment. The subject on which the artist is now occupied is "Moses bringing down the Tables of the Law to the Israelites." Another vote is of 1,600*l.*, to complete the payment for two of the twelve white marble statues of British sovereigns, to be placed in the Royal Gallery, and to make part payment for two more, when the small models of them, about to be begun, shall have been approved. There are further votes, amounting to 600*l.*, for payments to Mr. C. W. Cope and Mr. E. M. Ward, for wall-paintings for the Peers' and the Commons' corridors: the subjects are illustrative of that great contest which commenced with the meeting of the Long Parliament and terminated in 1689. The vote for Kew Gardens is very nearly the same amount as last year. Sir W. J. Hooker reports that the number of visitors in 1862 was 550,132, the largest number in any year, and 70,062 more than in 1861—an increase mainly due to the influx of foreigners to the International Exhibition.

New Blackfriars Bridge.—The Committee have passed the Bill.

The Power of the Penny.—This power is strikingly exemplified in the flourishing condition of the Woodside-ferry at Birkenhead. During March, 1862, the receipts were 2,491*l.* 15s. 2d., and in 1863, 2,775*l.* 9s. 7d. From the 24th of April preceding to the 31st of March, ending 1862, the receipts were 32,837*l.* 11s. 9d.; and in 1863, 34,636*l.* 17s. 10d. During the same period, ending 1862, the expenditure was 21,800*l.*; and in 1863, 20,468*l.* odd, thus showing a profit of nearly 14,000*l.* per annum out of a penny ferry.

"Onslow Model Dwellings."—At the last meeting of the Society for Improving the Condition of the Labouring Classes, the secretary reported that, on the invitation of Mr. Freake, of South Kensington, he had accompanied him over the newly-erected "Onslow Model Dwellings," situate in the Fulham-road, Brompton. These dwellings are arranged in three blocks, and afford an aggregate accommodation for 108 families, viz.—61 dwellings of three rooms each, and forty-two dwellings of two rooms each. Contiguous thereto is a large hall, which it is proposed to have fitted up as a reading-room and coffee-room, for the use of the tenants. A washhouse and public bath are shortly to be added. A resident superintendent has been appointed, and Mr. Freake has adopted the "rules" and general arrangement of this Society for the government of the Homes. The cost of each "Home" has been 80*l.* The total outlay, including the land, has been 14,000*l.* Mr. Freake would be willing to dispose of the entire property for that sum, in order to engage in a similar undertaking in another locality.

Newspapers and Paper.—A contemporary gives the following facts on the subject of the Prince of Wales's marriage and the London newspapers:—On Monday, March 9th, the circulation of the *Times* was 135,000; the *Daily Telegraph*, 230,000; while the *Morning Star* and the *Standard* ran between 80,000 and 100,000 each. The day of the wedding was Tuesday, the 10th, and on Wednesday, the 11th, the circulation was sustained and increased. The *Illustrated London News*' orders were for 315,000, but only 200,000 could be executed. The value of the *Times*' edition amounts to 1,687*l.* 10s.; the *Daily Telegraph* to 958*l.* 6s. 8d.; the *Illustrated London News*, at 10d., to 8,333*l.* 6s. 8d. What may give more interest to the practical eye of the paper-maker is the subject of weight of these enormous quantities. The weight of the *Times*' issue on these days was 43,875lb.; the *Daily Telegraph*, 39,539lb.; and the *Illustrated London News*, 97,916lb. The market value of these quantities is something to refresh one in these dull times. Taking the quality of the *Times* at 5½d. per lb., we have the paper cost for each day, 1,005*l.* 9s. 4½d. Taking the price of the *Telegraph* at 4½d. per lb., we have the paper cost 782*l.* 10s. 10d. Taking the price of the *Illustrated London News* at 5½d. per lb., we have the amount of paper consumed in a single impression of these three papers equal to 2,243*l.* 18s. 2d.

James Watt a Photographer!—We give the following on the authority of the *Birmingham Post*:—"A distinguished chemist in London, writing a few days ago to a friend of his in Birmingham, says:—'The following extraordinary fact will interest and surprise you. Yesterday I was at the Patent Museum, and inspected some recent additions obtained from lumber in the possession of the Boulton family. I saw two copper plates, plated with silver by the old process. They had been carelessly kept, face to face, and are much scratched. *On one is a photographic image of the old house at Soho!* It has been ascertained that the house was altered at a certain date, and that the image in question is of the house before the alteration. This was produced by James Watt! There are also many paper photographs which were produced by J. W. Further, distinct evidence has been got to show that J. W. was engaged in photographic experiments, and that he took portraits. A letter was written to "the Lunar Society" by Sir William Beechy (or Beachy), the portrait painter, expressing a hope that the then photographers would not disclose their process lest the art of portrait painting should come to an end! There is much other collateral information on this curious subject which has been procured, and inquiries are being still prosecuted. The information is so startling as to seem almost incredible; yet it is true. Of course iodine could not have been used, as it was not then known.'" Chlorine, the analogue of iodine, however, might.

A ROMAN WALL IN THE TOWER.—For some time past a number of men have been employed at the Tower in making some alterations. A few days ago, in the course of the excavations which were being carried out for that purpose, near the ticket office, the navvies came against a wall, which is said to be of Roman construction, at a depth of above 12 feet from the surface. Upon further removing the soil the wall was discovered to be about 10 feet in thickness and of a semi-circular formation, being composed of chalk and Kentish rag.

INTERESTING TO UMBRELLA BORROWERS (WITHOUT LEAVE ASKED).—An American has invented a lock umbrella stand. The moment the umbrella drops to its place in the rack, the handle is by a single movement grasped and held firmly in the clutch of a lock which nothing but the key specially manufactured for the particular depository can loose. The key, which is practically a pawn-ticket for the article, is of less weight and no greater size than a nickel cent, and adds no perceptible weight to the vest pocket. The invention, says the *New York Times*, is at once ingenious and useful: its introduction into counting-rooms, hotels, offices, and halls, and other places of public and private resort, must become general.

A WET DOCK FOR JERSEY.—In the report issued by the Chamber of Commerce, it is stated that there is every reason to believe that the project for the construction of a wet dock at St. Helier's is about to be carried out. The cost of a wet dock, including a graving dock, is set down at 85,000*l.* The balance of money to the credit of the piers and harbours is, it appears, 20,500*l.* "The average annual receipts for harbour dues for the last five years," says the report, "have amounted to 7,000*l.*; which, after payment of the interest on the debt and meeting the ordinary expenses, leave a net balance of 4,000*l.* per annum. This, with a yearly subsidy of 5,000*l.* from the revenue, would be ample to meet the cost of the dock."

GAS.—The half-yearly report of the Sheffield United Gaslight Company announces a reduction of the price of gas from 3s. 9d. to 3s. 6d. per 1,000 cubic feet,—a reduction which also involves the payment of a dividend of 10 instead of 8 per cent. The report also announced a reduction of 4s. per lamp per year in the charge for public lamps, and proportionate reductions in the charges for meters. The chairman, in moving the adoption of the report, expressed his confidence that the company would be able to continue the reduced prices, and still pay the maximum dividend of 10 per cent. Ald. Holland congratulated the shareholders and gas consumers on the prosperity of the company, and the wise reductions, and hoped that increased prosperity would enable the company to make still further reductions at no distant period. Ald. Unwin explained that, at the present rate of consumption, the directors would have to draw upon their reserve fund of 16,000*l.* to the extent of nearly 4,000*l.* a year, to enable them to pay the maximum dividend. He, however, anticipated a gradual increase of income from increased consumption. The company was very prosperous, and it would be for the benefit both of the shareholders and the public to let it go quietly on. A dividend of 10 per cent. on the A, and 8 per cent on the B and other stock was then declared. This is something like intelligent management.——In a report which the Gas Committee of the Town Council of Wolverhampton has presented to that body it is said,—"The Company charge the corporation with a consumption of 18,000 cubic feet of gas for each annual lamp. This calculation is made on the basis of the original contract to supply five cubic feet per hour for 3,600 hours. For the lamps which are burned only eight months in the year, 14,000 cubic feet of gas is charged for 2,800 hours. A reference to the following towns will show that the charges paid for lighting the lamps are considerably less than Wolverhampton: for while in Wolverhampton the price paid is 3*l.* 12s. 6d., it is in Ashton-under-Lyne 1*l.* 4s. 1d.; Bath, 3*l.*; Birmingham, 3*l.* 10s.; Blackburn, 2*l.* 2s. 9d.; Bolton, 1*l.* 8s. 3d.; Bradford, 2*l.* 8s.; Bury, 1*l.* 8s. 2d.; Coventry, 2*l.* 10s.; Derby, 2*l.* 6s. 2d.; Oldham,* 1*l.* 15s.; Preston, 2*l.* 16s. 7d.; Rochdale,* 1*l.* 10s.; Salford, 2*l.* 0s. 2d.; Dudley, 3*l.*; Huddersfield,* 1*l.* 9s. 9d.; Leeds, 2*l.* 5s.; Macclesfield, 2*l.* 2s.; Manchester, 1*l.* 5s.; ditto, 1*l.* 15s.; ditto, 2*l.* 2s.; Sunderland, 2*l.* 15s. 6d.; Stockport, 3*l.*; Warrington, 2*l.* 14s."

* In the places marked thus * the pillars belong to the town, and the price does not include the charge for them.

BRITISH MUSEUM.—The number of visitors to the British Museum in 1862 amounted to 895,077, an increase of 253,191 over the number in 1861. The number of persons attending the reading-room was not quite so large in 1862 as in 1861. It averaged 419 a day, and each reader consulted on an average ten volumes in the day. The total number of articles received for the library in 1862, including broadsides and ballads, was 73,929.

DISCOVERIES.—The remains of the ground-floor of a Roman building have just been discovered at Lyons, in the direction of Fourvières. The part of the wall which is left standing is covered on one side with slate, and on the other with white marble. Some handsome mosaics have been extracted from the ruins.——The men employed in making cuttings for the railway from Cordova to Malaga have recently found, about half a league from the former place, a great number of columns and capitals of very superior execution. Antiquaries who have visited the spot suppose them to be the remains of one of the Moorish palaces which formerly existed in the neighbourhood of Cordova.

RAILWAY MATTERS.—In the House of Lords, Earl Granville had a select committee appointed to inquire whether any, and, if any, which of the schemes before Parliament for the construction of lines of railway within the limits of the metropolis could be proceeded with in the present session, without the risk of interfering with the future adoption of a comprehensive plan of metropolitan railway communication; and to consider what provision could be made for the securing such a comprehensive system with the greatest advantage to the public and the least inconvenience to the local arrangements of the metropolis. Referring to a question put by Lord Strathleden, his lordship said he considered it advisable that the Ludgate Station and Junction Railways Bill, as well as the various other Bills in connexion with metropolitan railways, should be referred to the select committee. The committee has since reported.——The traffic receipts of railways in the United Kingdom amounted for the week ending the 4th of April, on 10,633 miles, to 555,435*l.*, and for the corresponding week of last year, on 10,217 miles, to 489,280*l.*, showing an increase of 416 miles, and of 66,156*l.* in the receipts. The gross receipts on fourteen railways amounted in the aggregate, on 7,290 miles, to 438,667*l.*; and for the corresponding week of 1862, on 7,032 miles to 383,919*l.*; showing an increase of 258 miles, and of 54,748*l.* in the receipts.

FOUL AIR IN WELLS.—Cases of suffocation by foul air in wells are every now and then occurring, notwithstanding the well-known risk of such fatalities. Two men have just been killed in this way at Haynes, according to the *Bedford Times*; and a third nearly sacrificed his life in trying to rescue the other two, one of the latter of whom lost his life also in the vain endeavour to save the first. This is almost the sole history of every such case: two or three lives are thus generally lost in succession. It would be the means of saving many lives, were the press, on all such occasions, to make a point of reiterating how apt old wells are to contain foul and deadly air; how simply and easily the existence of foul air in wells can be ascertained by means of a lighted candle sent down by a string; human life being in imminent danger wherever air will not keep a candle burning well; and how readily the foul air, once ascertained to exist, can be pumped out by any water-pump or hydropult, just as if it were water itself, and allowed to flow away on the surface, though invisible. Carbonic acid gas, or foul air, is so heavy, and so like water in this respect, that it can be poured out of one vessel into another. Where no pumping apparatus can be had, quicklime will, in time, exhaust the foul air, or fix it in the lime, so as to render it safe to descend; care being first taken to test it by again lowering a lighted candle.

TENDERS.

New House, Leigh Park.—Mr. Deacon's tender was 11,900*l.*, not 11,743*l.*

TO CORRESPONDENTS.

Architecture of Palestine.—We have a letter from Mr. Wigley in reply to our correspondent of last week, but are forced to postpone it; with many others.

Transparencies.—A. Amateur wishes to be told the best method to cause the colours in transparent illuminations to assume a brilliant appearance; also the best colours for use. Further, if muslin be preferable to calico?

R. M. M. (we shall be glad to receive copies of Masons' Marks).—G. C. (thanks. We shall be glad to receive plan and further particulars).—J. W.—G. S.—G. W. T. O. (should have reached us earlier). W. H. S. (should have sent architect's name).—F. & Son (shall have attention).—A Finchley Architect (if drawings are sent to Editor they shall be looked to).—J. T. B. (go to School of Art).—F. S.—G. D.—W. P.—Mr. M.—M. D.—W. R. L. (we are obliged uniformly to decline pointing out books).—F. W.—J. R. S.—Justitia (next week).

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

Advertisements cannot be received for the current week's issue later than FIVE o'clock, p.m., *on Thursday.*

THE *Mechanics' Magazine* of September 5th, in its description of Benson's Great Clock, says: "Benson's great piece of clockwork is certainly a marvellous achievement in clock-making, both as regards the workmanship, and its capacity under difficult circumstances for time measuring." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bedroom, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's illustrated pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watchmaking, with descriptions and prices; it acts as a guide in the purchase of a clock or watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock. J. W. Benson, received a Prize Medal and honourable mention. 33, and 34, Ludgate-hill. Established 1749.—[Advt.]

And 23 and 24½ BILLITER STREET, LONDON, PATENTEES AND MANUFACTURERS OF ASPHALTIC ROOFING SHIP SHEATHING, BOILER AND INODOROUS FELTS.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union street, Borough, London; and of all respectable Ironmongers, Builders, &c.

HAY'S PATENT WATERPROOF GLUE and INDIA RUBBER VARNISH. To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Government Victualling Yard, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO General Agents, 19, London-street, London, E.C where specimens of its application can be seen.

BROKERS—Messrs Barry & Co. Birchin-lane.
SECRETARY (pro tem.)—Thomas Piper, esq.
TEMPORARY OFFICES—8, Parliament street, Westminster.

ABRIDGED PROSPECTUS.

The Patent Concrete Stone is made by consolidating particles either of sand, gravel, chalk, clay, or any like material by means of a chemical process both simple and inexpensive.

Blocks of stone of any size hard and durable as the best natural sandstones, cut moulded to any shape, however ornate, are produced in a few minutes at a price with which natural stone can nowhere compete. No fire is used in the manufacture, and consequently the strictest truth of outline is preserved.

It is adapted to every purpose, both constructive and decorative, to which stone is applied. The stone has been already largely employed upon the stations of the Metropolitan Railway, and on the London, Chatham, and Dover Railway, and elsewhere. Recent inspection proves that it hardens by exposure to the atmosphere, and is unimpaired by the daily action of tidal sea water during many months

A solid block, measuring 7 feet 9 inches, by 2 feet 2 inches by 2 feet, was used for the foundation of a steam engine at work in the International Exhibition, and for that block the prize medal was awarded.

This Company has made a very advantageous purchase of the patents for the manufacture of stone, and for the foundation of artificial stone, and a few of the factories and plant of the inventor, situate at Ipswich and Norwich, so that no time will be lost in commencing remunerative operations. Many applications for licenses have been received, and are now under consideration.

A copy of the Articles of Association can be seen, and prospectuses obtained at the Temporary Offices of the Company, or from the Brokers, to whom applications for shares are to be sent.

ACCIDENTS By ROAD, RIVER, or RAILWAY; Accidents in the Field, the Streets, or at Home, May be PROVIDED AGAINST by taking a POLICY of the RAILWAY PASSENGERS' ASSURANCE COMPANY, 64, CORNHILL, LONDON.

£140,000 have been already PAID as COMPENSATION for Accidents of all kinds,

In Seventy-five Fatal Cases, and 8,000 Cases of Personal Injury. Rates and further particulars may be obtained at the Railway Stations, of the Local Agents, or of the HEAD OFFICE, 64, CORNHILL, LONDON, E.C.

WILLIAM J. VIAN, Secretary.

Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, walnut, Spanish mahogany, &c. &c. They for internal painting ever seen, and entirely supersede paint for the interior woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing room, and the humblest cottage; also for church work, hackneys and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOOG, 3, Brunswick-place, City-road, E.C.; and at the Works, Ainslie, Bath. Price 5s. per gallon. Full orders will have best attention. Heads of families special notice The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, as any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.

N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post office order for 22s.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—This valuable FREEHOLD ESTATE (land now redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, sand can be dug on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years. For plans, &c. apply by post, pre-paid, to Mr TRIBE, Builder, Sutton, Surrey, S.

TO BE SOLD, the Unexpired LEASE of a very desirable Small COUNTRY RESIDENCE, known by the name of PORTREDDYN CASTLE, built within the last ten years; containing two entertaining rooms, six bedrooms, smoking room, and domestic offices complete; with about 100 ACRES of LAND, in good order and cultivation, suitable STOCK, and a few modern FARMING IMPLEMENTS. It is situated within eighteen miles of Carnarvon, and two miles of Portmadoc, to which harbour a sloop of 80 tons burden can be brought. The House, which is on an elevation, is built in the Tudor style, with a Watch Tower, and commands one of the most charming views in North Wales; is within four miles distance of Pont-aber-Glaslyn, and five miles from Bedgelert. The fair-sized Fishing River Glaslyn runs through the Farm.—Immediate possession may be had, and application to be made to Mr. THOMAS CHAPPEL, Burnley, Lancashire; or to Mr. ROBERT ROBERTS, Royal Bank-buildings, Liverpool

HEATHERHURST ESTATE, FRIMLEY, SURREY.—This Freehold Estate has been divided into LOTS suitable for the ERECTION of high class VILLA RESIDENCES, so much in demand in the neighbourhood It is on the road from Guildford to Frimley and Sandhurst, 3 miles from the camp at Aldershott, and within 2 miles of the Farnboro' Station, and only 53 minutes by rail from London. It commands a beautiful view through a vast extent of varied and picturesque country, and is in the most healthy district in England The soil is entirely gravelly. For plans and particulars apply to F. GOODCHILD, Esq Guildford; or to J. C. FAIN, Esq Solicitor, on the estate, and at York Town, Surrey.

TO BUILDERS, &c.—A PLOT of FREEHOLD BUILDING LAND for SALE, near the New Church Cottenham Park, Wimbledon; also a PLOT, adjoining the Dunsford Villas, fronting the Merton-road, Wandsworth, Surrey, containing nearly one acre each.—For plans, &c. apply to Mr. W. C. POOLE, 11, Great Smith-street, Westminster, S.W.

BUILDING LAND, MILE END.—TO BE LET on a BUILDING LEASE, a valuable PLOT of FREEHOLD LAND, situate in North-street, Mile end, suitable for the erection of either shops, dwelling-houses, or manufacturing premises It comprises an area of nearly two thirds of an acre, and has an extensive frontage.—For terms and other particulars apply to Mr. N & JOSEPH, Architect and Surveyor, 27a, Bucklersbury, Cheapside, E.C.

TO BE SOLD, extensive FREEHOLD PREMISES, situate near Prescot, in the county of Lancaster, constructed and well adapted for the manufacture of earthenware, sanitary pipes, terra cotta chimney-tops, bricks, and other articles Also the Plant (comprising steam engine, steam-presses, locksting dies), with utensils, &c all complete One half of the purchase money of the freehold and buildings may remain upon mortgage, if desired The property is well adapted for many purposes, having a plentiful supply of water, with a large reservoir thereon.—For further information, address Mr. DANIEL REA, Jun. 146, Myrtle street, Liverpool.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

NORWOOD.—Most eligible FREEHOLD LAND TO BE LET on building leases, facing the main road, suitable for the erection of detached villas. Money advanced.—Apply to Mr B. FLETCHER, Architect and Surveyor, 3, Bond court, Walbrook, E.C

TO BE LET or SOLD, close to both the Ash Stations, adjoining Aldershott Camp, a piece of GROUND, containing about 42 acres, well adapted for a public institution, or building purposes, enjoying an extensive view. It is well supplied with water, and has a considerable frontage on the high road from Ash to Guildford; part of it is a brick-field, with a good supply of brick earth Land can be had in the immediate neighbourhood.—For particulars, apply to Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington Butts, S.

BUILDING LAND TO BE LET on lease, situate in the best part of Norwood, within ten minutes' walk of the Crystal Palace, and immediately adjoining the Gipsy Hill Station The eligible building ground is suitable for detached or semi-detached villas, which are in great demand. Money can be advanced to builders if required, at moderate rates of interest.—For particulars, apply personally to Mr WILLIAM BACKHOUSE, Architect, 39, Southampton-buildings, Chancery-lane, W.C.

WANTED, in Hackney or Dalston, a PIECE of GROUND to build eight or ten small houses State terms and particulars to R A M. Office of "The Builder"

BUILDING LAND at OXFORD.—The difficulty which has heretofore existed of procuring suitable sites for building private residences in and around Oxford is now overcome. A very fine estate, known as "Norham Manor," comprising upwards of 30 acres, belonging to the President and Scholars of St. John's College, is now being laid out for the purpose and TO BE LET, on BUILDING LEASES, for a term of 99 years, at moderate ground-rents The land is situate within ten minutes' walk of the Colleges and public buildings in the city, while it possesses all the advantages of the country. The site is elevated, it has a subsoil of gravel, and a plentiful supply of pure spring water. Several lots have already been disposed of, and a few residences of a good character have been built. For particulars and terms of the land, apply to Messrs MORRELL, BIDDLE & RAWKINS, Solicitors; or to Mr. WILLIAM WILKINSON, Architect, Oxford.

WANTED, a SITE, Freehold or Long Leasehold, in a leading thoroughfare between Regent-street and Park-lane The area (about 150 feet by 30 feet) may be situated at back, but a frontage of 25 feet in the main street, and a separate entrance from a back or side street indispensable.—Address, with particulars, to Mr. ALFRED STRONG, 23, Lincoln's-inn-fields, W.C.

ROSSLYN PARK ESTATE, Hampstead. — A few Plots of LAND on the above Estate (within three minutes' walk of the Railway Station), commanding beautiful and extensive views towards Windsor and Highgate, can be had on BUILDING LEASES —For particulars, apply to Mr. N.T. BANDALL, Architect, 28, Great Winchester-street, City; or the Clerk of Works on the Estate.

FREEHOLD GROUND RENTS, CITY of LONDON.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 16th of JUNE next, at TWELVE o'clock precisely, to receive PROPOSALS for the PURCHASE of FREEHOLD GROUND RENTS, on Premises let on Building Leases, having about eighty years unexpired, and severally situate Nos. 70 and 71, Watling street; Nos. 76 and 77, Newgate-street; and No. 4, Maidenhead-court, Aldersgate-street; particulars and plans of which may be had at this office, together with the conditions of sale Tenders must be sealed, endorsed outside, "Tender for Ground Rent," and addressed to the undersigned at this Office, and must be delivered in before TWELVE o'clock at the said 16th of JUNE next. The Commissioners do not bind themselves to accept any Tender unless the same shall be deemed eligible. Parties tendering must attend personally or by an authorised agent on the day of treaty, and be then prepared (if their Tender be accepted) to pay the required deposit of 10 per cent and to execute an agreement for the completion of the purchase agreeably to the conditions of sale.
JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, April 20, 1863.

TO BE LET, at Newington Butts, Surrey, a MANUFACTORY, with Steam-engine (about 8-horse, high-pressure); also a small DWELLING-HOUSE, now in use for lead and colour grinding: will become vacant at Midsummer — May be seen, and terms known, on application to Mr BROWN, 6, High-street, Newington Butts, or at 4, Adam's-court, Old Broad-street, City.

VALUABLE BUILDING GROUND in Cresconi-place, on the South Side of Clapham Common, TO BE LET for a term of eighty years, subject to building restrictions. The specification may be seen at the Offices of Messrs. HAWKINS, BLOXSAM, & HAWKINS, No. 2, New Bowell-court, Carey street, Lincoln's-inn, to whom Tenders in writing, endorsed "Tender for Building Ground at Clapham," are to be sent on or before the 6th day of MAY next. The highest or any Tender will not necessarily be accepted

TO BE LET, on a Building Lease, at Chelsea a PIECE of GROUND, in a first-rate situation, calculated for the erection of a public house, for which it is suitable (being close to the New Barracks), and three shops About 212 feet frontage to the New Bridge-road, and about 22 feet to the main Queen's-road East.—For particulars inquire on the Premises; or at No. 194, Queen's road East.

EALING.—BUILDING LAND, within two minutes' walk of the Railway Station, known as Eaton Rise, TO BE LET for detached or semi-detached villas.—Apply to Mr. HANCOCK, Surveyor and Builder, Ealing green.

NEAR BRIGHTON.—FREEHOLD LAND TO BE LET or SOLD, for Building Villas, in a pleasant Village about three miles westward of Brighton, close to a railway station. Situation dry and healthy The land will be sold at a very moderate price, with easy terms of payment. Also to eligible and desirable WATERSIDE FRONTAGE TO BE LET, for Ship Building or Wharf —Apply to Mrs E HALL, Southwick, near Brighton; or to E. F. HALL, No. 3, St. Mildred's court, Poultry, London.

TO BUILDERS.—A PLOT of FREEHOLD GROUND, frontage 70 feet, and 204 deep, fit for a tavern and two good shops. Current price, for 99 years, water and gas laid on Two thirds of the money advanced.—Apply at 14, Upper Charles street, Northampton-square

FREEHOLD SITES at Poplar and Bromley, suitable for Factory Premises or Stabling, TO BE LET or SOLD; also FREEHOLD RESIDENCES in Grove-road, Row, near the principal entrance to the Park The houses contain ten rooms each, are well built and drained, and are close to direct omnibus route to the City.—Apply to JOHNSON & ARROWSMITH, Architects, 29, Great St. Helen's, E.C.

TO BRICKMAKERS and OTHERS.—LAND TO LET, for BRICKMAKING, near the Victoria Docks.—For particulars, address E. L. 40, Norfolk-street, Strand.

FREEHOLD LAND at SYDENHAM, about ten minutes' walk from the London and Brighton Railway-station.—TO BE LET, on Building Lease, a Piece of LAND, having a frontage to the road leading to Beckenham of about 430 feet, and a depth of about 370 feet. Land-tax redeemed.—Apply to Messrs. PATERSON & LONGMAN, Solicitors, 3, Winchester-buildings, Great Winchester street, London, E.C.

BUILDING LAND TO BE LET, for the erection of shops and houses on a main road, within ten minutes' walk of the Clapham road, Nine Elms Boat Pier, and Vauxhall Station, and within five minutes' walk of the new works of the South-Western Advances, if required.—Apply to H. BATES, The Priory, Wandsworth-road.

TO BE LET, a Capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situate at the foot of the New Westminster Bridge, and opposite the Houses of Parliament.
This Drawdock has been closed for some years, and is now about to be re-opened.
From its excellent situation and the probability of the Scotland Yard Works being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended upon
A Residence is attached, which may or may not be taken with the Wharf or Drawdock
Apply to Mr. W. HEWETT, 81, York-road, Lambeth.

BRICKS, YELLOW and PALE SECONDS, PAVIORS, STOCKS, GRISSELS, and PLACE, delivered by barge alongside to any part of the River Lea or Canals.—For particulars apply to

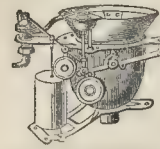
Apply to Messrs. CHAS. ISAACS & CO. Bathurst Cement Works, Bristol.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart, VENTNOR, ISLE of WIGHT—Second Testimonial.—"March 10th, 1852.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."



N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

ORIGINAL ANTI-CORROSION PAINT.

Patronised by

THE BRITISH GOVERNMENT, THE RUSSIAN GOVERNMENT, | H.R.H. THE PRINCE CONSORT, MOST OF THE NOBILITY & GENTRY, | RAILWAY & CANAL COMPANIES COLLIERIES, IRONMASTERS, &c

It is extensively used at home and abroad for all kinds of

OUT-DOOR WORK,

And has been proved, after a practical test of 70 years, to surpass any other Paint. It is applicable to WOODEN HOUSES, FARM and other OUTBUILDINGS, AGRICULTURAL IMPLEMENTS, MACHINES, CONSERVATORIES, PARK FENCING, GATES, &c., IRON ROOFING, BRIDGES, HURDLING, and every description of IRONWORK; while for

PUBLIC EDIFICES, MANSIONS, VILLA RESIDENCES,

And every kind of Brick, Stone, Compo, &c. it is unrivalled, presenting the appearance of fine cut stone.

The Anti-Corrosion is lower in price and lasts twice as long as the best White Lead.

The Anti-Corrosion is a Powder, sold in all colours, and will keep any length of time.

OIL, TURPENTINE, AND BRUSHES.

Prices, Patterns, and Testimonials sent upon application to

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimen at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks Lime, and Old Bricks. Dry rubbish delivered, per barge, in any quantity alongside the Thames.

YORKSHIRE STONE and GRANITES
of every description at lower prices than are offered by any other house in the trade, may be had at W. ASPINALL'S NORTH-WESTERN STONE WHARF, Camden Town; or in trucks, at the Great Northern, Midland, Camden Town, Kilburn, or Kensington Railway Stations.

1½ inch	SELF-FACED PAVING	.... at 2s. per 100 feet.

NOTICE OF REMOVAL.

GEORGE JENNINGS, HYDRAULIC AND SANITARY ENGINEER,

begs to inform ARCHITECTS, ENGINEERS, and OTHERS interested in SANITARY PROGRESS, that the London, Chatham, and Dover Railway Company have taken his Wharf and Factory, Holland-street, for their New Station at Blackfriars, and that his Works for the future will be carred on at

PALACE WHARF, STANGATE, LAMBETH,

opposite the River Front of the New Houses of Parliament.

The well-known character and great demand for all GEORGE JENNINGS'S Manufactures have rendered it unnecessary for him to advertise for the last two years; he, however, takes this opportunity to state that during that time he has added many Sanitary and Domestic Articles to those already before the public, some of which gained the Medal of 1851, and more recently the Exhibition Medal of 1862; the latter being awarded to him for "GENERAL Excellence of Articles exhibited and for Novelty of Application."

Jennings's Patent Tip-Up Lavatories, Water Closets, Urinals, and other sanitary appliances will be found in use on eighteen different Railways in England, on the East-Indian Lines, at many Stations, on the Paris, Orleans, and other Continental Railways.

GEORGE JENNINGS would call particular attention to his "EXHIBITION VALVE CLOSET and TRAP" (in one piece of earthenware); it is ENTIRELY FREE FROM ALL COMPLICATION; it saves the usually expensive Lead D Trap, Service Box, Cranks, and Wires; it is noiseless in action; and most durable and efficient.

JENNINGS'S PATENT TIP-UP LAVATORIES, in a sanitary point of view, are much to be preferred, as the contents, after use, are thrown direct from the basin, leaving no deposit, which is often the means of communicating disease.

GEORGE JENNINGS has also invented a TIP-UP CLOSET, which for Basements, Cottages, &c., will be found most suitable: they are sold complete, with seat, for 63s. each.

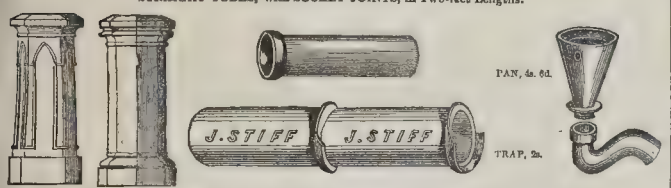
JENNINGS'S PATENT DRAIN-PIPES

Are the only DRAIN-PIPES that MECHANICALLY PERMIT EXAMINATION, or LEGALLY PERMIT THE INTRODUCTION OF SADDLE JUNCTIONS.

IN SPITE OF THE STRONGEST TRADE COMBINATION THAT EVER EXISTED, BAD COPIES OF HIS ORIGINAL INVENTION, AND DISCOUNT REACHING 50 PER CENT., the DEMAND for these PIPES is STEADILY INCREASING.

JENNINGS'S PATENT AIR CHAMBER SMOKE FLUES, TERRA-COTTA and STONEWARE AIR BRICKS, PUMPS for Shallow or Deep Wells, Sluice Valves for Steam, Water, or Gas, Fire Cocks, Hydrants, Shop Shutter Shoes, Family Jars, &c. are now in course of arrangement, at his New Sanitary Depôt, and he hopes, by continued attention to the requirements of the age, to deserve that large share of support he has hitherto been favoured with.

GEORGE JENNINGS, Sanitary Engineer, PALACE WHARF, STANGATE, LAMBETH, S.



JAMES STIFF & SONS,

MANUFACTURERS OF GLAZED STONEWARE DRAIN-PIPES, WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES; ALSO

IMPERISHABLE TERRA-COTTA CHIMNEY-TOPS, FLUE-PIPES, COPINGS, GARDEN EDGINGS, &c.

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with SOCKET JOINTS, in Two-feet Lengths.

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

Manufacturers also of

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleaned without disturbing the surface of the ground; adapted also for ventilation of Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

3s. 9d.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

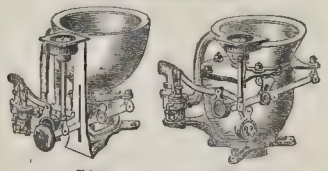
INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO., LAMBETH.

Extract from Jurors' Report:—

"H. Doulton & Co.—Stoneware Pipes, &c. excellence of manufacture and lowness of price."



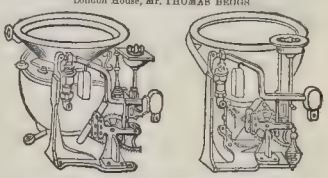
GLAZED STONEWARE DRAIN PIPES, TERRA-COTTA CHIMNEY TOPS, &c. &c.

Supplied on the lowest terms, direct from

H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.



Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

GUEST & CHRIMES, FOUNDRY and

GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self acting and Full Water-Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas-Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

WIMBLEDON FREEHOLD BUILDING LAND AND VILLA RESIDENCES.

MR. H. O. MARTIN will SELL by AUCTION, at the MART, opposite the Bank of England, on TUESDAY next, APRIL the 28th, at TWELVE for ONE o'clock precisely, valuable PLOTS of FREEHOLD BUILDING LAND, near the railway station and new church. Well drained by a main sewer; also a PAIR of well-built FREEHOLD VILLAS, of the value of 60l. per annum each.—Plans, with particulars and conditions of sale, may be had of Messrs HILLIARD, DALE, & STRATTON, 3, Gray's-Inn-Square; J. WRIGHT, Esq. New Inn; and at the Auctioneer's Offices, 18, Adam street, Adelphi.

TO BUILDERS AND OTHERS.—Very eligible LEASEHOLD BUILDING GROUND, 1 acre 2 roods 25 perches, Waterloo-place, Highroad, New Cross, being in the midst of a well-populated district, affording 600 feet of frontage, and well suited for the erection of 40 six-roomed houses, or a large manufactory. Lease 63 years. Ground rent 30l. or 40l.

MESSRS. TEBB, BROS. will SELL the above ESTATE, estimated to produce a Ground Rent of 130l. per annum, by AUCTION, at the MART, on WEDNESDAY, MAY 13th, at ONE o'clock, in ONE LOT.—Plan and Particulars by Post; at the "Dover Castle," Broadway; the Mart; and 3, Adelaide-place, London Bridge, E.C.

SHOOTER'S HILL, KENT.—VALUABLE FREEHOLD BUILDING LAND.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the TOWN HALL, Woolwich, on FRIDAY, MAY 15th, 1863, at SIX for SEVEN o'clock in the Evening, 15 Lots of FREEHOLD BUILDING LAND, with frontages to the Eglinton and Brent roads, situate near to the Royal Military Academy, Woolwich Common, and well adapted for the erection of superior Villa Residences. Nine tenths of the purchase money may remain on mortgage or contract at five per cent. to be paid in nine years, by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; and of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

WIMBLEDON, Surrey.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, MAY 18th, at TWELVE for ONE o'clock, in sixty two lots, the remaining portion of the valuable FREEHOLD BUILDING LAND, free from tithe and land-tax, with frontages to the new road called Hartfield-road, close to the Wimbledon Station on the main line of the London and South-Western Railway. Nine-tenths of the purchase-money may remain on mortgage or contract, at 5 per cent. to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; and of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Mansion, House and Premises, with orchard and garden, and valuable Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, Bartholomew-lane, City, on MONDAY, MAY 25, at TWELVE for One o'clock, a further PORTION of this eligible ESTATE, late the property of the Hon. East Indis Company: consisting of the noble mansion, built in the most substantial manner, and well adapted for a school or public institution; containing on the basement story, entrance-hall, dining-room, and two other rooms; on the ground floor, a noble entrance hall, dining-room, ante-room, library, four sitting-rooms, two other rooms, wide oak staircase; on the basement, servants' hall, kitchen, scullery, larder, housekeeper's room, butler's pantry, cellars, &c. The steward's house contains, on the first floor, four bed-rooms; on the ground floor, two parlours and sitting room; on the basement, kitchen, scullery, and offices, and garden. Also eligible Freehold Building Land, with frontages to the Upper Addiscombe-road. The lot on which the lodge stands is set apart for a tavern, ten lots for business purposes and the remaining lots are adapted for good Villa Residences. The property is within ten minutes' walk of the New and East Croydon Stations, about a mile of that at West Croydon, and when the Addiscombe Railway is completed the Station will be on the Estate; thus bringing the property in constant communication with the City and West end at all times of the day. Nine tenths of the purchase money on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained about ten days before the sale of Mr. PALACE, South Lodge, Addiscombe; of the principal Inns in the neighbourhood; of Messrs. RUSSELL & DAVIS, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

CONTRACTS.

KINGSTON-UPON-HULL LOCAL BOARD of HEALTH.—To CONTRACTORS.—The Local Board of Health of Kingston upon Hull are prepared to receive TENDERS for the OUTFALL DRAINAGE of the WEST DISTRICT of the Borough of Hull, comprising the construction of upwards of four miles of brick sewers and other works in connexion therewith. Trial shafts have been sunk on the proposed lines of sewers, the results of which may be seen, with the plans of the intended works, on application to Mr. J. FOX SHAILE, C.E. Surveyor to the Local Board, at his office, Sculcoates-hall, Hull, where also copies of the specification, forms of tender, and bills of quantities may be obtained on payment of two guineas (to be returned to parties tendering in accordance with the specification), on or after THURSDAY, the 16th inst. Sealed Tenders, endorsed "West District Drainage," addressed to the Chairman of the Committee of Works, Sculcoates-hall, Hull, must be forwarded on or before THURSDAY, 30th APRIL, 1863. The Board do not bind themselves to accept the lowest or any Tender. By order,

Hull, April 2nd, 1863. C. S. TODD, Clerk to the Board.

Notice is hereby further given, that the time for receiving Tenders for the above-mentioned work is EXTENDED UNTIL WEDNESDAY, the 6th day of MAY, 1863.—By order,

Hull, 20th April, 1863. C. S. TODD, Clerk to the Board.

TO ENGINEERS & CONTRACTORS.—SHEERNESS WATER WORKS.—The Local Board of Health for the District of Sheerness, in the County of Kent, hereby give Notice that they are prepared to receive TENDERS from persons willing to Contract with them for the following Works, viz.: to provide and Execute the said Works, and to maintain for Twelve months in good working condition, One Vertical Compound high and low pressure Condensing Steam Engine, of Twenty nominal horse power. Two Boilers, and One set of Three-throw Pumps, &c. Persons desiring to Tender may obtain specifications and every requisite information by applying to Mr. JAMES LUND, the Surveyor of the Board, at his Office, 19, Montague-terrace, Sheerness. Sealed Tenders, endorsed "Tenders for Engines," &c. are to be delivered at the Office not later than TUESDAY, the 5th day of MAY, 1863, at SIX o'clock in the Evening.—By order of the Sheerness Local Board of Health,

Office of the Local Board of Health, Sheerness, 13th April, 1863. EDWARD PELKIN, Clerk.

TO BUILDERS.—Builders desirous of TENDERING for the RESTORATION and ENLARGEMENT of the CHURCH at Wootton St. Lawrence, near Basingstoke, Hants, may see the plans and specification at Mr. R. AWBERY'S, the Churchwarden, at Wootton aforesaid, on and after the 4th of MAY next. Tenders to be delivered at the Office of the Architect, Mr. JOHN COLSON, St. Swithin-street, Winchester, on or before the 18th day of MAY next. By TWELVE o'clock at noon. No pledge is given to accept the lowest or any Tender.

TO SEWER CONTRACTORS.—The Board of Works for the Fulham District, in the County of Middlesex, hereby give Notice that they will be ready at the Board Meeting to be held at Broadway House, Hammersmith, on WEDNESDAY, the 20th day of MAY, at TEN o'clock precisely, to receive sealed TENDERS from Parties who may be willing to contract for the laying down, constructing, and completely finishing a certain intended BRICK SEWER of about 228 feet in length, and other Works connected therewith, in KING STREET WEST, in the Parish of Hammersmith. Plans, Specification, and Detail Drawings of the Works, together with the Form of Tender, may, with other Particulars, be obtained at Broadway House, Hammersmith, between the hours of TEN a.m. and FOUR p.m. on any day previous to the 18th day of MAY. Sealed Tenders to be addressed to the Chairman of the Board at their Office, at Broadway House, on or before WEDNESDAY, the 20th day of MAY, at TEN o'clock, and the party whose Tender may be accepted will be required to enter into a Contract and Bond with two sufficient Sureties for the due performance of the undertaking, such Contract and Bond to be prepared by the Solicitor to the Board at the expense of the Contractor. The Board does not pledge itself to accept the lowest or any Tender.—By order, W. LOVELY, Clerk.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.

NOTICE to BUILDERS.—Tenders are required for REPAIRING, PAINTING, WHITEWASHING, &c. the interior of the BUILDINGS in the west rear range, ROYAL ARTILLERY BARRACKS, WOOLWICH.

Parties desiring to Tender for the execution of these works, must leave their names at this Office, on or before the 14th day of MAY, 1863, and pay the sum of 10s. 6d. for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Woolwich, April 24, 1863

TO CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director of Contracts, War Office, Pall Mall, London, on or before MONDAY, the 11th MAY, 1863, from persons desirous of CONTRACTING with the Secretary of State for War for CLEARING AWAY the MUD from the front of the New Gun Wharf, at Chatham.—Forms of Tender may be obtained on application at the Royal Engineer Office, Chatham Lines, between the hours of TEN and FOUR till the 9th MAY, 1863. Tenders to be addressed to "The Director of Contracts, War Office, Pall Mall, London, S.W." and to be delivered free, endorsed, "Tender for Clearing away Mud at Chatham." No Tender can be admitted after the said 11th day of MAY, 1863. N.B.—The Secretary of State for War reserves to himself the right to reject the whole or any of the Tenders

Royal Engineer Office, Chatham 27th April, 1863.

LONDON DISTRICT.—To BUILDERS and OTHERS.—WAR DEPARTMENT TRIENNIAL CONTRACTS for WORKS and REPAIRS.—The Commanding Royal Engineer, London District, hereby gives Notice that sealed TENDERS will be received at the War Office, Pall Mall, London, S.W. addressed to the Director of Contracts, on or before 21st MAY, 1863, for WORKS and REPAIRS at the undermentioned Stations, from 1st JULY, 1863, to 31st MARCH, 1865, inclusive, viz.:—

London, comprehending Tower of London, and all the barracks or other buildings within 5 miles of that place.

Schedules and printed forms of Tender, price 7s. 6d. each, and all necessary information, may be obtained on application at the Royal Engineer Office, 31, James street, Buckingham Gate, London, S.W. from THURSDAY, the 23rd day of APRIL, until TUESDAY, the 14th day of MAY, 1863, inclusive, between the hours of ELEVEN a.m. and THREE p.m.

The Secretary of State reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, 31, James-street, Buckingham gate, London, S.W. 17th April, 1863.

The specification can be seen at the Offices of the Board, as below, between the hours of NINE and FIVE. Tenders are to be sent in under seal, addressed to the Board, and endorsed "Tender for Paving, Battersea," on or before the 13th MAY next. Security will be required for the due execution of the Contract. The Board do not pledge themselves to accept any Tender.

By order of the Board of Works for the Wandsworth District,

ARTHUR ALEXANDER CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. 20th April, 1863

TO BUILDERS.—Builders desirous of TENDERING for taking down and RE-BUILDING the PARISH CHURCH at STOCKBRIDGE, Hants, may see the plans and specifications at the Office of the Architect, Mr. JOHN COLSON, St. Swithin's-street, Winchester. Tenders to be delivered to the Rev. W. H. TRIBE, at Stockbridge, by TWELVE o'clock at noon on the 9th of MAY next. No pledge is given to accept the lowest or any Tender

April 27th, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS.—TENDERS are required for the ERECTION of a WESLEYAN CHAPEL at Wellington. Plans and specifications may be seen at Mr. LEWIS'S, Bond-street, to which Tenders must be sent, not before WEDNESDAY, the 6th of MAY. Each Tender must be sealed, and the Committee do not bind themselves to accept the lowest or any Tender.—N.B. The building is intended to be commenced about Midsummer next.

RESTORATION of SAINT PHILIP'S CHURCH, Bristol.—TO MASTERS, BUILDERS, and OTHERS. Persons desirous of TENDERING for the RESTORATION of the above CHURCH can inspect the specifications, and obtain copies of the bill of quantities (printed for the purpose), which will be returned to persons Tendering, at the office of Mr. JAMES KNIGHT, the Architect, at the Victoria Hall, Bowood-road, S.E. Tenders to be delivered to the Rev. Mr. BLOOMFIELD, 8, Stoke-terrace, Philpot-street, E. not later than FRIDAY, 8th of MAY, at TWELVE o'clock at noon.

TO BUILDERS. — Builders desirous of TENDERING for the ERECTION of LAUNDRY, WASH-HOUSE, GREENHOUSE, and other repairs, for A. G. MILNE, Esq. at Eltham, may see the plans and specifications at the Office of Mr. THOS. CHESSER BASORTH, Surveyor, Eltham. Tenders to be sent in by PUBLIC notice, on the Sunday of MAY, 1863. The lowest or any Tender will not necessarily be accepted.

TO BUILDERS.—TENDERS are required by Messrs. SOUTHERN & COLE for the ERECTION of a PAIR of HOUSES at Fore-hill. Drawings and specimens to be seen on application to Mr. SEXTON DAVALL, Architect, 18, Bedford-sq., Chemside.—N.B. Messrs. S. & C. do not bind themselves to accept the lowest or any Tender, and builders must be prepared with references and security, as old either to be required.
April 25th, 1863

TO CONTRACTORS and OTHERS.—The Local Board for the district of Chorley (Alderley Edge), Cheshire are desirous of receiving TENDERS for the EXECUTION of CONTRACT No. 1 in laying the necessary WORKS in making a MAIN OUTLET SEWER. Specifications, with plans and sections, may be obtained at the Office of the Engineer to the Board, Mr. R. G. TRAFF, 18, Corporation-street, Manchester, on payment of Five on and after the 1st MAY.—Sealed Tenders, endorsed "Tender for Contract No. 1," must be left at the Office of the undersigned, 16, Convent-street, Manchester, on or before THURSDAY, 14th MAY.—The Board do not bind themselves to accept the lowest Tender. Dated this 23rd April, 1863. W. L. WELSH, Law Clerk to the Board

BOARD of WORKS, POPLAR DISTRICT.—To BUILDERS and CONTRACTORS.—Notice is hereby given, that the Board will meet on TUESDAY, the 12th day of MAY next, at SIX o'clock in the evening precisely, in the Board Room, East India Dock Road, to receive TENDERS from persons willing to CONTRACT for the construction of a FOOT BRIDGE across the North London Railway, to connect Railway-row Cross-streets, Bromley. The Board do not bind themselves to accept the lowest or any Tender, and the parties tendering, or some one on their behalf, will be required to be in attendance on the Board at the hour above mentioned, and the person whose Tender shall be accepted will be required to pay down immediately the sum of 5l for the expense of the Contract and Bond, and to furnish the names of two responsible parties (householders), in the sum of 300l. for the due performance of the Contract. Tenders upon forms prepared for that purpose, and no other will be received, and endorsed "Tender for Foot Bridge, Bromley," are to be delivered, properly sealed, on or before the 12th day of MAY next, at TWELVE o'clock noon, after which time no Tender will be received. Plan and specification can be seen, and forms of Tender had, on application at the Surveyor's Office, from NINE in the FOUR p.m. any day until the 11th of MAY. CHARLES F. CREW, Clerk to the Board.
Offices, East India Dock road, April 30, 1863.

TO BUILDERS. — The Guardians of the Poor of the Parish of Lambeth are prepared to receive TENDERS for the EXTERNAL REPAIRS and PAINTING required to be done at the House of Industry, Norwood. The specification, with the conditions as to the proposed Tenders may be seen at the Office of the Architect, Mr. HERBERT PARRIS, No. 1, Kennington-green, Lambeth, on and after WEDNESDAY, 6th MAY next.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A Meeting of this Board will be held on MONDAY, the 11th day of MAY, 1863, at SIX o'clock in the evening, at the Office of the Board, No. 15, Great Alie-street, Whitechapel, to receive TENDERS for the EXECUTION of the works required with the SEWERS and DRAINS of the District, mentioned and described in the specification or schedule of Contract prepared by direction of the Board, for the period of ONE YEAR, from which specification and form of Tender may be obtained at the Office of the Board, upon payment of 1s. at which time and place persons Tendering. All Tenders must be delivered at the Office of the Board previous to the time of meeting; and any Tender which is not from the printed form prepared by the Board, and duly sealed for the purpose by the person Tendering, will be rejected. The Board do not bind themselves to accept the lowest or any Tender.
ALFRED TURNER, Clerk to the Board.
15, Great Alie-street, Whitechapel, 23rd April, 1863.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the county of Essex, are prepared to receive TENDERS for the LAYING and CONNEXION of HOUSE DRAINS to the Public Sewers, and other Works. The whole of the Terms and Contracts are to be in accordance with conditions, plans, and specifications, which may be seen and obtained at the Rokeby House in Stratford, at the office of Mr. MARSHALL, the Surveyor to the Board, and the Tenders must be delivered at the Office, at Rokeby House, not later than MONDAY, the 11th day of MAY next—By order of the Board. CHAS. WILSON, Clerk
Rokeby House, Stratford, E. April 24th, 1863

BRIGHTLINGSEA GAS and COKE COMPANY (LIMITED). Contractors are invited to TENDER for the ERECTION of NEW GAS WORKS for the above named Company. Plans and specifications have been prepared by Mr. JAMES CUBITT, of Chelmsford, C.E., Engineer, of whom either the same can be seen either at his Office, or on application to the Secretary, at the Office of the Company. The work is divided into two contracts

No. 1 Contract comprises the Builder's Works, and
No. 2 the Apparatus, Iron Work and Street Mains.

Tenders for one or both of the above, endorsed, and delivered to the Secretary, on or before the 7th day of MAY, 1863. The Directors do not bind themselves to accept the lowest or any Tender
ELLIS C. ATKINS, Secretary.
Gas Company's Office, High-street, Brightlingsea, Essex.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the county of Essex, are prepared to receive TENDERS for the CONSTRUCTION of a SEWER, between the Barking road and Rathbone-street, Hallsville, and also for MAKING a ROAD between the said Sewer and Barking road, in the district of the said Board, according to plans, sections, specifications, and works required by Mr. Marshall, the Surveyor to the Board, and which may be seen at his Office at Rokeby House, Stratford, where printed forms of Tenders may be obtained, together with any further information required. Tenders endorsed "Tenders for Sewer and Roads," are to be sent to me on or before MONDAY, the 4th day of MAY next. By order of the Board. CHAS. WILSON, Clerk.
Rokeby House, Stratford, April 24.

TO BUILDERS. — Persons desirous of TENDERING for the ERECTION of a RECTORY-HOUSE at High Ham, four miles from Langport, Somerset, can see the plans and specifications upon application to their surveyor, Mr. ROBERT STRONG, at High Ham, on and after MONDAY, the 4th day of MAY. Tenders to be sent to the Architect, JOHN NORTON, Esq. 23, Old Bond-street, Piccadilly, W. on or before the 16th of MAY. The Rector does not bind himself to accept the lowest Tender submitted.

THE PLYMOUTH HOTEL COMPANY, Limited. DUKE of CORNWALL HOTEL. To BUILDERS.—TENDERS are invited for the RECTION of the above HOTEL, in Plymouth, Devon. The drawings, specifications, and conditions of Tender may be seen at the Office of the Architect, Mr. CHARLES F. HAYWARD, 8, Adam-street, Adelphi, London, on the 11th, 12th, and 14th of MAY next, and from the 20th to the 27th of MAY, at the Company's Office, Continental-street, Plymouth. Copies of the bills of quantities (for which no guinea will be charged) may be obtained of the Architect or Secretary, and after the 14th of MAY. Tenders must be sent to the undersigned on or before FRIDAY, the 29th of MAY, at 10 o'clock precisely, and Forms of Application for the remaining Shares to be issued at the under signed
HAMILTON WHITEFORD, Secretary.
Courtenay-street, Plymouth

SOUTH LEICESTERSHIRE RAILWAY. TO CONTRACTORS and BUILDERS.—The Directors are desirous of receiving TENDERS for the ERECTION of PASSENGER STATIONS and GOODS ACCOMMODATION at Elmsthorpe, Narborough, and Whetstone. Printed circulars of Tenders may inspect the drawings, and obtain information at the intended Station at the Office of the Engineer, Mr. JOHN ADDISON, C.E., Delahay-street, Westminster on MONDAY, the 4th of MAY between the hours of TEN and FOUR o'clock. Tenders addressed to the Secretary are desired to be sent in before MONDAY the 11th of MAY, at TEN o'clock A.M. The Directors do not bind themselves to accept the lowest Tender.—By order,
JAMES PLAISON, Secretary.
Leicester Station, April 27th, 1863

BLACKFRIARS BRIDGE. — Notice is hereby given, that the Bridge House Estate Committee will meet at the Guildhall, on TUESDAY, the 9th day of JUNE next, to receive TENDERS for the EXECUTION of a TEMPORARY BRIDGE across the River Thames, on the west side of, and adjoining the Blackfriars Bridge. The piles of the intended Bridge and approaches of the Works to be executed, and further particulars thereof, may be seen at the Office of the Clerk, JOSEPH CUBITT, Esq., No. 1, Great George-street, Westminster. The Tenders must be sealed up, addressed to the Bridge House Estates Committee, endorsed "Tender for Temporary Bridge at Blackfriars," and left at the Committee-room, in Guildhall, on TUESDAY, the 9th day of JUNE, at TWELVE o'clock precisely, on which day the parties Tendering will be expected to be in attendance at Guildhall, to attend any further communication the Committee may think proper to make with them. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.
FERDINAND BRAND, Comptroller.
Guildhall, 30th April, 1863

BROKERS.—Messrs. Parry & Co., Bridge-lane
SECRETARY (pro tem.).—Thomas Piper, Esq.
TEMPORARY OFFICES.—3, Parliament-street, Westminster.
PROSPECTUSES AND FORMS OF APPLICATION FOR SHARES may be had.

The Patent Concrete Stone is manufactured by consolidating articles either of sand, gravel, chalk, clay, or any like material by means of a chemical process of mixing and compressing.

Blocks of stone of any size, hard and durable as the best natural stone, can be produced by this simple, however effective, process, at a far less expense than by the ordinary mode of working stone.

No time is wasted in the manufacture, and stone perfectly the structure is at once erected.

It is equally to every purpose, both constructive and decorative, to which stone is applied. The stone has been already employed upon the stations of the Metropolitan Railway, at both the London Chatham, and Dover Railway, and at Aldershot Barracks, and has proved that it hardens by exposure to the atmosphere, and is unaffected by the daily action of tidal sea water during many months.

A solid block, measuring 7 feet 3 inches by 2 feet 2 inches by 1 foot, was used for the foundation of a steam engine at work in the International Exhibition, and for that block the prize medal was awarded.

The Company has made a very considerable purchase of the patents for the manufacture of stone, also for the fabrication of natural stone, and also of the factories and plant of the inventor, situate at Lowestoft and Norwich, by which the Company will be left in a commanding remunerative position. Many applications for licenses have been received and are now under consideration.

A copy of the Articles of Association can be seen, and prospectuses obtained at the Temporary offices of the Company, or from the Brokers, to whom applications for shares are to be sent.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company are prepared to give guarantees of its durability, as fully confirmed by "SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT, 3rd December, 1862. "Much rain has fallen during the past year, and I am pleased this morning, respecting the Gutta Percha Piping, for Pump service, to state that none of the joints have failed in any respect. Many builders and other persons have taken occasion to call the attention to the best apparatus they have ever seen for the purpose, and I am satisfied that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY ROAD, LONDON.

NEW PATENT PORTABLE STEAM ENGINES AND BOILERS.

Contractors' Locomotive. Stationary Engine. Steam Crane. Hoisting Engine. Agricultural Engine.

STATIONARY ENGINES.

THESE Engines require no Chimney-Shaft, nor Building whatever, a Cast-Iron Ash-pit forming the SOLE-PLATE, and they may be set up anywhere and started at once. Being very carefully made of the best materials, they may be perfectly relied on to work satisfactorily and, from their self-completeness, they may be erected and set to work by any ordinary mechanic to instructions supplied. These improved Engines have the great advantage of being applicable to a variety of purposes, the small space they occupy rendering them available where ordinary Engines cannot be used.

PRICES OF ENGINES AND BOILERS COMPLETE.

Orders requiring Despatch and Punctuality can be executed in a few days.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, d involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron UTTERS, to the adoption of another and less effective mode of draining.

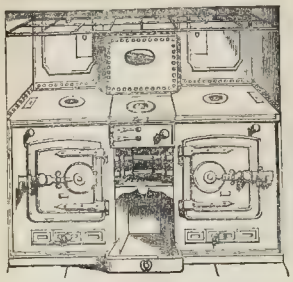
PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS



Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

CUNDY'S MULTUM IN PARVO ECONOMIC POOR MAN'S KITCHENER.

WHEN OPEN.

These drawings represent a Stove of the following dimensions:—24 inches long, 24 inches high, and 15 inches deep, when used as an open fire-stove, and also when closed, for BAKING, BOILING, and IRONING. The oven, which is placed underneath the fire, is 18 inches long, 14 inches deep, and 11 inches high. The flue passes all round the Oven, and the Boiler will contain six gallons of water. This Stove, which is also made 30 inches long, 26 inches high, and 15 inches deep, is admirably adapted for BACK KITCHENS, as an auxiliary Cooking Stove, and for STILL-ROOMS, NURSERIES, and SMALL HOUSES, the consumption of coal being only 112 lbs. per week. This Stove, also Cundy's Patent BRICK OVEN Double Full-down Bar KITCHEN RANGE; also Cundy's Warm-Air Ventilating Stove, suitable for CHURCHES, HALLS, STAIRCASES, and SCHOOLS, for which invention Mr. Cundy received the SOCIETY OF ARTS MEDAL, also a Medal from the Royal Commissioners of the GREAT EXHIBITION of 1851, can be seen in operation daily, at the Show-rooms of

RICKET'S & HAMMOND'S

VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

5, AGAR STREET, STRAND, LONDON, W.C.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774.

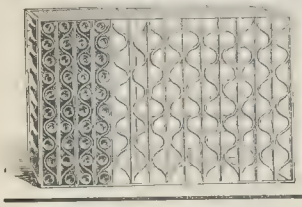
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in porcelains, brass, bronzed, gilt, carved woods, glass, &c. &c. to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass handles, and metal sundries, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 6 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862
"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Range is the placing of the OVEN and ROASTER one above the other instead of side by side, and the ROASTER is constantly replenished with fresh air."

A PRIZE MEDAL for SUPERIOR LOCKS
was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper, and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furniture, of all kinds, with Patent Shilling Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 9s 6d each.

J. H. BOOBBYER (late STURLAND & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Clare market, London.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with cast-crete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

Manufactured by THE LIZARD SERPENTINE COMPANY (Limited), Office, 24, St. James's-street, London, S.W.; Works, Carleon Cove, Lizard, Cornwall. Agent for Manchester, W. OAKDEN, 94, King-street.

HY. GEORGE & COMPANY, CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E. Seasoned Caen Stone always in Stock, and a large assortment of Sawn Slab in Packspring, Harehill, &c. &c. Grindstones, Steps, Sills, Coping, Landings, Paving, and all descriptions of Yorkshire Block. Cargoes shipped direct from the Quarries. Prices and specimens forwarded on application.

POLISHED GRANITES.—TOMBS, COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by WILLIAM & JOHN FREEMAN, 27, MILLBANK STREET, LONDON, S.W.

GRANITE.—The Cheesewring Granite Company, Limited, Liskeard, Cornwall. SHOW ROOMS, 6, CANNON-STREET, E.C. London Agents—TREGELLES & TAYLOR. Manager—JAMES J. TRATHAN, Liskeard. This Granite is selected for the New Westminster Bridge. DRINKING FOUNTAINS, MONUMENTS, and ORNAMENTAL WORKS supplied, and ARTISTIC DESIGNS suitable to the materials forwarded on application. EDGE RUNNERS OF SUPERIOR QUALITY.

TISBURY STONE. The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited, Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically. It will supply the long-wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, high class architecture, and works of art, requiring only to be known to become the STONE OF THE DAY. Specimens, Price, &c may be obtained of SAMUEL TRICKETT, General Stone Merchant, Millwall; or at the Offices of the Company, 3, Austin place, London Bridge.

TAKE NOTICE. CONTRACTORS, BUILDERS, and MASONS. All Estimates made at a considerably reduced cost for Marble Work. Good Vein Box Chimneypieces at the reduced price of 30s to 50s. Statuary Chimneypieces, from new designs, carved, 10l to 40l. each. A great variety of Coloured Marbles always ready to select from. The Trade will find a Liberal Discount at this Establishment. WESTMINSTER MARBLE WORKS, EARL STREET, HORSEFERRY ROAD, S.W.

RED MANSFIELD STONE, WHITE MANSFIELD STONE. YELLOW MAGNESIAN or BOLSOVER LIMESTONE. Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station. Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

CAEN and AUBIGNY STONE. FOUCARD, BROTHERS, Late F. FOUCARD, STONE MERCHANTS and QUARRYMEN. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Office—10, Three Crown-square, Southwark.

LITTLE CASTERTON FREESTONE. Apply for prices, &c. to OCTAVIUS N. SIMPSON, STAMFORD; and see Specimens at the Office of Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W. This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks Lime, and Old Bricks. Dry rubbish delivered, per barge, to any quantity alongside the Thames.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862. Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes. Apply to Mr MACDONALD, Aberdeen; or to Mr. DAVID WILLET, London Agent, 404, Euston-road, N.W.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplied direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank street, London, S.W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862. Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article. Chimney-pieces, Billiard-tables, Table tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 38 and 40, Upper Belgrave-place, Pimlico, S.W.

GRANITE OBELISK for SALE.—The beautiful OBELISK, in polished Grey Granite, that stood in the Eastern Nave of the Exhibition Building, is now OFFERED for SALE.—Apply to Messrs. H. POOLE & SON, Great Smith-street, Westminster. The Obelisk is erected at Lloyd's Wharf, Millbank, where it may be seen. It is suitable either for a monument or for an ornament for pleasure grounds.

TWO PRIZE MEDALS OBTAINED AT THE INTERNATIONAL EXHIBITION. THE LLANGOLLEN SLAB and SLATE COMPANY, LIMITED, have in stock a quantity of enamelled SLATE CHIMNEYPIECES, of the most chaste designs, and at prices ranging from 16s. to 10l 10s. Their sales now extend throughout Europe, America, Australia, and the East Indies, for these beautiful articles, which are superseding marble. Slate Slabs, Cisterns, Sinks, Filters, and Roofing Slates, always on hand. For further particulars apply at the Company's Depôt, 4, South Wharf-road, Praed-street, Paddington, W.

SLATES.—MESSRS. JONES & CO. have a STOCK of SLATES of different sorts from the best quarries in Wales; also Slabs and Cisterns; delivered at any station in quantities of not less that five tons.—Price forwarded and estimates given on application.—Address, No. 1, BOLD-TERRACE, CHESTER.

MEAD'S PATENT PREPARATIONS.—NOTICE.—BUILDERS and DECORATORS will find superior and unparalled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, wainscot, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the minature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand exposure to the weather. Light Oak, 4s. per gallon; Middle Tint, 5s. per gallon; Dark Oak, 6s. per gallon; Mahogany, 8s.; Rosewood, 8s.; Walnut, 8s. Varnishes for NAYLOR'S Stains may be had at the Factory, No. 4a, Jaines-street, Oxford street; also Manufacturer of Improved Kalsomine and Decorative Varnishes.

A SUBSTITUTE for PAINT, and at HALF the COST.—STEPHENS'S DYES or STAINS for WOOD.—Mr. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H. CHICHESTER, of Chittlehampton, near South Molton:— "The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church." H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

TO REMOVE or CLEAN OLD PAINT, VARNISH, &c. use NAENIARE & CO.'S PATENT LETHICIUM, which does it in twenty minutes. Sold at 5s per gallon. Also Brushes to apply and remove, 2s. per pair.—For particulars, apply at 11, St. Andrew's hill, London, E.C. Success guaranteed. N.B. Country orders must contain a cheque or Post office order.

CROWDEN and GARROD (successors to THOS. KENT & CO.), the celebrated PAINTING and GENERAL BRUSH MANUFACTURERS, FALCON-SQUARE, LONDON, E.C. ⁂ Also Manufacturers of the Patent India rubber Knife-boards, Cocoa-nut Fibre Door Mats, Matting, &c. T. KENT and CROWDEN & GARROD, are stamped on the Brushes.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c. One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W. N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

PRIZE MEDAL, 1862. HAMILTON & CO. No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W. Sole Manufacturers of C. A. WATKINS'S PATENT WIRE BOUND ROUND and OVAL PAINTING BRUSHES. Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' Graniers' Tools. These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

KENT'S PAINTING BRUSHES are all stamped G. R. KENT & CO. And are manufactured solely by G. R. KENT & CO. at 11, Great Marlborough-street, London, W. Established 1777. KENT'S BRUSHES have been celebrated for their superior quality for the last eighty four years, and may always be depended upon as the best that can be made.

IMPORTANT to BUILDERS and PAINTERS. Genuine White Lead, 30s. per cwt. Linseed Oil, 3s. 6d. per Gallon; Boiled Oil, 3s. 10d. per Gallon. Turpentine, 9s. per Gallon. Fine Pale Oak Varnish, 9s. per Gallon For cash, at EDWARD PRICE'S Colour and Varnish Warehouses, 30, Upper Ebury-street, and 45, Chesham-street, Pimlico, S.W. Every article for the Trade at the lowest prices.

TURPENTINE SUBSTITUTE, Manufactured by CARLESS, BLAGDEN, & CO. HOPE CHEMICAL WORKS, HACKNEY WICK, N.E.

Samples, Testimonials, &c &c may be had on application, or by letter to "The Works," or of KENWAY & CO. 15, Mark-lane, City, E.C. Every cask or can sent out bears the registered Brand of the Firm, without which they will not guarantee it to be of real manufacture.

TURPENTINE. GARROD & COMPANY'S ENGLISH TURPENTINE is superior in use to any other, and perfectly free from any offensive odour. Sample gallons may be obtained at the Manufacturers', price 4s. GARROD & COMPANY, Varnish, White Lead and Colour Manufacturers, 26, Upper Thames street, London, E.C.

TO RAILWAY CONTRACTORS and OTHERS.—For SALE, 500 LARCH POLES, the sizes for railway sleepers and telegraph poles. Price, 2s 3d each.—Apply to Mr. A. ROBERTS, Timbead, near Westbury, Wilts.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding Patents—their cost and the mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet street, London. ROBERT M. LATHAM, Secretary.

BRICKS can be SUPPLIED by J. T. COLING, at either of the following Stations, viz: HORNSEY, WOOD GREEN, SOUTHGATE, BARNET, POTTERS' BAR, or HATFIELD, on the Great Northern Railway, of sound serviceable quality and at moderate prices. Applications made at or addressed to New Barnet Wharf, Barnet Station, will be promptly attended to.

HOLLOW BRICK FIRE-PROOF FLOORS BUNNETT'S PATENT. THIS PATENT FOR SALE, OR LICENSES GRANTED. Apply to Mr. J. BUNNETT, ENGINEER, DEPTFORD.

LABOUR and SCAFFOLDING. — To BRICKLAYERS and OTHERS.—WANTED, the PRICE PER ROD, for the above, for about thirty rods. Situation seven miles from town.—For particulars, apply to Mr GIBLETT, Surveyor, 36, Southampton buildings, Chancery lane, W.C.

OATES'S PATENT SOLID BRICK MACHINE.—Persons who may be contemplating MAKING BRICKS by MACHINERY are requested to see the above Machine in operation before purchasing others. These Machines are warranted to make thirty perfect bricks per minute, and enough to be wheeled (as soon as made) to the kilns to be burnt; and from the time the clay is dug from the mine until the bricks are made and set in the kilns for burning does not exceed five minutes.—Application to be made either to J. P. OATES, Erdington, near Birmingham; or to OATES & BAYLIS, Stourbridge, from whom drawings and every information may be had, with card to view.

PENCILS, BLACK LEAD, and COLOURED CHALKS. A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen. Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

POLONCEAU and LIMMER ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c &c. apply to JOHN PILKINGTON, 15, Flat street hill, London, E.C. Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c, with instructions to lay it down.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1760)

Beg the attention of Architects, Builders, Decorators and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV XV XVI and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Cups, Mouldings of all sorts, and their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Cellarn and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.
PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.
Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is entirely free from White Lead, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether this is done for the purpose of lightening the Paint, or as the cheaper Zinc is the darker, is not known. We, however, would caution the Public that no genuine Patent Zinc Paint will ever willingly use such other Paint for their best work.
CHEAPNESS.—Although a ton of pure Zinc Paint contains twice the weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twenty gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

KELLY'S PRACTICAL BUILDERS' PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an abstract of the New Building Act for regulating the Construction of Buildings. THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and largely enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 3,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts upon the first publication in 1836, of the Encyclopædia. The Publishers and the Editor have, therefore, made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description has been originally prepared. By the selection of new articles, and omission of those of obsolete, this edition has now become a standard work, so that it may be received as fully and faithfully expressing the present results of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

This day is published.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION
Incorporated by Act of Parliament, 1860, 14, RUSSELL STREET, Covent Garden, W.C. Advances from £50 to £1,000 upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advances taken as rent. Greater advantages are offered to borrowers than at building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

POLYTECHNIC.—Open from 12 till 5, and from 7 till 10. Great Additions to and New Experiments in Professor Pepper's Lecture on Optical Illusions. Professor Pepper will (by the kind leave of the author) read and illustrate a portion of Mr Charles Dickens's Tale of "The Haunted Man," and the "Ghost" will actually appear to walk across the new platform arranged in the Large Theatre. N.B. In order to prevent disappointment, the "Ghost Illusion" will be shown every morning and evening at half-past 1 and 8 o'clock. New Lecture by J. L. King, entitled "Pneumatic Wonders," illustrated with new experiments, models, &c. and the "New Pneumatic Parcels Despatch Apparatus." Conjuring made Easy, by Mr James Matthews, illustrated by conjecture or mechanical agency. New Weber's Grand Opera of "Der Freischutz," in the Germania and humorous Schools. New Optical Scenery by Messrs. Child and Hall. The Instrumental Music by Mrs Pope, Mr. Tinney, and the whole of the Royal Family. The Vocal Music by Miss Fosbrooke, Mrs Clough, Mr. Robert Campion, and Mr. Claphin Henry Cairns, Lionel Brough, &c.

TO BUILDERS with Small Capital, wanting a Safe INVESTMENT. Mr. Sainsbury has a COUNTRY BUSINESS to let, established upwards of 100 years. Price, including Valuable Paint, &c. £75. Rent, £12. Includes capital dwelling, large stable, cart-lodge, &c. Very excellent connexion, with room for extension.—Apply, 39, Blackfriars road.

TO CARPENTERS, BUILDERS, and CABINET MAKERS.—TO BE SOLD, a bargain, a BUSINESS, situated in the City, Coming in, for stock in trade, and fixtures, about £60.—Apply to Messrs. GILES & CO. Auctioneers, 124, Aldersgate-street, City.

TO BUILDERS, CONTRACTORS, PLUMBERS, GLASS CUTTERS, &c. TO BE SOLD, the LEASE of FIRST CLASS PREMISES, together with the BUSINESS of a Builder, Glass-cutter, House-agent, &c. successfully carried on by the present proprietor for the last thirteen years, who is now about giving up the contracting, jobbing, and retail trade. The premises are well adapted for carrying on a large trade, both as a general contractor, house agent, and retail lead, glass, and colour warehouse, large frontage to a main thoroughfare. For further particulars apply on the Premises; or to Mr. S. TAYLOR, Nos. 1 and 2, Albany-place, Kentish Town road, N.W.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER HANGERS, &c. &c. The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Boots, contractors, Gosport:—
"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the wall was (I strongly estimate) with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cotton piles, at the townhall, Portsea, for her Majesty's War Department."
To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 19, London-street, London, E.C. where specimens of its application can be seen.

1863.—BENJAMIN EDGINGTON has a large quantity of New and Second hand RICK CLOTHS, which he sells, complete, now on Sale. Marquees and Pavilions for royal and noble parties, with boarded floors and elegantly decorated, on Hire. The Cups used at the Race Procession to be sold as Second hand. Netting and Sundry for Fruit Trees, &c.—Address, BENJAMIN EDGINGTON, 2, Duke-street, London-bridge, S.E. No other establishment.

The Builder.

VOL. XXI.—No. 1056.

The Art-Union of London Distribution.

As usual, the annual meeting of this Association was held on the last Tuesday in April, and, as usual also, passed off smoothly and satisfactorily. It took place in the Adelphi Theatre, and the attendance was very large.

The Right Hon. Lord Monteagle, the President of the Association, on taking the chair, congratulated the members that for the twenty-seven years they had been working they had a satisfactory history; and that they also had a satisfactory present. Like other modern sovereignties they had begun with wars and rumours of wars, but these had all passed away, and they were now in a most satisfactory position, with an overflowing exchequer. As long as his powers lasted, he would be found true to his post. After some general observations, his lordship called on Mr. Godwin, the honorary secretary, who read the following Report:—

For the twenty-seventh time it has become the duty of your Council to relate to you the proceedings of the year, and the steps taken in furtherance of the great objects of the Association; to set before you the balance-sheet, and to distribute amongst the subscribers, in accordance with the charter, works of art that have been prepared and the right to select others from the various public exhibitions of the current year. In fulfilment of this they are glad to be able to state that the subscription is considerably in excess of the last, and amounts to the sum of 12,838*l.* 6*s.* Throughout the kingdom and the colonies the warmest interest in the progress of the Association continues to be manifested, and evidence is every day accumulating of the good effects which have been produced by its operations over a large part of the globe. The illustrations of Tennyson's "Idylls of the King," and the engraving after Mr. Dickse'e's "Labour of Love," due to each member of last year, were handed to them on receipt of the subscription. In order thus to have the engravings ready, it of course becomes necessary for the Council to incur heavy liabilities in advance,—to engage for the payment of large sums of money out of subscriptions not merely as yet unpaid, but that might never be forthcoming. Engravings, for example, after D. Maclise, R.A., and after W. P. Frith, R.A., involving an expenditure to the extent of 5,600*l.*, have already been in hand for two or three years, and are not yet completed. The assured stability of the Association, however, and the existence of the Reserved Fund, which is now 11,077*l.*, prevent any difficulty in this respect.

For the ensuing year, Mr. J. Noel Paton, R.S.A., has executed for the Association twenty remarkable drawings, illustrating Coleridge's "Ancient Mariner." Commencing with the first four lines of the poem:—

> "It is an ancient mariner,
> And he stoppeth one of three.
> 'By thy long grey beard and glittering eye,
> Now wherefore stopp'st thou me?'"

Commencing with this, the artist has illustrated the weird story in designs of cognate power, leading up to the moral of the poem:—

> "Farewell, farewell! but this I tell
> To thee, thou Wedding Guest!
> He prayeth well, who loveth well
> Both man, and bird, and beast.
>
> He prayeth best who loveth best
> All things both great and small;
> For the dear God who loveth us,
> He made and loveth all."

The drawings are being reproduced by lithography, very efficiently, by Mr. W. Macfarlane, of Edinburgh, under the personal supervision of Mr. Paton; and, bound up with the poem, will form a book of greater value commercially, than the whole amount of the subscription, and one, moreover, that will be prized on its own account. Each subscriber of one guinea will be entitled to this volume. Or should other engravings be preferred, they may be had in lieu. Or, again, should the subscriber desire, instead, to become possessed of one of the bronzes, Parian statuettes, or any other work of art issued by the Association, this can be arranged on a tariff which has been prepared with special reference to the advantage of members.

The works here referred to were set up in the shape of a trophy at the late International Exhibition; and, properly looked at with reference to the history of modern art in England, formed a collection of great interest and importance, and one of which the Art-Union had reason to be proud. It included bronzes after Flaxman, Chantrey, Sir Richard Westmacott, Foley, Armstead, Thorneycroft, John Bell, Stephens, Jefferson, and Kirk, some of them commenced at a time when there were no bronze-workers practising the art in this country. There were also works in statuary porcelain (precursors of the artistic statuettes which now fill the shop windows), after Gibson, Calder Marshall, Foley, Durham, Lawlor, Wyon, and others; with electrotype bas-reliefs; castings in iron; and the only series of artistic medals that is being produced in Great Britain.

Following up these various works the Council have caused the reproduction in statuary porcelain, from a reduced model (by the sculptor, of Mr. Durham's marble group, "Go to Sleep," purchased by a prizeholder in the distribution of 1861. Examples of this will be awarded to-day.

The Council have also obtained, with the express permission of her Majesty the Queen, the copyright of Mrs. Thorneycroft's bust of the Princess Alexandra, executed by the artist for H.R.H. the Prince of Wales on the occasion of their marriage. A number of these beautiful busts will form part of the present distribution. We should be unlike the whole nation if,—when referring to this most happy incident,—this undoubted Heart Union which all have hailed with delight and are looking to with hope,—we did not express the feelings of deep gratification with which, in common with all her Majesty's loving subjects, we are inspired. The Prince has himself studied on the spot the arts of all peoples; has seen Nature in every clime and under all aspects. That his Royal Highness, following in the footsteps of his beloved and highly-gifted father, the Prince Consort, may be led, amongst other good works, to give his aid in promoting the fine arts of this country; the elevation through them of common things; and the consequent increase of home joys, must be the earnest prayer of all enlightened minds.

The bust (the only portrait, it should be mentioned, for which the Princess has yet sat to any artist in England) will be ready for delivery in the course of a few weeks. In continuation of the medallic series, Mr. Wyon is executing a model of Bacon, the sculptor; and Mr. Wilson one of Benjamin West. This collection now includes fourteen medals, each commemorating a painter, sculptor, or architect, and one of his most famous works.

The lamented death of Henry Thomas Hope, esq., who presided at the first public meeting of the Association, and the retirement of William Ewart, esq., M.P., a member of the first council, leave two vacancies. These have been filled by the election of E. S. Dallas, esq.; and James Anderson Rose, esq.

The Council were called upon by a spontaneous resolution passed at the last general meeting of the Association, to take steps to recognise the services of the hon. secretaries. A sub-committee was accordingly appointed to consider the matter, and in their hands it at present rests.

To the exertions of the local honorary secretaries and agents the Society has been this year, as always, in a very great degree indebted for its success. The Council thought it advisable, in a circular lately addressed to those gentlemen, to point out that for the current year it would be especially necessary to make considerable efforts to keep up the amount of subscriptions, in the face of the many demands on the resources of the public; and since, amongst 700 or 800 representatives, there would in all probability be some who found it no longer convenient to devote the requisite time and trouble to collecting subscriptions, it was urged that, in such cases, it would be desirable to transfer the agency, or to obtain the services of a coadjutor.

The result has proved that the suggestion was not out of place, since a very considerable increase of numbers has been attained in many places by the greater activity of our correspondents.

The Council must also repeat their thanks to the Society of British Artists, to whose continued courtesy they owe the use of the Suffolk-street galleries, at small cost, for the annual exhibition of the prizes.

As a matter of detail it may be well to take this opportunity of publicly noticing a part of this Society's practice which has of late been a subject of frequent inquiry in the office. This is in reference to the want of a *number* on each receipt or ticket given for a subscription. All the Society's agents being supplied with books of receipts in which we can, of course, only approximate to the number which may be required by each; if each receipt bore a number, there would of necessity be a large portion of these unappropriated; and if any such were by accident placed in the wheel, or if any of those belonging to receipts given to subscribers were left out, there would in either case be an injustice committed. By the practice we have always followed the names are entered from the counterparts of the receipts, and from the agents' lists, in the large book used at the drawing, and are numbered as they are entered; and the corresponding tallies, previously prepared and arranged by hundreds on wires, are carefully checked by three members of the Council, so that perfect certainty is ensured that the proper number of tallies, and no more, is placed in the wheel,—a result which it would be almost impossible to guarantee by the method of numbered receipts. Any member who desires it may learn his number by applying at the office a few days before the distribution.

The following is an abstract of the accounts. A full statement of receipts and expenditure will be printed as usual, with this report, and circulated:—

	£	s.	d.
Amount of subscriptions of the year	12,858	6	0
Cost of printing report, almanacs, and circulars	477	15	0
Commission and expenses of agents, and advertising	918	14	8
Rent, salaries, carriage of parcels, &c.	1,312	8	2
Reserve of 2½ per cent. required by the charter	321	9	0
Cost of printing, paper, &c., of print and outlines	3,340	9	2
Amount allotted for prizes	6,487	10	0
	12,858	6	0

The accounts have been audited by two members of the general body of subscribers, John Jones, esq., and W. P. Moore, esq., and three members of the Finance Committee.

The sum set apart for prizes to be selected by the prizeholders themselves is thus appropriated:—

35	works at	£10	each.
30	,,	15	,,
25	,,	20	,,
20	,,	25	,,
12	,,	35	,,
12	,,	40	,,
10	,,	50	,,
3	,,	75	,,
3	,,	100	,,
2	,,	200	,,
—			
152			

To these are added,—

The great chief prize, "The Dancing-Girl Reposing," a statue in marble, by W. Calder Marshall, R.A.

6 Statuettes in Bronze, "Caractacus," by J. H. Foley, R.A.

200 Statuettes in Porcelain, "Go to Sleep," by Joseph Durham.

300 Porcelain busts, of H.R.H. the Princess of Wales.

100 Tazzas in commemoration of the late Prince Consort, designed by J. Leighton.

150 Pairs of Bas-reliefs in fictile ivory, of subjects from Milton, by E. Wyon and R. Jefferson.

and 200 Books of Etchings, by E. Radclyffe, after the late David Cox.

making in all 1,100 prizes, in addition to the engraving and volume of illustrations received by every member; and the Parian busts due to those who have subscribed for ten years consecutively without gaining a prize.

The mode of allotting the tazzas, bas-reliefs, and etchings will be that pursued on the last occasion. The picture prizes, bronzes of Caractacus, statuettes, and busts, will be drawn from the wheel as heretofore. Three cardinal numbers will then be drawn, and every 128th name in the list reckoning both forwards and backwards from the first of the three, will be entitled to a memorial tazza; while every 88th name, reckoned in the same way from the second number, will be entitled to a pair of bas-reliefs, and every 64th name similarly reckoned from the third number, will have a set of etchings, in order as the names stand; with this proviso only, that if any name so determined have already gained a prize to-day, the other prize will pass to the next succeeding number.

The etchings by Mr. Radclyffe from drawings by the late David Cox form a covetable prize. They are twelve in number, and convey admirably the large style of the artist,—the truthfulness and breezy freshness of his pictures. The bas-reliefs from Milton, also, will be found very satisfactory. The artists, Mr. E. W. Wyon and Mr. Jefferson, have ably carried out the idea of the Council.

The chief prize, "The Dancing-Girl Reposing," was the result, it may be remembered, of a Competition in 1845; responded to by a large number of artists. A smaller version of the statue was produced for the Association in porcelain, and largely distributed. Reductions of other statues submitted in the Competition were also executed for the Association in the same material under the direction of the artists.

Carrying out the views which then influenced them, the Council are now offering a premium of 600*l.* for a life-size figure or group in marble, to be competed for by finished models in plaster. One year will be given for the production of the model, and another year for the execution of it in marble. The art of the sculptor demands at the hands of the Association all the aid that can be given to it. The character of the country is involved in that of its monuments. Several agencies are in operation having the advancement of the art for their object. Thus the Royal Horticultural Society, acting on a suggestion of the late Prince Consort, offer the opportunity, with some small pecuniary inducements, for an annual exhibition of sculpture,—with especial reference, perhaps, to the adornment and perfecting of gardens. An Institute of Sculptors, too, has been formed. And with reference to other departments of the art, the Society of Arts intend to give a number of premiums for works in modelling and carving; and will, probably, crown the victors publicly. Numerous important monuments are in preparation; and the Memorial of the Great Exhibition of 1851, and of its founder, Albert the Good, will be inaugurated on the 10th of June next by H.R.H. the Prince of Wales, with marks of especial honour, and with most gracious expressions of interest on the part of our revered Queen.

The Sculpture-competition proposed by your Council will be open to artists of all nations. Art is of no one country: its kingdom has no boundaries.

> "In war renown'd, in peace sublime,
> Art moves in greatness, and in grace:
> His power, subduing space and time,
> Links realm to realm, and race to race."

Leonardo da Vinci, Raffaelle, and Michelangelo, are amongst the enduring glories, not of Italy, but of the whole world.

The Art-Union of London is less thoroughly known on the Continent of Europe than it should be, and the Council are seeking to make it more so. Represented by its agents in all quarters of the globe,—from St. Petersburgh to New Zealand; from Bermuda to Hong Kong; in Barbary and Port Natal; San Francisco and New Orleans; and receiving from the United States, from Australia, and from the West Indies, alone, 1,500 subscriptions in one year,—the number, strange to say, obtained from the whole of continental Europe has never exceeded 200 in the same period of time. This can only be attributed to want of knowledge out of England of the advantages the Association offers; and this knowledge the Council are now endeavouring to supply.

Reference was just now made to the recent International Exhibition, — that wonderful collection which offered, as the laureate truly sang, from every clime,—

> "Marvels, and a feast
> Of wonder, out of West and East,
> And shapes and hues of Art divine!
> All of beauty, all of use,
> That one fair planet can produce,
> Brought from under every star,
> Blown from over every main,
> And mix'd, as life is mix'd with pain,
> The works of peace with works of war."

France sent us Ingres, Delaroche, and Ary Scheffer; Bavaria, Carl Piloty; Spain, Antonio Gistert; Belgium,

Gallait and Leys; and Norway, Tidemand, in touching pictures of the domestic life of his country.

In this peaceful tourney the artists of England must be held to have maintained an honourable position. Still it is not unlikely that what was seen of other art there may have its effect in lessening those shortcomings which are obvious in our school. Some may have been reminded that, as a German writer says,—"Art must feed on the marrow of history," and that a really noble picture, statue, or building requires in its production the heart as well as the head of a man. We want not merely what the artist sees, but what he feels. Remembering, too, how man is moulded by man, how thought induces thought, and of its kind, some may have been led to determine on working with a more fixed purpose, and have taken a resolution to rouse higher feelings than those of pleasure merely. The duty of the artist, may we be permitted to resay, is to select, to look for the excellent; to correct, so to speak, the deficiencies of marred nature, and complete the imperfect real. By keeping the best before men an advance is induced. These views, involving the importance of setting forth the "general," as opposed to the mere depiction of the "individual," have been uniformly urged in the reports of this Association from its foundation; and though altogether opposed to the doctrine of some acknowledged teachers, and for a time by a section of the British School of Art, are again, it is to be hoped, obtaining acceptance.

In conclusion, your Council, with a few condensed lines, would claim for the Art-Union of London, through which more than 300,000*l.* have now been raised and distributed, that it has sent far and wide, and into distant lands, in which the fine arts were actually unknown, examples of the best works of ancient and modern times: it has immensely contributed to the increase at home of the love and appreciation of these means of civilization, refinement, and delight; and, moreover, has helped on to fame, by the purchase of his early works and the great publicity thus and otherwise given to his name, many an artist who is now quoted as an ornament of his time and country. The Arts are bound up with the enjoyments and destinies of the human race: to assist in their progress is to do a good work.

GEORGE GODWIN,
LEWIS POCOCK,
Honorary Secretaries.

The Report having been read, the Chairman moved the adoption of it. He said, the fact that the Art-Union had gathered and distributed no less a sum than 300,000*l.* was an astounding one.

Mr. Charles Barry, who said it was his first appearance on any stage, seconded the motion; and expressed his gratification in doing so, having a feeling of interest in the Art-Union by inheritance as well as personally; his father having been one of its first committee. It was satisfactory to see they had a good balance at their bankers', as a guarantee of their future prosperity, which all could understand.

Professor Donaldson proposed a vote of thanks to Mr. Godwin and Mr. Pocock, the honorary secretaries. Thanks were due to them for the zeal and ability with which they discharged all duties. Last year a committee was appointed to arrange a testimonial to these gentlemen. As chairman of that committee, he was happy to say they already had upwards of 250 subscribers to the testimonial, and he hoped that soon the list would be very largely increased.

Mr. Dobson, A.R.A., seconded the resolution, which was carried by acclamation.

Mr. Godwin returned thanks on behalf of himself and Mr. Pocock, and expressed the great gratification they had in the performance of their duties. He then advised such as might become prizeholders, who were not themselves judges of art, to consult friends who were, before making their purchases; as, irrespective of those higher motives which ought to guide them, good pictures, by their increase in value, became good investments. An early picture by Mr. Frith, purchased by a prizeholder some years ago for 105*l.*, had recently changed hands for the sum of 750*l.* In another case, a picture, originally costing 300*l.*, brought a few years afterwards nearly as many thousands. He also referred to the advantages of education in art even in appreciation of the beauties of nature. He concluded by moving a vote of thanks to Mr. Webster for the use of the theatre, and to Mr. Wm. Smith for carrying out the arrangements.

Mr. Pocock seconded the resolution, which was carried amidst loud applause.

Mr. Wm. Smith, in the absence of Mr. Webster, returned thanks.

The President being about to leave the chair, Professor Donaldson moved that the Council be instructed to present to his Lordship some work of art issued by the Art-Union in testimony of their affectionate regard for his services.

Mr. Antrobus seconded the proposition, and it was passed by acclamation.

His Lordship briefly acknowledged the compliment, and retired; after which Professor Donaldson took the chair, and the drawing was proceeded with.

Mr. Arnold and Mr. Atkinson acted as scrutineers, and Miss Burgess and Miss Jane Hill drew the numbers.

Mr. Charles Mayhew, Mr. Bennoch, F.S.A., Mr. Thos. Grissell, F.S.A., Mr. Edward Hawkins, Mr. Butterworth, F.S.A., Mr. Henry Hayward, Mr. Isaacson, of Liverpool, and others, took part in the arrangements. And acknowledgment should be made of the efficient services, now for many years, of Thos. Simons Watson, Esq., B.A., the assistant secretary.

The following is a list of the principal prizeholders:—

Entitled to the Marble Statue of the Dancing-Girl Reposing, by W. C. Marshall, esq., R.A.—Kenning, C. L., Little Brington, Northamptonshire.

200*l.*—Porrett, R., 48, Bernard-street; Murchison, J. H., Kingston-on-Thames.

70*l.*—Anderson, Jas., Margaret-street; Henderson, T., Northumberland Wharf; Menzies, Jno., Kincardine.

75*l.*—Briggs, Lady, Brighton; Keen, J., Cradley-heath; Langdale, G. W., Beverley.

50*l.*—Cotton, J., St. Helen's; Dent, John, 34, Great James-street; Grimes, Mrs., Clarges-street; Mark, R., Winslow; Peden, M., Sydney; Robertson, W., 14, Prattstreet; Small, Dr., Boston; Spashott, H., Gray's-Inn-passage; Warwick, W. A., Cheltenham; Wickes, H. W., Bromley.

40*l.*—Cordingley, E., Atherstone; Davis, R., Newgatestreet; Dennison, W., 46, West-square, Borough; Downes, F. D., Cheltenham; Fawcett, J., Sheffield; Fisher, J.; Ludlam, J., Sheffield; Middleton, W. W., Flitcham; Parker, E. H., Newark; Rhodes, J., Ripley; Ryan, M., Clonmel; Solly, J., Tipton.

35*l.*—Cordes, C., Samarang; Grace, Master J. C., Constantinople; Knowles, A. C., Stockton; Lloyd, E. R., Stratford-road; M'Ray, W., 76, Lombard-street; Library at Marshall & Snellgrove's; Mills, J., Colton, Leeds; Pearson, W. P., Bambleton; Stewart, R., Yarmouth; Taylor, J., Chorley; Webster, W., Manchester; Whitehead, Mrs. Sarah, Ireby.

25*l.*—Barwell, W., Maze-pond; Bishop, A., Hyde-vale; Brown, R. T., Islington; Field, Mrs. E., Clapham Common; Fox, D. C., Wellington, Somerset; Hilton, T. T., Blackburn; Kitson, J., jun., Leeds; Mackrell, W. T., Wandsworth; McMullen, Mrs., Hackney; Quarmby, W., Ashton; Ramsey, Miss, Aberdeen; Raven, —, Maidstone; Rickett & Rock, Cheltenham; Roberts, E. W., 15, Fish-street-hill; Rout, W., Hobart Town; Tucker, S., Ponder's End; Thornton, H. Bradford; Wheeler, J., Charles-street; Wilson, Captain, Henrietta-street; Williams, W. P., Rugeley.

20*l.*—Alexander, T., Barcelona; Broadbridge, J., Addison-terrace; Brothers, Alf., Manchester; Bushell, W. D., Cardiff; Carr, J. G., Gelsang; Ellis, A., Hobart Town; Ellis, A., Leicester; Fytche, J. L., Louth; Francis, Col., Leeds; Gardner, Mrs. A., Glasgow; Gurney, J., Abingdon-street; Harris, J. T., Leicester; Harvey, J. L., St. John's-wood-terrace; Hilder, Geo., Rye; Jago, J., Liskeard; Kennedy, Mrs., Bridgwater; Lorimer, A. P., Willicoultry; Newton, E., 30, Fitzroy-square; Spitsbury, B., Huggin-lane; Stedman, W., West Malling; Stewart, J. R., Jedburgh; Tatham, E., Paddington; Taylor, G., Constantinople; Tidsdale, T. E., St. John, N.B.; Wilkins, E. M., Poultry.

15*l.*—Allison, W. G., Louth; Bentley, Mrs. H., Oulton; Blew, R. A., Ware; Brandon, S., Rotherhithe; Bretherton, E., Gloucester; Brown, W., Melbourne; Budd, T. W., 13, Norfolk-crescent; Church, J., Springfield; Deering, S., Adelaide; Eason, Miss, 24, Berners-street; Gatey, J., Keswick; Heywood, J., Christchurch, N.Z.; Hillman, G., Bishop Auckland; Johnson, E., Castle-street; Langford, A. T., Plymouth; McNeillidge, J., Liverpool; Miles, R., Aberdare; Moseley, F. B., Liverpool; Norman, Col., York; Pearce, G. P., Albany-street; Roberts, Sam. J., Chester; Saxby, T., Lewes; Smith, W., 82, Quadrant; Snewing, C., Euston square; Stanford, C., 377, Strand; Stanway, —, Leominster; Stephens, —, Loughborough-park; Taylor, T. G., Edinburgh; Thomson, T. P., Liverpool; Tookey, W., 48, High-street.

10*l.*—Andrews, H., Truro; Berry, W. G., Lambeth; Bingham, T. I., Dover; Bishop, A., Hyde-vale, Blackheath; Blackman, Miss, Wandsworth; Bright, E., Brighton; Brittain, F. W., Penzance; Dick, T., Otago; Gee, T. W., Ashton; Gibson, R., Geelong; Goodall, Mrs., Douglas-road; Gray, J. A., St. Ann's Bay; Hamilton, J., Belfast; Hawkes, I. G., Christchurch-street; Hill, T. W., Oswestry; Holford, R. S., per Colnaghi & Co.; Inwood, Geo., Bromsgrove; King, G. F., 55, Fenchurch-street; Knight, J., Foley; Lane, D. A., Camden Town; Lane, T., Hereford; Milnes, T., Kidderminster; Morison, J., Glasgow; Nixon, H., Liverpool; Odhams, T., *Guardian* Office; Phipps, W., Northampton; Sanderson, Mrs. A., N. Adelaide; Shipman, R., Grantham; Smith, H. A., Bishopsgate-street; Smithers, C. G., Leadenhall-street; Turner, Mrs. M. A., Bepton; Wardman, H., Leeds; Wilson, Col., Finsbury; Wolfe, Capt., Surbiton; Yeoman, Mrs., Osmotherley.

Entitled each to a Bronze Statuette of "Caractacus."—Brown, Mrs., Chartham; Curtis, —, Lille; Haddock, Capt., Hanley, Liverpool; Hainsworth, B., Huddersfield; Pack, T. H., Maidstone; Turner, H., Broad-street.

Entitled each to a Porcelain Statuette, "Go to Sleep." Adams, S., Ware; Adelaide Society of Arts; Airey, Rev. W., Keysol; Anderson, E., Mortlake; Andrews, B. T., Adelaide; Angier, M., Barcelona; Archdeacon, W. E., St. John, N.B.; Aylmer, 19a, Coleman-street; Banister, W., Morton-on-Marsh; Bannister, S.S., Tipton; Barnes, J., Brentford; Barnes, Mrs., Esher; Barnett, Mrs., Leinster-gardens; Barrow, G. E., Manchester; Bayley, R., Sheffield; Beach, J. H., Grange-road; Bedford, J., South-street, Leominster; Bell, R., 14, York-street, Portman-square; Bishop, A., Blackheath; Bonny, J., Hyde; Bowman, Mrs., Melbourne; Broadbent, S. W., Sunderland; Brookes, W. L., Whitchurch; Brown, J., Foresthill; Buckley, Miss, Eccleshall; Burden, J., Stirling; Burdock, J. B., Glasgow; Cabbell, B. B., Portland place; Cartwright, G., Holloway; Clarke, R., Monmouth; Clark-on, Jos., Birmingham; Clay, R., Portland; Coles, R., Eden-bridge; Coombs, E., Chichester; Conway, C., 95, Charlotte-street; Cooper, J., Dudley; Cope, Y. A., Pietermaritzburgh; Farrell, J., Bungay; Feather, R. B., Liverpool; Fenzi, C., Florence; Ferguson, J., per D. Bryce, Glasgow; Finlay, G. S., Edinburgh; Fleming, W., Reform-street, Dundee; Foggett, E., Blackburn; Francillon, Mrs., Cheltenham; Fuller, J., Cambridge; Gardner, J. W., South Norwood; Garland, H., Barnsley; Garner, T., Stoke Newington; Garrett, Mrs., Tamworth; Gillispie, W., Liverpool; Gleeson, E. B., Adelaide; Gorham, Mrs., Chichester; Gray, J., Sydney; Gregory, Mrs. J., Blackheath; Gross, W., Botesdale; H., Boston, U.S.; Hall, T.B., Ferry-hill; Hammon, J., Northampton-square; Harding, J., Hammersmith; Harkness, J., Birkenhead; Harrison, E. J., Birmingham; Harrison, J. Walworth; Harrop, J., Newport; Harvey, J., Bishop Stortford; Hallett, H., Ratcliffe; Heaton, R., Burslem; Hill, Mrs., Liverpool; Holt, J., Chorley; Hopcraft, G., 3, Billiter-square; Horsley, E. In addition to the above 300 parian busts of the Princess of Wales, 100 tazzas commemorative of the late Prince Consort, 150 pairs of fictile ivory bas-reliefs, and 200 books of etchings after David Cox, were distributed.

SOCIETY OF PAINTERS IN WATER-COLOURS.

THE fifty-ninth exhibition of the Society of Painters in Water-Colours differs but little in character from those that have lately preceded it; and, in the absence of anything to distinguish it, may be very fairly accepted as sustaining the proficiency of its members severally.

The observation "an average exhibition," in its application to them, must be considered in its particular relativeness, less in its generally associated meaning; for though there is a very apparent want of imaginative pictures,—always invaluable for giving vitality to interest,—the present collection comprises so much of elementary skill and extraordinary achievement of as much as has been attempted, that, where this can satisfy, cavil is out of the question. Still, to those who look for something beyond this,—some commensurate end to be attained by such means,—the possession of the power to do greater things seems to reproach the waster of it.

Long ago the capabilities of the medium for emulating the strongest effects of oil-painting have been proved, and are still asserted, even in instances where it might have been better to adhere to its idiom, so that it can scarcely be doubt of its durability that prevents the investment of thought and invention—precious enough just now—in a questionable security, or that occasions the rarity of the dramatic narrative, or embodiment of any kind of incident, in the picture production of our day. The cessation is as curious as it was sudden, and, perhaps, may be imputable to *further* rivalry of their oil-colour brethren. We wish this contention, at all events, would cease, as, by Gum!—of one sort or another—they are fighting on tolerably even ground, and the fall is certainly mutual at present.

This is to be regretted, from the effect it must have in misdirecting younger artists; and with the inclination to copyism so general as it is, it may reasonably be expected to entail neglect of intellectual culture, amongst other mischievous consequences; and it is the more to be noticed because it prevails at all our exhibitions.

Unfortunately, the few exceptions that are to be found in the Gallery are not best calculated to enforce an argument in favour of ideality in preference to the extension of it in literal imitativeness of reality. Mr. Frederick Taylor's "Hawking—the Heron brought down on the Skirts of the Village" (140), revives recollection of many a superior antecedent, and so far assists; and Mr. John Gilbert's apostrophe of Shakspeare's and Cervantes's texts hardly does more, for though displaying much of the dexterous ease with which he expresses himself, it is less successful than usual in illustrating anything else: "Don Quixote's Curious Discourse upon Arms and Letters" (18) has only furnished him with an opportunity of cleverly arranging numerous figures round a table, but, saving the Don and unmistakable Sancho, they are not so easily identified as the strongly-marked characters of the author's description would lead one to expect; the female portion, however, are pretty and ugly enough to justify all that is said of them in the story; the scene from "Twelfth Night" (29), "Malvolio washes off Gross Acquaintance," as heavy in its comedy as its colour, is not a favourable specimen of executive quality. "A Wounded Page brought home to his Father's Hall" (114), by Miss Margaret Gillies, having a story attached to it, claims a place in this brief category, too soon concluded without Mr. Duncan's appalling representation of a wreck "On the Goodwin Sands" (77), so vividly suggestive of any amount of narrative connected with such a terrible situation, and the gloomiest associations of seafaring possibilities; so, to dispel the effects of this in recollection of mighty Ocean's pleasanter phases, it may be desirable to include Mr. Alfred D. Fripp's saucy fisher-boys, if only for the sake of contrast, since the purpose of the picture consists of the lazy one for which the admirable urchins are assembled, basking on the beach, "Watching the Porpoises" (125), in blissful contempt of sun-stroke and with never a care for freckles. For the combination of academic knowledge with thorough appreciation of nature, and showing how valuable such influences are by the position to which they raise even common-place material, this is a remarkable example, and it affords an instance of faculty not being used to its best advantage.

Mr. Carl Haag has left his thirsty camels and busy Nubians at rest at their caravanserai whilst betaking himself to the City of the Dead, "Palmyra" (186). In solemn silence he notes its awfulness and desolation, and with determined industry and consummate skill conveys to others just those impressions this visit must have left with him. The immense difficulty attending such an undertaking as this would have deterred many from attempting it. Though almost panoramic in its comprehensiveness, the detail is as much elaborated as the distance from which the view is taken; and furthermore, there is a poetry in its treatment, putting aside any notion that photography would have been equally efficient in its interpretation, that likens the Syrian ruins to the bleached carcase of some giant favourite of the sun, that yet with a melancholy fondness lingers about it, and tries with warm embraces to infuse a new life into it. But whilst acknowledging the dignity of this masterpiece, and the high artistic talent manifested in its result, it must be wished that he will speedily return to life and action for future inspiration; for he is far too great as a figure draughtsman to be spared from such thin ranks without leaving a very visible gap.

The transcendent excellence of Mr. Hunt's fruit and still-life compositions is even yet sufficiently astonishing to dilate upon, although all of the same type. His fertile hand has never failed him in producing marvels from year to year. A bunch of grapes, a few berries, a bit of moss, and a bird's egg, are sufficient basis for his rhetoric: like many another orator who depends less upon what he says than how he says it, hiding the poverty of his argument in the rich clothing of his eloquence —a wonderful power, nevertheless, as any one of the ten or a dozen assertions of it here set forth will testify.

Mr. F. W. Burton does for a higher order of nature all that Mr. Hunt has done for peaches and plums, and his exquisitely beautiful idyl (239) is equally incomparable to anything of analogous aim. A child, reclining, is contemplating a spray of blossom with an earnest intensity of admiration that implies association with matters of deeper interest: the delicacy of the little lady, and the inimitably charming languor of her attitude, betokens she may be a convalescent, and perhaps she is wondering how long it will be before she can again chase the butterflies she thinks must have flitted about those pink blossoms; or perhaps it was the dearly-loved flower of some little sister playfellow, who can never, never admire it again; or, it may be, simply a study, with no intention to define such sentiment as it appears to us to be invested with;—one of those happy accidents that to genius (but only to genius) are sometimes unavoidable. At all events, we think it perfection in its way, looking at it in ours. The two other drawings, "German Lilacs" (234), and "Jostephane" (273), both show the refinement and power distinguishing him, and assist to focus the character of the exhibition. Brittany still provides Mr. J. J. Jenkins with pleasant episodes from pastoral life. "After Vespers" (131), is a very clever and agreeable drawing; but how tired that good-looking peripatetic mother must be of saying "Come along" to that pretty, slowly going, and growing child! (280) "Prayers," with its subdued colouring, is very unaffected and pleasing. The same may be said of Mr. Walter Goodall's peeps into the cottages of our own peasantry. (57) "Mother's Away," is very pretty and neatly finished. Mr. Smallfield's studies, though wanting in force, show much sound knowledge. His would-be bather "Letting 'I dare not' wait upon" ——, his wish to be in, is nicely expressed in "Shilly-shally" (210).

Of the landscapes it would be difficult to say anything but in praise. Perhaps it is from the feeling of safety with which they can rely upon those members of it that devote themselves to its delineation, for the success of their exhibitions, that the figure draughtsmen of the Society evince so little energy. Amongst those of conspicuous attractiveness, will be found Mr. George A. Fripp's fine view of (24), "The Town of Llan Ogwen, on the road from Bangor to Capel Cûrig, near the Penrhyn Slate Quarries,"—with the mountains Carneth David and Llewellyn, in the distance; a picturesque scene, but the buildings have an appearance of being out of the perpendicular from some cause or other. Mr. J. D. Harding's "Scene near the Pont du Caille, between Chambery and Annecy" (37), is a cognate example of the many preceding it, wherein the master who has made many masters was one of the first to raise "water colour" to the position it now holds. Near this is one of Mr. Paul J. Naftel's carefully elaborated and substantial drawings (34), "Low Water, Roque de Guet; in the distance Cobo Bay, Guernsey," which looks very true. The difficulty of keeping such an expanse of beach flat and retiring is admirably overcome. More admirable still is his "View, looking down on Moulin Huet Bay and the Doyle Column, Cherbourg, in the distance—Guernsey" (178). That Mr. D. Cox inherits some of his father's qualities, his "Cornfield, near Carshalton Station" (65), and Welsh Passes, quite indicate; but he has modesty to guide them, learning to walk before he attempts to run.

Mr. W. C. Smith's luminous "Sunset on the Grand Canal" (100), and "The Rialto" (84), of Mr. J. Holland, are sufficiently exponent of the glories of Venice for a season in themselves, but the pretty little bit of it, "Madonna del Saluti" (98), so cleverly moonlit by Mr. Alfred P. Newton, is much more suggestive of romance,—it might have been an inspiration from Byron, as well as his larger subjects.

All Mr. Birket Foster's contributions prove that, however fecund he is and has been, and however rapidly he works, he must have been a close watcher of Nature, and that it is no carelessness of doing the best he can do that has led him to put in circulation so many of his notes of hand. The hundreds of delicately-drawn illustrations that are so easily identified and so widely scattered, would have induced a belief that he had no taste for, or, at least, no time to think about, colour; but his *tour de force* this year annihilates any such supposition, and "The Ferry" (145), with its glowing sunset effect, places him high in the list of those who best know the use of it.

As if to indoctrinate the spectator with the specific worth of the medium as it is and as it was in contiguity with this are two emanations by the late F. O. Finch, traditional of Cozens and Girtin. A "Classic Landscape, with Figures" (150), and "An Ancient Sacrifice," are, with the rest of these drawings, forming a feature in the room, so purely characteristic of the idiomatic distinction between water and oil, that they are likely, in their provocation of comparison, to intimate that something has been lost as well as gained in confusing the application of the two vehicles.

Mr. Davidson's nice discrimination and conscientious rendering of ordinary passages may be seen to full advantage in the minutely-finished drawing "From the Church Fields, Reigate (111); the wonderful tree in this is its most notable point. A "Corn-field, Gatton Park" (134), with a pleasant path through the massive foliage that borders it, and a bright bit of sunny effect, "Near Nutfield" (60), will induce a search for more like them.

Mr. Dodgson has several characteristic landscapes, in which his observation of fact is so tempered with a feeling for poetic adaptation as to constitute a peculiarity with him; Mr. H. Brittan is well represented in his landscape and cattle combinations; and Messrs. Callow, Evans, Gastineau, Edward Goodall, Topham, Bartholomew, Branwhite, Sam Evans, Alfred Hunt, Riviere, and Rosenberg are in full force.

We reserve for the last a hearty commendation for Mr. S. Read, whose interior of "The Cathedral of Toledo" (33) is one of the attractions where all is attractive, and shows much matured power applied to excellent purpose. In fact, it is a mighty fine interior.

SOCIETY OF FEMALE ARTISTS.

THE seventh exhibition of the sisterhood of the palette and the brush, now open at 48, Pall-mall, encourages a hope that they may become firmly established in their new gallery. It shows a marked improvement upon those preceding it, and is a very interesting collection. With enough of the honourable spirit of emulation amongst themselves, there is little doubt of the steady growth and increasing importance of this institution; and, with the intention of connecting with it opportunities for study, the purchase of the lease of their present premises for a term argues that the promoters of it are really in earnest in their intention of establishing a settled position.

Of the many noteworthy productions we can mention but a few. First, in acknowledgment of their simplicity and power, the two Dalecarlian episodes by Mdlle. Amalia Lindegren, "Girl tending Cattle" (161), and "Grandmamma's Pet" (165); and next to these the very clever characterizations by Miss Kate Swift, "The Butterfly and the Bee" (169), wherein the one girl is industriously at work, whilst the other, too intent on the appreciation of her own pretty face, does nothing but wreathe flowers in her hair, or try new effects; a position of things not unknown amongst sisters. This time the race *is* to the *Swift*. These works are fully equal to anything present for technical force, though with a little inclination to general breadth at the expense of detail. The head of the poor old woman in "Saying Grace" (158) is an admirable bit of expression; but the same disregard for finish suggests that a caution is not unnecessary. Mrs. Swift's "Portrait of Miss Townley" (178), is solidly painted, and looks as if it were very like. Mrs. Backhouse has some capital little figures, and Miss Louise Rayner some equally good architectural drawings, deserving high praise. Madame Jerichau contributes some important pictures; and if our pages were not so full as they are this week of matters of art aside of architecture, we should do more than mention the names of Miss A. Burgess, Miss E. Walter, Miss Margaret Gillies, Miss Gastineau, and the Misses Claxton, whose "Scenes" on the screen must on no account be overlooked.

This gallery has been added to the list of those from which the prizeholders of the Art-Union of London may select works of art.

a

JAPANESE ORNAMENTATION.

The French have long been considered the leaders of fashion in all things pertaining to applied art. The dress which we wear should be beautiful as well as convenient; hence, fashions in dress should be fashions in applied art. Not in matters of dress only do the French lead us, but also in other branches of manufacture. From the Imperial works of Gobelins, issue articles which the world desires to imitate, and thus it sets the fashion in needlework and carpets; and in the style of our wall-papers we follow our Continental neighbours.

Although this is the case to a very great extent, we do not follow the example of the French so closely as we did twenty years back, or even ten. When in a state of infancy as regards art-knowledge, we wisely followed those in advance of ourselves; but as we gained strength we began to run alone. Recently we have, in many instances, dared to set out in new paths, and have wandered whither our inclination has led us; and we do well in trying to break those ties which have bound us to others when unable to walk. Yet, wherever any relationship has existed similar to that between mother and child, the offspring will love to adopt peculiarities of the parent, even after years of maturity have been reached.

While we are not now incapable of treading with safety in new walks of art, a feeling yet lurks within which leads us occasionally to do as those from whom our decorative art largely sprang. This proneness which we have to follow the French, leads us to write on the subject of this paper.

Anything approaching idiosyncrasy in ourselves, whereby we are led to follow in one particular walk, should be carefully watched. Giving way to this tendency we are ever apt to fall, for in pursuing the course of others we reap the disadvantage of any error in their guidance.

French ornamentists are now largely engaging themselves with the production of patterns in the style of the ornaments of China and Japan. French chintzes are now for the most part covered with forms which connect them in the mind with works of the Celestial Empire; and wall-papers are covered with summer palaces, Damios, and sacred flowers.

The chief idea which we, and our Continental neighbours also, have of Japanese art, has been derived from the works of Japan shown in the recent International Exhibition, especially from those collected by Sir R. Alcock. With Chinese art we have long had some familiarity; but valuable works brought before us at the Exhibition just referred to, have greatly increased our knowledge of its true character.

The source of the knowledge of the art which the French are now so earnestly utilizing (in a commercial point of view) has been open to us as well as to them, hence our knowledge of this branch of art should not be less than theirs. Indeed, we had greater facilities for procuring information upon these works than those who were less familiar with the English language than ourselves. So our knowledge should be greatest.

The opportunities we have had of observing Japanese ornament should enable us to form a tolerably correct judgment upon its merits. They

ANTHEMION ORNAMENTS.

should also qualify us for forming a reasonable opinion of the ornament produced in imitation of that of Japan. They should likewise enable us to say whether the spirit of the imitated ornament has been caught; whether the forms employed in the imitative productions are characteristic of the style from whence they have been derived; and, whether, above all, those forms are intelligently used which are expressive of the faith, wants, or superstitions of those who first produced them.

In many cases the French artists who have engaged themselves with recasting Japanese designs have failed to discover the purport or significance of the forms they have borrowed. They have taken the form, but have not perceived the sentiment of which the shape is but the shroud; or have copied forms and groupings without seizing the spirit of the work. Landscapes in bad perspective, houses falsely foreshadowed, quaint and meaningless figures, and impossible groups of flowers, have been set forth as so many characters in the art of the nation. Whether the art of Japan is justly represented by these things the following must answer.

A careful consideration of the art-works of China and Japan leads to the conclusion that but one style of ornament prevails in the two countries. Japanese ornament may be regarded as bearing the same relation to that of China that a dialect does to a normal language. Japanese ornament is not widely distinct from Chinese, yet it has peculiarities of its own—differences of a minor character: it is a dialect.

Just as the dialect of a language may result from a progressive change, so a deviation from a style of ornament may take place in the direction of advancement. It is even possible that an original language may degenerate while that which has arisen from it in the form of a dialect may flourish and live; so in ornament, a modification of a style may grow and flourish while the original style becomes corrupted or lost. This is Darwinism in ornament.

Japanese ornament, while a dialect of the Chinese, seems to be in a more flourishing condition than its parent. It has more vigour (perhaps owing to its relative youthfulness), and is richer in true art qualities. Without entering further into this subject at present, we shall proceed to consider more in detail the nature of the art of Japan; but with this we must associate that of China, as the ornament of the two countries is inseparably combined.

Our remarks, then, will have reference equally to the ornament of China and Japan, and we shall illustrate peculiarities common to the art in both countries by reference to the works from either; but while passing along we shall point out prevailing tendencies of the art of each country.

We have said that the Japanese patterns now so common in the French market do not faithfully set forth the style of ornament of which they are considered to be expressions. This seems to be owing to imperfect knowledge of the nature of the style of art used, or to the ornamentist giving preference to the lowest form of art found in the country, to that which issues from uncultivated minds, and is applied to the commonest articles. Objects to which this common art is affixed are much more general in China than in Japan, and from such much of that half-cast ornament must have been derived, which is now so largely used in France.

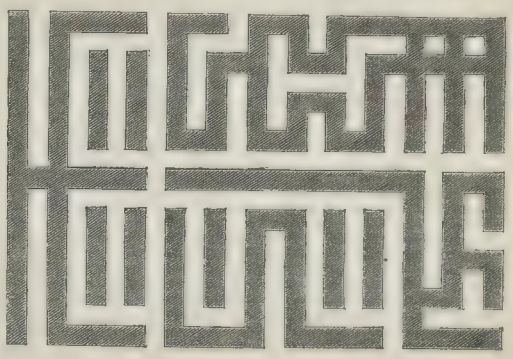
There is no poverty of rich ornamental forms in the best art-works, either of China or Japan. Shapes which are in themselves beautiful are common; flowers rendered as well-arranged ornaments, are everywhere to be met with, and skilful groupings of quaint shapes prevail.

As a well-arranged and typical ornament of China and Japan, we would instance the anthemion, which, while prevalent in the art of both countries, is most frequently found on the beautiful Claissoné vases of the Chinese, which date their

origin about one hundred or one hundred and fifty years back. Of this ornament there are scores of modifications; indeed, the number of its varieties seems endless. In some cases it consists of parts almost completely separate one from the other; in others, of members closely connected; while in other modifications it appears as intermediate between these extreme forms. Our figure, in which seven of its varieties are represented, will give an idea of what we mean.

There can be no doubt of the beauty of this ornament in some of its varieties. The shapes of the parts generally employed in its construction are beautiful, and their combination is almost invariably both ingenious and satisfactory. A difference in the material in which the ornament is wrought brings about a variation in its form. Figures 1 and 7 were wrought in brass; the forms being made out by chiselling away portions of the metal: hence their especial character. All the others were formed by a narrow riband of brass being soldered to a brazen vessel in such a manner that one edge projects, and by the interstices being filled with enamel colour. The ground is also covered with colour and raised to the level of the other work. This mode of formation will account for certain of their special features. This is the manner in which all the ornaments on the Claisoné vases are wrought.

It is interesting to notice the striking and curious similarity in structure of these anthemion ornaments of the Chinese and Japanese to ornaments of other nations. The anthemion, in a simple and pure form, is peculiarly characteristic of Greek ornament; but, with the Greeks, a greater similarity of form was preserved throughout its modifications. It also occurred in Egyptian and Assyrian ornament. In the former, however, it was of comparatively rare occurrence. We have it in Alhambra and Mediæval works also, in some of its varieties; so art, in its various developments, has been no stranger to it.



An interesting inquiry here presents itself. Has this ornament, in its modifications, arisen out of a tendency of the natural outgoings of the human mind in all ages? Has it arisen out of an intercourse between the nations who have produced it, or by the familiarity of one with the works of the other? Or, had it birth in a far-off age, when man was yet as but one family, whence it has accompanied him in his wanderings and descended in the manner of a tradition to later times? If it has resulted from a natural tendency of the human mind, it becomes invested with peculiar interest, as it must then be an embodiment of a want felt by man under widely different circumstances, and must hence point to a quality of the mind itself. If its appearance in different nations is due to an intercourse between the countries which have produced it, or to one being familiar with the art-works of the other, this ornament should point to links missing from the chain of history, and would to an extent supply them. If its appearance in all countries is due to its having birth in far-off ages, when man was as one family, its existence would furnish divines with another proof of the descent of man from common parents. While these inquiries are of deep interest, it is not within the scope of our present purpose to consider them further: their interest has caused us to allude to them, but we must do no more.

The anthemion ornament which we have observed in so many modifications of form in the art of China and Japan, would of itself lead us to suppose that the countries which produce it possess a well-considered and decided style of ornament. A form thoroughly considered, and worked into many modifications, never occurs save as a feature in a marked ornamental style. It does not exist alone, hence its existence points to the evolution, and somewhat matured unfolding of an historic style in art.

The anthemion ornament seems to be of chiefly mental origin: it is of an ideal character. The Greek form has been said to have its origin in the head of flowers of the honeysuckle; but if we are to attribute its origin to what it most resembles, we might consider the Greek anthemion to have arisen from one of the upper petals of the mignonette flower. The segments of this curiously divided organ closely correspond in form with the members of the anthemion in its purest shape, and the little basal portion corresponding with the scale from which the parts spring is frequently shown in the conventional ornament. With even this striking similarity existing between the natural object and the work of human art, it would be unwarrantable to say that the natural work gave rise to the conventional. A very careful investigation of this ornament in its varieties leads us to regard it as a purely mental

Fig. 8.

FRETS.

Fig. 9.

production. Its occurrence in Alhambra ornament, in which no form is imitative of a natural object, would strengthen this opinion.

Japanese ornament, and that of China also, is in part made up of ideal forms, and in part of natural objects, treated, possibly, in a very conventional manner. It is right, then, to notice this division of the ornaments which as a whole make up a "style" into two classes, and to consider those of each separately. The anthemion is a very characteristic ideal ornament; but there are also others which occur as frequently.

Frets and key patterns are everywhere to be found in works of Japanese art. They are as characteristic of Japanese as of Greek ornament. Here, again, we come to a singular coincidence—a coincidence more remarkable than the resemblance of the anthemions of various nations,—for we find the very frets and key patterns of common occurrence in Greek art repeated over and over again in the art works of Japan: not similar frets and key patterns merely, but precisely the same things, and these even of complicated design. So complete and full is this coincidence, that we should hesitate before saying that there are any Greek frets which have not very closely, if not exactly, anticipated Japanese ornaments. There are, however, one or two classes of frets, of frequent occurrence in Japanese ornament, which we never find produced by the Greeks; two of these we figure (figs. 8 and 9); the one (fig. 9) is very distinct, and appears in no other style of ornament. There is also a kind of fret peculiar to Chinese ornament; but this we must omit, as we can only use Chinese art to assist us to develope that of Japan. We have also found the echinus, or egg-and-tongue moulding, in a simple and somewhat rude form, in Japanese ornament; but as it is not characteristic of the style, nor of frequent occurrence, it would be pushing affinities too far to insist upon its identity with that of the Greeks and Romans. We shall continue the subject.

THE ELY LANTERN.

In commencing the lecture delivered on Tuesday, the 21st ult., in the theatre of the South Kensington Museum, by the Very Rev. the Dean of Ely, before the members of the Architectural Museum, on the subject of the Ely lantern,—

The Dean, having been introduced to the meeting, and having alluded to the absence, owing to a domestic affliction, of the President of the Society (Mr. Beresford Hope), proceeded to say, that although he had to speak upon an architectural subject, he should, being no architect, speak entirely as a layman. His only excuse for appearing in that position was, that being connected with the cathedral to which the lantern belonged, he considered it was his business to make himself acquainted with the condition of the cathedral, past and present. It was to him, of course, a subject of the greatest interest; and he knew that he had to speak to a kindly, friendly, and uncritical, even though they might be a professional audience. He should have to speak of the past history of the cathedral, of the changes which it had gone through from time to time, partly also with respect to its present condition and its future prospects, although the lecture would have chiefly to do with the Lantern,—that wonderful wooden structure, that marvellous piece of carpentery which shone above its fane. In order to know how it came into existence it was necessary to ascertain something of the origin of the cathedral. It was originally a Norman structure. It had a central tower supported by four columns: there were two transepts, which existed at the present day; and there was a Norman nave and also a Norman chancel. In the thirteenth century, Bishop Northwell, then bishop of the see, at his own expense pulled down the northern end of the cathedral and built six bays of very beautiful and elaborate Early English or First Pointed work. These have always gone by the name of the Presbytery. They were built as the shrines of Saint Etheldreda and her sisters, who are the great saints of the cathedral, and the former of whom founded the Abbey of Ely; and a further object was to accommodate the pilgrims who came to pay devotion to their shrine. The Mediæval arrangement was such that the greater portion of the choir where the stalls in which the monks sat were placed, was chiefly under the central tower. Such was the condition of the cathedral, when the accident happened, which ultimately led to the existence of the lantern. The Norman tower was in that state of old age and imbecility which Professor Willis stated was common to all Norman towers. When the Norman tower at Chichester tumbled down not long since, Professor Willis stated that it was because the habit of Norman towers generally was to tumble down. In the fourteenth century the Ely tower fell, not because it had been tampered with as the tower at Chichester was, but because the Normans were not good masons. They had a notion that thickness would do everything, which was very untrue of the head, for instance. Thickness would not compensate for the absence of brains in the head any more than for the absence of good masonry in a tower. The monks were in wholesome fear of the tower; and in order that whatever happened they might not come to grief, they very wisely said their prayers at the west end of the cathedral. That which they expected happened; for, in or about

the year 1320, the tower actually did fall. At that period the convent had amongst its members a man of most remarkable genius. His name was Alan de Walsingham, and he held the office of sacristan. He had charge of the buildings, and received the rents for the use of the convent. Before he turned his attention to architecture, he was a very clever goldsmith. He was also a very admirable architect. All the buildings which had him for their architect had an originality about them which was extremely striking. He had the genius to turn this great misfortune, namely, the tumbling down of the tower, into a great benefit. An account of what had happened and of what was subsequently done, was given in the old monkish chronicle of the time, a free translation of which he would read.

"Alan de Walsingham was made Sacrist in the year of our Lord 1321, and remained Sacrist until October 25th, 1341; in whose time many and various burdens fell upon the office of Sacrist, and especially in the very year of his appointment. For, in the night before the feast of St. Erminilda, after the Matins had been sung in the Chapel of St. Catherine (because the Convent could not venture to sing the service in the choir on account of its dangerous condition), the procession to the shrines in honour of St. Erminilda having been accomplished, and the brethren returning to the dormitory,—a few having, in fact, just got into bed, lo! on a sudden, the bell tower over the choir came down with a tremendous crash,—it seemed like the shock of an earthquake,—but no one was hurt or crushed by the fall. Another thing happened, which might be ascribed to a miracle rather than to natural causes, for in that horrible crash and enormous fall of stones, which made the whole city of Ely shake, the large and beautiful structure over the tombs of the holy Virgins, by the providence of God, and through the merits of His beloved virgin Etheldreda (as is to be hoped) was preserved from all fracture or injury, for which glory be to Christ! The aforesaid Sacrist Alan, sorrowing vehemently, and being made very sad by this most destructive and lamentable event, was altogether at his wits' end as to which way he should turn himself and how he should set to work to repair so terrible a catastrophe. But, recovering himself by degrees, and putting entire confidence in the aid of God and His most blessed Mother, and also in the merits of the most holy virgin Etheldreda, he put his hand to the work manfully. In the first place, he caused the stone and wood which had fallen to be carried, with great labour and considerable expense, out of the church; and then he cleansed the church itself with as much expedition as possible from the great quantity of dust which was in it." It was a remarkable fact that the great quantity of dust caused by the fall of the Norman tower at Chichester was a subject of surprise and comment. The chronicle proceeded: "And lastly, he ascertained and examined the ground on which he was to construct a new bell tower. Having measured out an octagon, at the angles of which he intended to raise eight stone columns to support the whole building, and under which he could afterwards place the choir, with its stalls, he carried on his excavations until he found solid and firm ground, upon which foundation of his work might safely be commenced. The eight places having been thus carefully examined as aforesaid, and stones and sand having been firmly packed in them, he at length commenced the eight columns and the rest of the stonework. This work was completed in six years, *i.e.*, A.D. 1328; and forthwith in that same year the ingenious wooden structure of the new bell tower, conceived with the most consummate and wonderful genius, was begun to be built upon the aforesaid stonework, at a very great and heavy expense, in consequence of the enormous beams which were required to connect it with the substructure; which were hard to be found; and when they were, had to be purchased at a great price." He (the Dean) could sympathize with Alan de Walsingham in that particular. For the work of restoration now being proceeded with by Mr. Gilbert Scott, great beams were required for the long buttresses. Some were got in Norfolk, some in Bedfordshire, some in Lincolnshire; and all "had to be purchased at a great price." It went on,—"These beams were brought by sea and by land to Ely; and having been worked and carved by skilful artificers, were framed together as the work required; and thus, by the help of God, the building was brought to a glorious and happy conclusion. The cost of the new bell tower during twenty years while Brother Alan de Walsingham was sacrist was 2,400*l.* 6*s.* 11*d.*" equal to 30,000*l.* or to 40,000*l.* of the present day] "of which 206*l.* 0*s.* 11*d.* was contributed in presents." Walsingham took the opportunity afforded to him by the falling of the tower, and made the new and magnificent octagonal tower, and the lantern by which it was crowned, a grand feature in the cathedral. The clear diameter of the octagon was 65 feet; of the lantern, 30 feet: the length from the floor to the centre of the lantern was 142 feet: the height of the lantern itself from the aperture to the vault was 48 feet. The lantern, which was a wooden structure, was a regular octagon: the tower on which it was suspended was an irregular octagon. Walsingham solved a problem in the fourteenth century which builders in the present day found it hard to solve. One of the most difficult things possible was to join old work to new. The chapel of St. Catherine, in Ely Cathedral, was restored about ten or fifteen years ago; but, notwithstanding that it was a small chapel, where the juncture took place there was a settlement. Walsingham, however, managed to build the tower right in the middle of old work, and there was not at this day a crack or flaw, nor was there any mark of the juncture between his work and the old Norman work. He also constructed three bays which were beautifully decorated in Second Pointed, and were exquisite specimens of Gothic work. One little remnant of the old Norman work remained at this point, namely, a pillar in the wall of the choir. Walsingham seemed to have left it, when he commenced his work, as a starting-point from which he was to begin; and it was now the oldest part of the entire structure. It was supposed that the beams which supported the lantern, and which were 60 feet long, were all one tree; but when they were lately examined it was found that they were not so. The essential structure stood upon eight upright timbers, supported by beams mortised into them, and taking their support from the stonework below. Into these were mortised other beams, so that around the lantern there was a system of numbering, altogether sixteen. He might mention that the reason for erecting a wooden structure appeared to be to avoid the repetition of the calamity which had occurred, and which it was feared would take place again, owing to the weight of a stone lantern. It might be also that Walsingham wished to exercise his genius upon a new material. At all events, the lantern was at that time unique. It was originally intended for a belfry. It contained a chamber used as a bell chamber, and it was possible it might be used as a bell chamber again. Mr. Scott had made a careful survey of the entire building, and removed all doubt as to its original purpose. There was also evidence of the fact from contemporaneous documents. In the Sacrist Rolls there was an account of the casting of the bells in the fourteenth century. They were cast by "Master John of Gloucester," and an account was given of his journeys into various countries for the purpose of obtaining clay for the moulding and tin and copper for the bells, and the items of his travelling charges were faithfully recorded. One bell was called Jesus: its weight was 3,792lb. Another was called John, 2,780lb.; another Mary, 2,198lb.; and a fourth, Walsingham, which weighed 6,204lb. Fuller, in his work, speaks of the lantern as follows: "This presenteth itself afar off to the eye of the traveller, and on all sides at great distance, not only maketh a promise, but giveth earnest of the beauty thereof. The lanthorn therein was built by Bishop Hotheim" [that is, in his time], "wherein the labour of twenty years, and five thousand ninety-four pounds eighteen shillings tenpence halfpenny farthing were expended, is a masterpiece of architecture. When the bells ring, the woodwork thereof shaketh and gapeth (no defect, but perfection of structure), and exactly chocketh into the joynts again; so that it may pass for the lively emblem of the sincere Christian, who, though he hath *motum trepidatimis*, of fear and trembling, stands firmly fixed on the basis of a true faith." Whether any architect of the present day would consider that the shaking and gaping of the woodwork was no defect of construction, or that the fact that it "chocked into the joynts again" was a thing to be admired, there was certainly room to doubt. The simile drawn, however, showed that there were "sermons in stones," and good, too. The old bell frames remained until 100 years ago, but the bells were removed, and an account of the melting down of "Walsingham" was extant. Essex submitted the building to a thorough repair, and so far as preventing it falling was concerned did his work well, but so far as beauty was concerned he entirely marred it. He shortened some windows, inserted others in the style usually known as "churchwardens' Gothic," and made various other alterations, more substantial than tasteful. During the course of the restoration now taking place, it was found that wherever the weather had got at the wood the timber had perished, but that wherever it had been properly protected it was still as perfectly sound and good as it was the day it was put up. Sir Christopher Wren was surveyor of Ely Cathedral, and he treated it to one or two enormities which remained until the present time. There was sufficient evidence afforded by a comparison of the two structures to convince him (the lecturer) that the peculiar construction of the dome of St. Paul's, which consisted of first the painted vault, then the brick cone which supported the tower and cross, and then the outer lead-covered dome, was suggested to Sir Christopher Wren by the cathedral of which he had been surveyor. The present state of the work of restoring the lantern is as follows:—The eight flying buttresses which had been removed by Essex in the course of the substantial repairs executed under his direction in the middle of the last century, had been replaced, together with a system of braces and ties which were believed to be a true reproduction of the work of Alan de Walsingham: the flying buttresses were, in fact, mortised into the very holes in the corner upright beams of the lantern which were originally cut for that purpose. These buttresses added great strength to the structure, and it was obvious upon an examination of the present condition of the lantern that it was unwise to remove the original supports without replacing them. Part of the alteration made by Essex, as he had stated, consisted in shortening the windows of the lantern, and giving the roof of the octagon, which rises to the sills of the windows, a correspondingly higher pitch: the windows are now being restored to their original length, and the roof put back again to its original pitch. Half of this roof is complete, and two of the windows are in their places. The enlargement of the windows to the original size, and the opening of the panel-work below, which was apparently closed by Essex, would add very much to the internal beauty of the cathedral. The endeavour was to replace the lantern in the condition in which Walsingham had left it. He trusted that, under the able superintendence of Mr. Gilbert Scott, the work would be completed in the course of next year. Its appearance, suspended in the air, and looking from top to bottom like a piece of lacework, would be light and beautiful. They had but one difficulty to contend with. Skilful architects and clever workmen were to be had: the difficulty was to obtain funds for the restoration. It was an expensive thing to follow in the footsteps of Alan de Walsingham; but if anything was left undone their poverty and not their will would consent to the shortcoming.

Mr. Gilbert Scott, on moving a vote of thanks to the dean, which was carried by acclamation, remarked that liberal arrangement had been made by the dean and chapter for the completion of the exterior tracery of the lantern, so that in all respects the restoration would, he hoped, be perfect.

MATERIALS AND MANUFACTURES IN THE ARCHITECTURAL EXHIBITION.*

THE Blue Lias Lime and Cement exhibited by the Keynsham Company, from their works at Keynsham, near Bath, form an important feature in the Exhibition. In the collection of specimens are some of gypsum, and of plaster, cast into ornaments, and of lithographic stone, besides a specimen of the fossil *ammonites* of the lias. The materials are exhibited in numerous applications and proportions of admixture with sand and ballast; and the tenacity of the lime and cement in joining bricks may be seen to be great, even where there are five parts of sand to one of the lime. Rough-rendering on lath is shown as executed with one part of lime or cement, and four parts of sand; floated stucco, with three parts of sand; and trowelled stucco, with the same proportions. A hard concrete, as shown, may be formed of the limestone chips, grouted with the cement. The concrete from the foundations of Chelsea Barracks, which was made from the Keynsham lime, however, is far inferior to some kinds of concrete, or at least to that which may be made with Portland cement: in fact the specimen exhibited is crumbly, and powdery, to an extent that would be quite unsuited to harbour-works. Still, we by no means think that the fault at Chelsea, is in the lime used. The cement is prepared by Captain Scott's patent, which involves the subjection of the lime, in the heated state, to the action of sulphurous acid. It sets very hard, either in

* See p. 289, *ante*.

water or exposed to the open air. Blocks, one part sand and one cement, 2 inches square in section, and with supports 3 inchesapart,—after having been made six months,—have been found to have a strength of upwards of 800 lbs. The colour is very light brown. The cost is 1s. per bushel, for a quantity above ten tons, at the works, or 1s. 3d. at Paddington.

Messrs. Nickson & Waddingham, of Manchester, exhibit their patent slate-ground for plaster-work. It consists simply of small slates attached to the quartering, or ceiling-joists, in lieu of lathing. Each slate is perforated in two places, and fixed with a narrow space separating it from the slates next to it: these perforations and spaces give the key for the plastering. The advantages claimed are incombustibility and imperishability, ease of fixing, added strength to joists, freedom from shrinkage or expansion, permanence of the even surface, and prevention of cracks. It is actually affirmed to be less in weight, as finished with plaster, than plastering with the foundation of laths; and the inventors say that repairs can be effected with peculiar ease, or without disturbing a larger space of plaster than that over which the repairs are required. Mr. J. C. Part's specimens of Martin's cement, or some of them, remain in the lobby of the North Gallery, showing different applications of this useful material, one of the specimens having been painted upon within twenty hours after it was put upon the lathing.

The late Mr. John Billing's "Terra Cotta Terminals" or "Chimney Terminations," specimens of which are shown, have been used in so large a number of public buildings and private houses, that ample evidence of their merits should be available. Little of this, however, is offered to us beyond the list of names of buildings. In the Grosvenor Hotel, Somerset House, St. Bartholomew's Hospital, the London Bridge Hotel, and the Chelsea Barracks, very great use has been made of these contrivances: the first-named building alone, has 260 of them. The idea of the improvement on chimney-pots seems to be much the same as that of the Marquis de Montagu's invention described and illustrated in one of our articles on the International Exhibition. Funnel-shaped pots, with orifices large or small, variously as required, are placed on the chimney, each one covering the top of a flue, in order to contract the flue to its proper size, and maintain the ascension of the heated smoke throughout the length of the flue, in the greatest power. By the external slope, the action of the wind tends to increase the ascensional current. Return of "back smoke" from adjacent flues, is prevented by partition-slabs separating the orifices from one another. The invention may be applied at a cost of 6s. for each flue, exclusive of scaffolds, and that of the fee for the patent and personal superintendence: for, each chimney must be adapted specially to its purpose. The total cost then comes to 14s. 6d. per flue in the case of new buildings, and 21s. in that of old. We are forced to say that in the case of one old house where the terminals were tried, the result did not satisfy.

The Bourne Valley Pottery Company, the manufacturers of "Creeke's Patent Capped Drain Pipes," of which they exhibit specimens showing the different joints and junctions, represent the pipes as being "the only perfect, simple, and really effective invention by which drains can be minutely examined at any time, obstructions removed, and cap-junctions of any size inserted (in the event of further connexions being required) without breaking a pipe or disturbing the flow of sewage;" and they fill a page of the catalogue with a further statement of "the superior advantages possessed" by the pipes. That all these advantages are confined to Creeke's pipes, however, we are not prepared to say.

The Vieille Montagne zinc, of which there are numerous specimens in the form of lucarne dressings, rain-pipes, vanes and terminals, and ornaments of many kinds, as well as models explanatory of the different arrangements in laying adapted to the obtaining a water-tight roof, seems to be steadily getting into use. Messrs. C. Devaux & Co. claim for the pure zinc, when the sheets are properly laid, a durability greater than that of lead, and an entire avoidance of repairs. But the material must be used of the proper thickness. The oxidation that would form a protecting coat in the case of the thick sheet,—then not continuing,—would simply consume the whole of the zinc, were very thin sheets used as formerly; and the defect of thickness is given by the parties interested in the use of zinc, as the reason why the mere coating to other metals in certain cases decays. In the laying, the plates must everywhere have play; and Mr. J. W. Tyler having had more than three years' experience, claims to be well able to carry into effect the methods introduced from the Continent. Messrs. Devaux & Co. have just printed a letter from Mr. Edmeston, supplementary to his original report, and to his paper read at the Institute of British Architects in January, 1860. In this letter, besides insisting on attention to the manner of laying, and to non-contact with any iron, and on the importance of good zinc, which, he remarks, may be known by its capability of bending double without cracking, he says that nothing less than 21-ounce should be used for roofs, while gutters should be 24-ounce or 26-ounce. From a report to the Académie des Sciences from the Conservatoire des Arts et Métiers of Paris, it appears that the oxydation goes on for about four years, and then hardens into the protecting coat before alluded to. According to the letter, zinc should last longer, exposed to the smoke of coal than to that of wood fires. Sea air is by no means injurious. As to the contact of lead, Mr. Edmeston has now had opportunities of seeing that this should be avoided, where there is damp, as much as should the contact of iron. The letter embodies the result of certain inquiries by Mr. Ashpitel and opinions which he obtained from some foreign architects. The zinc generally employed in Paris is of the weight of 5 kilogrammes 55 centigrammes per square mètre; or, where greater solidity is required, the weight may be one kilogramme per mètre more. The general custom is to lay it on poplar boards which are 11 to 12 centimètres in width, and are themselves laid with spaces of 2 to 3 centimètres between them. M. Baltard in the buildings of the Halles, or markets, provided a double thickness of boards, with space for a current of air between them. Mr. Edmeston is not quite correct, speaking of the Victoria Station roof, in saying "there has not been one drop of wet through that roof from the day it was completed:" the roof leaks much, and in many places; the defect is probably in the skylights; but possibility of doubt as to the fact should be removed. The decorative capabilities of the material are very great; but we are not desirous to see the valance and fringe patterns, some of which are shown in Conduit-street, in English use. The lucarne dressings are generally tasteful; but good work of art-manufacture may be bad in result through a run upon it,—making that which subordinate would be good, bad from usurpation of the sphere of other and more valuable resources of effect. Such result seems to us to have followed from a recent application of the decorations in the instance of a roof added to a house in Piccadilly, already noticed, where the openings are in two stages, and if not duplicates, much too closely resemble one another in pattern and size.

Messrs. Hayward Brothers exhibit their Union Kitchen Range, well contrived for heating a sufficient quantity of water for baths, as well as for roasting and other operations of cookery; and they also show their coal-hole plates, arranged with means of getting light, Sheringham's ventilator for admission of air, and an improved louvre ventilator which is made to act either for admission or extraction. Howarth's Archimedean Screw Ventilator, to be placed upon a roof, was described by us last year. The moveable glass ventilators of Mr. Moore are well known. Messrs. J. Moore & Sons exhibit one of their pressed-glass clock-dials, which have an opaque appearance by day, and can be illuminated at night, and may be highly ornamented by colour.

Mr. Pierce, Mr. S. E. Rosser, and Mr. D. O. Boyd, exhibit some of their different forms of heating apparatus. The success of arrangements for heating must depend in some degree upon details which would not at first attract attention; and there are points of difference in the arrangement of the gills and warming-plates now used by various manufacturers, which are considered very important in the economy of heat, and to the object of not over-heating. A fair examination of different forms of apparatus would demand a long article.

Messrs. J. Tylor & Sons exhibit a selection from their manufactures, which are all shown in their catalogue, a production of really great value for reference. Mr. Sharpe's Improvement in Closet Pans, which is shown in the North Gallery, in action, consists in formation of the rim into a tube conveying the water entirely round the upper edge, and allowing it to descend vertically from orifices which are shaped and graduated according to the requirements. The North Devon Pottery Company exhibit a Stoneware Pan-closet, in which the receiver and capsizing cup, or spoon, are made of vitrified stoneware, or glazed earthenware, and which therefore is not liable to corrode.

McAdam's pulleys for window-sashes, of porcelain or vitreous material, and the method of hanging double sashes with a siugle weight on each side the window, should be examined. The advantage claimed for the pulleys is their thorough exemption from the damp and rust through which cords may become rotten and broken. The wrought-iron water-tight casements and frames of Messrs. Burt & Potts, have now in numerous cases, undergone the desired test of years, and we believe successfully in exposed situations. Likewise specially for keeping out the wet, and for use in stone or wooden mullions, are the casements designed by Mr. George Devey and manufactured by Messrs. Gibbons & White.

The collection of locks, with explanation of the details of their manufacture, by Messrs. Hobbs & Co., is very useful and interesting. The show-case, from the International Exhibition, is so arranged as to afford, aided by the few pages "On the Application of Steam Machinery to the Manufacture of Locks and Keys," much information. At the manufactory in Arlington-street, New North-road, which would deserve a visit, all kinds of locks, and down to those which are priced about 2s., are made through the application of the machinery, of a description or quality not obtainable before the year 1851. In the Parautoptic, or Bank Lock, which costs for strong rooms 20*l.*, and for despatch-boxes 10*l.*, the same key of six "bits," can be altered 720 times; and the lock will each time of use adapt itself, so that the one lock is equivalent to 720 different locks; or, by a greater number of "bits," the changes may be extended to millions. The Protector Solid Key and Index Locks, in which the "bits," or "steps," are not changeable, are exhibited as possessing absolute security against picking by any method at present known; and they are sold at prices varying from 10s. to 40s. The Lock-Indicator is a method of locking by means of the handle without a key; and showing, by an index-finger, to what extent the bolt has been shot. For unlocking, the key is required. Messrs. Hobbs's locks, as many of our readers know, are lever-locks; and it is claimed for them that they have superseded warded locks, which are so easily opened by skeleton-keys. Locks and lock-furniture are exhibited by Messrs. Brown & Scammell, and some other manufacturers.

Perhaps even more important is the exhibition by Messrs. J. B. Newall & Co. of the electric bells in action. The invention, French (as we have before stated), must almost supersede the old form of bells in hotels, and a like class of buildings, as well as in private houses. The invention provides the means of telegraphing word what is wanted, and of receiving a reply.

Of ornamental metal-work there are three or four exhibitors. Messrs. Benhams & Froud contribute the vanes and finials such as they are able to execute from designs, and ornamental brass-work, besides lightning conductors and casement frames. Mr. H. Hunt exhibits a wrought-iron gate and pilasters, somewhat of the character of many of those of seventeenth-century date which may be found in the environs of London. The gate would be dear at its price, 170 guineas, even were it not inferior to many of the examples referred to. It proves however that its producer can execute work of the class. Some large gates exhibited by Mr. Potter also seem to us high in the price, 1,600*l.*, if not dear. The design is made up of scroll-work and foliage,—which with the frames, are hand-worked; whilst amongst the scrolls are introduced, birds and animals, executed in gun-metal, and gilt. Messrs. Hart & Son, besides some of their work in gold, silver, and brass, in the form of chalices, lamps and candlesticks, and inkstands, display the best specimens of their iron-work that we have lately seen. In a pair of gates, the scroll-ornamentation, which is of Early French character, is excellent in effect, aided by the colouring; though the birds which are partly gilt, as well as treated more prominently in colour than the general ornamentation, are less satisfactory; and it may be doubted whether the bird-forms should have been used at all. A couple of tall standards with scroll-heads, carrying a cross-pole with ornamented ends, form a contrivance from which chandeliers may be suspended; whilst the design is a clever modification of designs that are common but not the less effective.

Paperhangings and wall decorations are exhibited by Messrs. Scott, Cuthbertson, & Co. But the best works of the class are the paperhangings designed by Mr. Robinson, of Leamington, and exhibited by Messrs. Woollams. They are in the flat style of treatment, and mostly in two shades of the same colour; and whilst the forms are not imitative, or pictorial, they are the forms chiefly

of natural leaves. The course taken in such efforts, when architects are induced to make them, and the successful utilization of natural models, may show that we were right in particular views which we expressed on the subject, at a date when the principles of architectural art had been less brought to bear in decoration, than they have been during the dozen years that have since elapsed. Specimens of hall decorations, also designed by Mr. Robinson, are exhibited by Mr. T. Kershaw. The Raffaellesque or arabesque manner of decoration, for panels, extorts admiration for fanciful treatment, grace of lines and harmony of colours, and beautiful features such as the figures that are introduced; but there is an error in the sort of decoration nevertheless,—in the general scheme and principle of the scrolls and ornaments,—requiring to be palliated by every beauty that can be expressed in the human and animal forms about the scrolls or in the panels. Mr. J. L. Coulton, in his specimen, falls somewhat short of this order of excellence; whilst the important point, the graceful junction of the bodies of figures with scrolls, is not successfully attained. He can produce work greatly superior to what he here shows. The cartoons for stained glass by Messrs. Heaton, Butler, & Bayne, with drawings by them (38, 321, 375 in the general collection), deserve to be mentioned. Messrs. George Jackson & Son's Papier Mâché, in its decorative treatment at least, is still at the head of such work, as especially in the artistic quality of well-calculated and properly-telling effect of detail from the generally distant point of view. The Parquetry of Messrs. Arrowsmith needs now little that we can add in favour of its excellence. Messrs. Naylor's Stains for Deal, are intended for imitation of all kinds of wood. The stains to imitate oak, can, it is said, be combed without the ground which is usually required in the graining of old work. One gallon will cover about 80 yards, or at a cost of about three farthings per yard, without varnishing. Messrs. Bellman & Ivey's Scagliola, exhibited in four of the pedestals supporting busts in the Sculpture department of the Exhibition, is the best in the galleries, and worthy of their reputation. Some of the pedestals near these, however, and also in scagliola, are good; and those of the Serpentine Marble show as usual the beauty of that material, though not the extraordinary variety of colours, hues, and tints.

Models are exhibited of a new system of bridge construction (not for the first time) patented by Mr. Angelo Sedley, and by which it is expected that rivers and valleys may be crossed in one span, up to 1,500 feet. To show that such a dimension of span is considered possible, it is only necessary to refer to the words of Mr. Fairbairn at the meeting of the British Association in Manchester. On that occasion, the authority named is reported to have spoken,—after alluding to the tubular bridges for railways, as having spans which ten years earlier were thought beyond the reach of human skill,—of spans of 1,800 to 2,000 feet as to be bridged over safely,—allowing that these were the maximum, or from the weight of the structure itself then coming into the question. Mr. Sedley has three modifications of his system. Each of these has an oblique arrangement of the supporting chains, which carry different points in the length of the roadway from the same point of suspension. The arrangement therefore resembles slightly that of Dredge's Suspension Bridge. The modifications however are different combinations of the tubular, ordinary girder and cantilever, and suspension principles. The materials would be wood and iron; or wood, and iron and steel combined. One model shows a bridge having two spans of 500 feet each, and a central pier, whereat, if we understand rightly, would be the deepest part of the continuous girder, and the anchorage for the chains above all. For crossing 1,500 feet, the arrangement in each half of the span is that of a cantilever of four pieces in depth, of timber, corbelling as it were, and the ends of each of the lower pieces carried by inclined rods passing over saddles on the abutments to anchorage in the ground, or within the depth of the extension landward of the girder or truss itself. Half the bridge being built on each shore and run out, the halves would be united by a shoe; and the centre would be strengthened by arched flanged girders, which might be of steel for the sake of great strength with lightness. In the third model, the cantilever arrangement below the level of roadway, is replaced by a lattice arrangement above, the other portions being in principle the same. A model which was in the International Exhibition, and had a span of 17 feet 6 inches, broke with a weight of 503lb., and would have borne more but for an accident.

In commencing, in our last number, the notice of this department of the Exhibition in Conduit-street, we spoke of the difficulty which there must be in forming opinions of new materials and contrivances without the actual test of use during some period of years. We admitted, however, opinions had to be formed; or that there would be no application of science; and the practice of building, instead of increasing the comforts and happiness of the community, would stand still. But, we adverted to steps that might be taken, and deserving of the application of public money, to test the durability of materials and contrivances of many kinds. Had the specimens of stone brought together by the Commission for the selection of the material for the Houses of Parliament, been worked into mouldings and exposed at the time, about five-and-twenty years ago, in a suitable place open to the weather, and been allowed to remain to this date, we should now probably have been in a position to avoid failures in stone, mistakes of which the Houses of Parliament are not the only and not the most considerable example. Pending the adoption of such arrangements, however, and the attainment of experience, we want all the facts and results that can be supplied by dealers,—interested though they may be,—and by workmen. In short, what we want is *evidence*. Architects are so little disposed to object to novelties as such, that there is reason to complain of the facility with which certificates are given by professional men, as to their satisfaction with something that they have applied. Experiments of every kind should be regarded as necessary, and be undertaken by the manufacturers or dealers themselves; and the results, clearly stated, should be authenticated. As a rule, whether in the Architectural Exhibition, or elsewhere, we get nothing of this sort: prices even are exceptional; and a really useful list or prospectus is issued by but two or three dealers. In the pages of the Exhibition catalogue, for the department of materials and inventions, arrangement of the titles and information might be made much more serviceable than the actual arrangement is. A good reader for the press, even, might do something that is wanted. At present there is no system in placing and setting forth the names of exhibitors; in separating clearly in the page, the title of one invention from that of another; in distinguishing the assertions of dealers as their own words, and in some other matters which, if attended to, would at least facilitate reference, and conduce to the objects both of visitors and exhibitors. Numbers in the catalogue refer to none on the walls; and certain exhibitors who have taken trouble to supply titles for their individual works, in the same document, omit every means of identifying the articles themselves. Our well-known anxiety for the success of the Exhibition, and for attainment of professional objects which can be assisted by the Exhibition, must be our excuse for pressing the points referred to, on the attention of the committee.

BRITISH SCULPTORS.—HUBERT LE SŒUR.

OF kings on horseback we have *four* in London — King Charles I. at Charing-cross, King William III. in St. James's-square, King George III. in Pall-mall East, and King George IV. in Trafalgar-square. They date from 1633 to 1836. The earliest is still the best: the sculptor was Hubert Le Sœur.

To the curious account I gave of the Charing-cross statue of Charles I. in my "Handbook for London," I have nothing to add; but of Le Sœur himself I have something to tell, and that something is new.

In the MS. Warrant-book of King Charles I.'s Lord Chamberlain, Philip Herbert, Earl of Pembroke and Montgomery, I found the following entry:—

"28th January, 1632-3.—A warrant for a Chaine and a Medal of eighty pounds value, a free Gift unto Mons. Le Suer."

The chain was a present from King Charles I., and is a new fact, *now* first published in the life of that great patron of art and artists, the martyr-monarch.

And here I will ask, what is the money value of the "chain and medal" given by King George IV. to Sir Thomas Lawrence in his capacity as president of the Royal Academy of Arts, the medal worn by the late Sir Martin Archer Shee, and now most worthily worn by Sir Charles Eastlake? Was King George's gift made in imitation of King Charles's?

At Portsmouth, in a recess in a public gate, is a *gilt* bust of King Charles I., with the following inscription underneath:—

"*King Charles the First.*

After his travels through France and Spain, and having passed many dayes both by sea and land, he arrived here the 10th day of October, 1623."

This fine bust (neither Walpole nor Wornum tells us so), was the work of *our* Hubert Le Sœur. Here is a dated Crown payment to the great sculptor, confirmatory of my statement:—

"1635, June 26.—To Hubrecht le Sueur, the sum of 270*l.* for these several pieces by him made and delivered by his Maj^{ty}'s command, viz.—the image of his Maj^{ty}'s own head, in brass, for the town of Portsmouth, at the rate of 50*l.*; and one other like image, in brass, sent to Ireland, at the like rate of 50*l.*; one other of Seneca's head, in brass, at the rate of 30*l.*; the statue of Mercury, in brass, at the rate of 100*l.*; and a bust of Nero's head, in marble, at the rate of 10*l.* In all, 270*l.*"

The accounts from whence this entry is taken contain other payments to Le Sœur, in the years 1636 and 1637. Thus he received in 1636, 280*l.*, for a great statue in brass, of "Hercules holding a Child in his Arm," and for buying and bringing over "for his Majesty's use the *Mould* of the figure Laocoon."

Still later entries in May and August, 1637, record a payment of 200*l.* "for the statue of Cleopatra, in brass." Who has the Hercules? and where is the Cleopatra? Perhaps Mr. Wyatt Papworth or Mr. Watkiss Lloyd can again come to our assistance.

In a MS. roll of "extraordinary" expenditure made by Burlamachi as King Charles's agent, I found the following entry:—

"For money paid for house rent of Hubert Le Sœur at the rate of c^{li} per annum, viz., in part of one quarter ended at Lady Day, 1630, 16*l.* 15*s.*; for two years and three quarters ended at Christmas, 1632, 275*l.*, and in part of a quarter ended at Lady Day, 1633, 8*l.* 5*s.* In all 300*l.*"

Another payment, of an earlier date, and hitherto unpublished, occurs in the works accounts of the Crown, and runs as follows:—

"Hubert Levisueur, for the moulding, making, and fashioning of xii figures to stand upon the cappitulles of the pillars of King James his Hearse in Westminster Abbey,—xx^{li}."

There is an engraving of the Hearse; the statues seem well designed.

And now I have to notice another very fine work from the hand of Le Sœur unknown to Walpole and Wornum. In Wolverhampton Church, in Staffordshire, is a life-size statue, in bronze, of Admiral Richard Leveson. It is in every respect as fine as the Earl of Pembroke statue, by the same artist, in the Bodleian Gallery at Oxford. Its price, too, is known. Le Sœur's Agreement for the statue is printed in Shaw's "Staffordshire," vol. ii. p. 158, and should find a place in a new edition of Walpole's Anecdotes.

Le Sœur lived in Bartholomew-close, and I confidently attribute the bust of James Rivers, in the Church of St. Bartholomew the Great, to his hand. Rivers died in 1641. The date of Le Sœur's death is unknown.

A London fact may here fittingly find a place. The sculptor of the Charing-cross statue of Charles I., properly proud of his work, has inscribed the left hind foot of the horse with his name and the date,—"HVBERT LESVEVR. 1633." I may add that the metal ribbon on the figure of the king exhibits the hole from which the missing George was hung. PETER CUNNINGHAM.

THE NATIONAL ALBERT MEMORIAL DESIGNS.

THE Report of the Committee appointed by the Queen has been made public through the daily papers, together with a letter from Lieut.-General Grey on the part of Her Majesty, approving of the recommendation for selection of the design of Mr. Scott, "to which Her Majesty had already given the preference among the many beautiful designs submitted for her judgment."

The Report adds little to what was known before it appeared, and has been stated in our columns. Of the designs submitted, and the desirability of always applying to architects in such cases, the Committee say:—

"The ability, ingenuity, and taste displayed in all the designs are such as to prove the wisdom of the course suggested by your Majesty; and we trust that on future occasions, in questions relating even more directly and exclusively to sculpture, it will be found advisable to consult those whose studies and practice lead them to regard monumental works with reference to the site they are to occupy, and in relation to surrounding objects.

At the same time we are aware, on the one hand, that designs for statues or groups of sculpture by architects can only be required to indicate the position and dimensions of such works, leaving the sculptors themselves uncontrolled in all other respects; and, on the other, that the judgment ought not to be influenced by any defects of detail in such necessarily vague representations of sculptured forms.

In proceeding to the onerous duty of pointing out designs, one of which might, subject to your Majesty's approval, and with due modifications, be chosen for execution, we had to bear in mind the amount of the funds subscribed as compared with the estimates of the candidates."

"We are bound to state that at this moment the amount subscribed barely exceeds 60,000*l.*"

Proceeding then to point out what they conceive to be the apparently indispensable requisites next to a cost within the means, the Committee say:—

"We are of opinion that, in its general conception, the design by Mr. Philip C. Hardwick exhibits an especial attention to these requisites."

"These conditions appear to us to have been carefully borne in mind by Mr. Hardwick; and, as regards the important question of expenditure, his is the only design according to which the Memorial itself, irrespective of the Hall, could be executed at a cost within the amount subscribed."

Having thus selected (as common minds might think) one of the architects as the successful competitor, they then proceed to point out Mr. Scott's design to her Majesty's favourable notice. They say:—

"While admitting the somewhat sepulchral character of what are called Gothic Crosses, we cordially appreciate the feeling which led Mr. Scott to adopt in his design, to use his own words, 'the style . . . of the most touching monuments ever erected in this country to a Royal Consort,' and to give to an architectural structure the character of a vast shrine expressive of the value attached to the statue which it protects.

We, therefore, do not dwell on the objection, likely to be urged, of a certain want of originality in a monument of this kind, because we believe that the beauty of this example, if it could be carried into execution without sacrificing the richness and completeness of its effect, would abundantly compensate for any actual or imagined resemblance to other structures coming under the denomination of a Gothic Cross."

The cost, they fear, cannot be estimated at much less than double the amount subscribed; and to this must be added that no calculation is made for the cost of laying out the ground (in this case an indispensable addition), nor for that of straightening the public road.

"Under these circumstances we still think we are bound to submit our opinion, in the first place, as to the relative merit of the designs. That opinion, after a careful and repeated comparison of those designs, considered irrespectively of cost, is in favour of that by Mr. Scott. The difficulties which present themselves in regard to the estimate can only be met, first, by abandoning for the present the project of a hall; and, secondly, by such an addition to the present available amount as would secure the completion of Mr. Scott's monument without sacrificing its chief characteristics."

They suggest, in conclusion, that Parliament should be appealed to, to supply the required addition to this fund.

This appeal, as all know, was made; and, on the motion of Lord Palmerston, the sum of 50,000*l.* was voted, almost by acclamation, to supplement the voluntary gifts of individuals; and the National Memorial may now be considered a fact accomplished.

That this mode of dealing with the question has given any pleasure to the original subscribers we cannot state. Some of them say, not unnaturally, that as they are now to contribute share and share alike with the people who have given nothing, it might not have been unwise to wait.

THE NATIONAL ALBERT MEMORIAL.

THE acting committee of the Albert Memorial Fund met on the 29th ult., at the Mansion House. Mr. Wm. Cubitt, M.P., presided; and Mr. Alderman Wilson, Mr. Henry Cole, C.B., Mr. Godwin, Mr. Charles Hill, F.S.A., Mr. S. R. S. Goodman, and Mr. Brown were present. Mr. Goodman, the hon. secretary, reported that the total amount received up to the time of the last meeting of the committee in October last was 53,098*l.*; and from that time to the present the amount received was 1,342*l.* The total outlay for expenses was 2,073*l.*, of which 158*l.* only was for office expenses. The cost of advertisements amounted to 1,299*l.*, and the remainder was for printing and stationery. The interest derived from investment of the money amounted to 1,953*l.*, which had nearly paid the expenses. The chairman said that, as the committee were aware, seven architects had been invited to send in designs for a memorial; and if one were selected the other six were to receive 100 guineas each. Seven designs had been received, and that of Mr. G. G. Scott had been decided upon; and, consequently, in conformity with a resolution passed at a former meeting of the committee, he was going to draw six cheques for 105*l.* each, for the purpose of handing them to those gentlemen who had not been successful. More than one of those present complained that the members of the committee had not had an opportunity of seeing the designs. It ought not to be forgotten, it was rightly said, that the committee represented the body of subscribers, and would have to see the projected memorial carried out. Mr. Cubitt said that the designs had been removed within the last few days to the Royal Gallery at Westminster, and he believed that it would be advertised on the next day that they would be exhibited to the public. Some routine business was gone through, and the committee adjourned.

AMBULANCES FOR THE SICK.

THE sudden outbreak, as we may call it, of small-pox in the metropolis, is a very serious circumstance, to which the Privy Council have just called the attention of the Poor-Law Guardians, who are supposed to enforce the operation of the Vaccination Acts. New cases, their lordships state, are arising by hundreds every week within the limits of the thirty-six metropolitan unions; and the number of cases last week, it seems, was double that of the week previous. A district surgeon writes to the *Times* that "small-pox has become so prevalent that it is absolutely necessary the Government should deal with the case *instanter*." He intimates that "the Small-pox Hospital is full and cannot receive any more patients;" and he sees "people walking about in streets and courts and alleys with the disease fully developed, and propagating and extending it in all directions." He proposes that the Government should give up the Queen's Bench Prison for a temporary reception-house: it has to be pulled down afterwards; and something *must* be done. If matters go on as they do now no family will be safe from this loathsome disease. Typhus fever, too, we hear, has been raging at Battersea and elsewhere. We gave warning weeks ago.

Under such circumstances we are especially glad to notice that some of the guardians of the metropolitan parishes are seriously determined upon providing carriages or some other means for the conveyance of the sick to the hospitals, particularly those who are afflicted with contagious disorders. Several plans have been suggested for the purpose of getting rid of the use of public cabs in cases of fever, small-pox, &c. Amongst these it has been proposed to place cabs at certain of the stands for this especial purpose, marking them so that they might be easily recognized. We have made some careful inquiry on this point, and the result is, we do not think this could be made to answer as matter of business; and it therefore becomes a question as to where the considerable funds required are to come from for the support of these carriages, drivers, and horses. It has been by others thought that some enactment should be made to prevent the use of public street carriages for the conveyance of the sick entirely. This, however, would not only be very difficult to manage, but inadvisable otherwise: there are hundreds of sick with disorders not infectious who require cabs for their conveyance to the hospitals or to the residences of physicians and surgeons for advice: there are also many women carried to and fro in cabs in connexion with the lying-in hospitals. These persons would have as much objection to infected cabs, and perhaps be exposed to as much (if not more) danger from them, as those in good health. It, therefore, seems especially to rest on the parish authorities to provide sufficient means for the conveyance of those ill of small-pox, either to their own or to such hospitals as will receive cases of this description. There is a difficulty in the great distance to be traversed in some of the metropolitan unions; but we fear that there is a far greater one in the management by the door-keepers and some other workhouse authorities, who are often so jealous of exceeding their boundaries that, even in such a simple and inexpensive matter as the supply of an ambulance, they would cause delay and trouble which would not only often prevent the chance of recovery, but also cause the spread of infection.

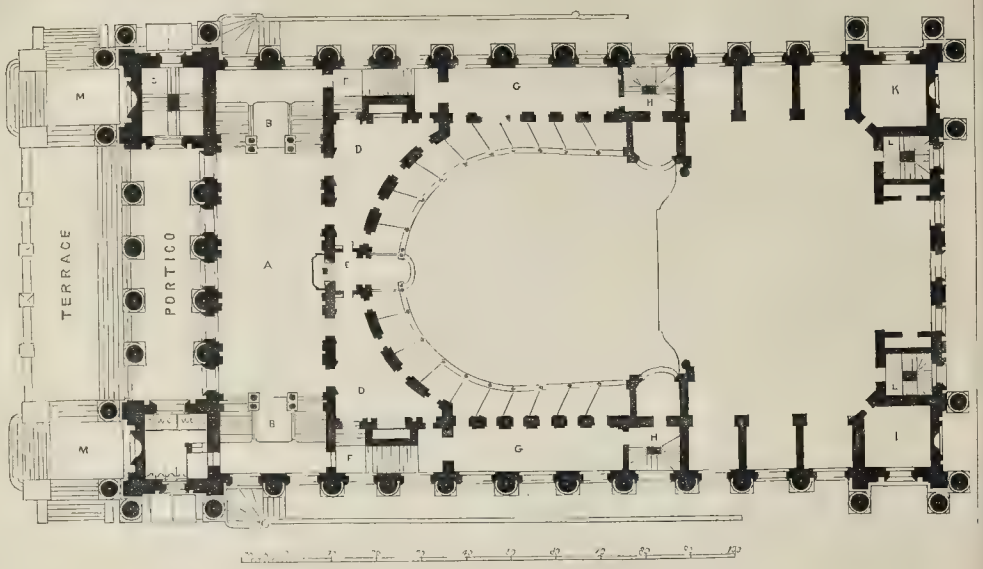
In these posts we ought to have persons of discrimination, who, when the relieving officers and perhaps the master of any of these establishments are not to be seen, should be able to discriminate in urgent cases; and give, in a cheerful, civil, and prompt manner, the information or assistance required by the poor. The other day a woman applied to one of these doorkeepers at the Shoreditch Union, for a medical order for her child who was ill of diphtheria,—a fatal complaint, now prevalent in the district: she was coolly told by Cerberus to "call again to-morrow," but by that time the child was dead. Instances of a similar kind are of far too frequent occurrence. It is a principle of workhouse management not to give the most trifling relief without investigation; and although this is, upon the whole, necessary for the purpose of protecting the ratepayers, still it is often too blindly carried out. We fear, therefore, that the provision of ambulances at the workhouses would not entirely meet what is required, unless liberal measures were adopted for their use.

It has also been proposed that the removal of the sick of infectious diseases should be made a matter of police; but we suspect that it would never do to add this to the already heavy duties of this body: it would, however, be very useful if the police were empowered to compel the masters of workhouses, in case of their refusal, to provide for the immediate removal of certified cases of fever and small-pox to those hospitals or other places to which the sick or their friends might wish their removal.

There is another plan, which would perhaps be the best of any; and which, if an agreement could be made, might be carried out at but little cost: that is, by the contribution amongst the Union authorities of a sum, in proportion to their population, for the establishment of ambulance stations at convenient points. This, however, may be far too comprehensive and reasonable an idea to be adopted; at any rate, at present.

Supposing that proper provision *were* made for the removal of such sick cases as are to be considered infectious, then the placing of such persons in street cabs might be made an indictable offence, punishable by fine. But this, we think should not be made to fall upon the cabmen; for how can they be expected to distinguish between one disorder and another? and if the punishment fell upon them, it would prevent the use of cabs in many instances when their employment was very necessary, and where there was no danger of any injurious effects.

There is a great prejudice amongst the London poor against having their sick removed to hospitals, even when they admit that it would be the best for all: there should, therefore, when an inclination is shown, be every facility given; and it would be found profitable for parishes to set about this in a liberal manner.



It may be worth while to mention here as a curious circumstance in connexion with small-pox, that an Edinburgh physician, Dr. Smart, of the Royal Infirmary there, has discovered that all unsightly pitting by small-pox is easily and completely preventible by masking or painting the face, or in women the face and neck, with a solution of indiarubber in chloroform. Gutta percha tears into ribbons and peels off, while indiarubber stretches to the movement of the features, mouth, &c.; and it can readily be renewed even if accidentally injured. Under such treatment, according to the *Scotsman*, no vestige of pitting remains, and the mask is rather comfortable than otherwise, as it prevents itching of the covered surface.

COMPETITION.

Bromley Townhall.—Seven architects were invited by the Lord of the Manor, Mr. Coles Child, to submit designs for the elevations of the above-named building; the plans having been previously decided upon, giving accommodation for a market in the basement, police-station, branch bank, Literary Institution, and Townhall. The design submitted by Mr. T. C. Sorby has been selected, and is to be carried out under his superintendence forthwith.

A FATAL BED.

IN an interesting little book, written by Miss Goodman, one of the English Sisters of Mercy who rendered good service during the Crimean war, we have an account of a deadly nook in the hospital at Scutari. This lady says: "In the midst of those struggling between life and death, as are the inhabitants of hospitals, the baneful effect of causes which render the air impure is more evident because it is sufficient to turn the balance, and to produce not merely disease, but its fatal issue. A bed in a corridor in which I worked was so situate that its occupant was near the current of a draft of impure air, which, having travelled up a passage, crossed the corridor to escape through a doorway. Of a number of

NEW OPERA HOUSE, MALTA.—*Plan.*

patients—perhaps twenty—who were assigned to this couch, none left it but for their final resting-place. It was at the end of the corridor at which I entered, so that the first face that greeted me each morning would be that of the soldier on the fated bed; then in a few days I should have to pass his lifeless body. Again, after a short interval, some new tenant would receive me cheerfully, perhaps remarking, as many of those who arrived did, how happy he felt in being from under canvas, and having a house over his head once more,—with a dash of gallantry, some may say, that it was very comfortable when a man was sick out there to see an English woman. As I stopped I used to feel unable to look the poor fellow in the face: there seemed to be in my heart a fatal secret which I was keeping from him. At length, to my great relief, the bedstead was taken away, and that part of the corridor remained unoccupied."

Deadly beds, somewhat similar to the above, may be met with in some of the hospitals and infirmaries in England even at the present day.

NEW OPERA HOUSE, MALTA.

THE new Opera House at Malta is one of several important public works for the embellishment and improvement of the island which have marked the rule of the present governor, Sir Gaspard le Marchant, Bart. It is situate at the entrance of Strada Reale, the principal street in Valletta, and has been designed by Mr. Edward M. Barry. The auditory will contain ninety private boxes, in four tiers, accommodating, with pit, stalls, and gallery, upwards of 1,200 persons. As land in Valletta is exceedingly valuable, the ground-floor of the theatre under the side corridors, and also the lower part of the terrace in front, are occupied by shops; and, according to Maltese custom, residences are provided in the building for the principal artistes. Special arrangements have been devised to withstand the heat of the climate, and fresh air will be conducted to all parts of the house. The saloon, or crush-room, is placed over the entrance-hall, and has five windows, with balconies overlooking the terrace. The painting room and the necessary workshops are in the roof, which has been designed to admit of thorough ventilation. It is constructed of queen trusses, of a span of sixty-four feet, the queen posts of which are carried up to support an attic with louvre windows and bold projecting eaves.

The decorations of the interior will be white and gold, and the lighting will be by a sun-burner, or by the mode recently introduced into the new theatres of Paris in the Place du Châtelet. The building is being constructed of the excellent stone of the island. The works in Malta are being carried on by a native contractor, under the supervision of the architect's clerk of works, Mr. J. Poulson. The carpenter's work, ironwork, stage, and decorations, are to be prepared in England, and have been entrusted to Messrs. Emmerson and Murgatroyd, of Stockport. The building is expected to be completed next year.

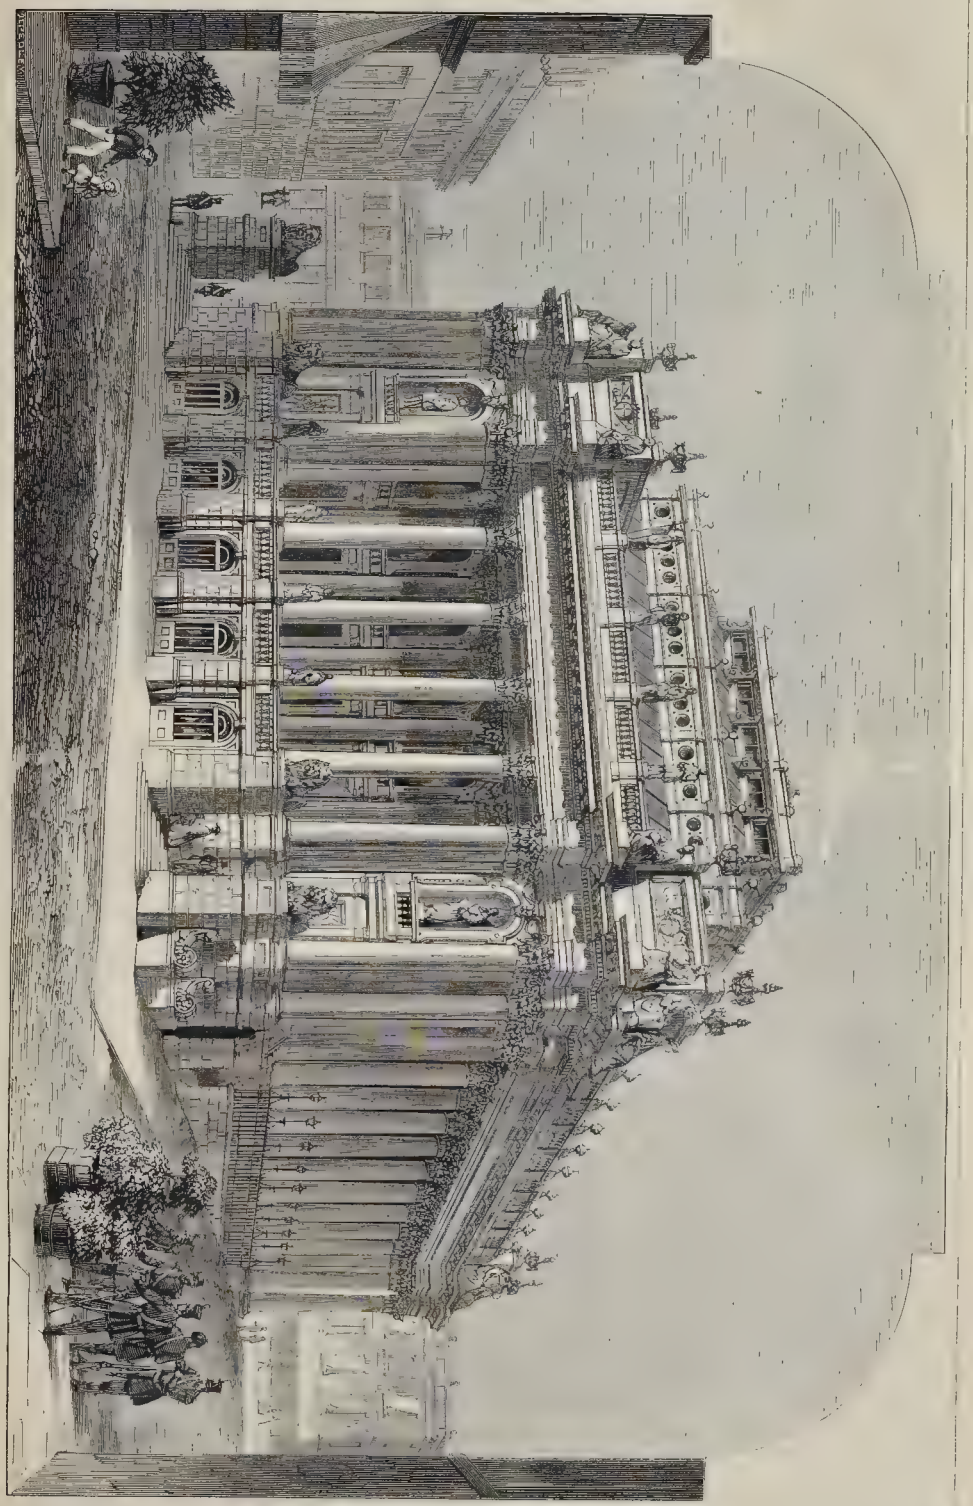
BUILDERS' BENEVOLENT INSTITUTION.

A MEETING of the committee of the Builders' Benevolent Institution was held on the 27th ult., when, amongst other business, Mr. Joseph Bird, the hon. sec. of the ball held in February last, produced his balance-sheet and accounts, by which it appeared that the net profit of the ball amounted to 119*l.* 9*s.* 6*d.*, which is carried to the Relief Fund of this excellent charity, so that, in point of fact, this agreeable union of innocent amusement and charitable intent enables the committee to support five pensioners, and must prove a pleasing reminiscence to those who attend it.



We have so often given acknowledgment to the indefatigable exertions of the hon. sec. and the stewards, through which this success is attained, that it has come to be considered by them a matter of course, and is little appreciated by them accordingly.

CHARGING OF ENTAILED ESTATES FOR RAILWAYS.

THE following is the substance of the report of the Select Committee of the House of Lords on this subject:—I. That the evidence before the committee proves that both the letting and selling value of land is in general greatly increased by its having the advantage of easy access to a railway. II. That the additional value conferred upon land by the construction of a railway is capable of being estimated by experienced land agents and valuers. III. That there is frequently great difficulty in the present state of railway affairs in raising money for the construction of a railway intended to benefit an agricultural district, unless a portion at least of the shares are taken by the owners of the land to be benefited by the line. IV. That landowners have, in consequence, become, in some cases, large subscribers to railways passing through the district in which their property lies, and would probably have contributed much more largely to these undertakings but for the obstacles opposed by the present state of the law to their raising money for the purpose. V. That it is therefore desirable to enable landowners to raise money for the purpose of taking shares in railways calculated to improve their property, on the following conditions:—1. The charge to be imposed upon land for the purpose of taking shares in a railway should be in the form of a rent-charge for a term not exceeding twenty-five years. 2. The amount of the rent-charge to be so imposed upon an estate should in no case exceed the amount of the increased annual value which the Enclosure Commissioners may be satisfied that the construction of the railway will confer upon it. 3. The amount actually paid for shares in the railway, and for the necessary expenses incurred in the transaction, should be certified to the Enclosure Commissioners before they sanction imposing upon the estate a rent-charge sufficient to pay the interest on the sum borrowed for these purposes, and also to pay off the capital in a term not exceeding twenty-five years. 4. No such rent-charge should be imposed upon land until it has been shown to the Enclosure Commissioners that the railway has been completed and open for traffic. 5. The shares so purchased should remain in the hands of the Enclosure Commissioners until the rent-charge shall have expired, when they shall be delivered to the person then entitled to the estate; and while the shares are held by the commissioners, the dividends upon them should be received by the owner of the estate.

WIMBLEDON OLD PARSONAGE.

A CORRESPONDENT, "A. B.," writes,—I see in the last number of the *Builder* a lamentation of a "Wimbledon Villager" on the supposed pulling down of the old parsonage. He may cease his sorrow, as the present owner is doing the necessary repairs to save it from the further ravages of time, and restoring some of its original features that had been plastered over. It is certainly a curious and genuine specimen of its time, and I trust may yet weather out many ages to come.

NEW OPERA HOUSE, MALTA.—Mr. E. M. Barry, A.R.A., Architect.

PLACES, SQUARES, AND TREES OF LONDON.

IT is consoling to find that the Great Globe of Leicester-square has dissolved, and left no wreck behind, save the crippled statue; and were this space, formerly so well shrubbed, a little more adorned with plantations, as it is not to be opened, the effect would be infinitely preferable to the broad arena of gravel that now occupies two-thirds of the space. This is just the spot where a judicious arrangement of shrub, tree, and flower knot would be of the greatest value: it is therefore to be hoped that the latest innovation upon English gardening, the *geometric style*, may not be here adopted. We do not want varicoloured walks or volutes to vie with the Persian shawls hung in the opposite shop windows. The repose of a well-mixed plantation, with a dozen plane trees, of ten years growth, would please the eye more, and might soon afford refreshing shade as well as ornament.

In this climate, one of the happiest for the adoption and growth of all the vegetation of the temperate zones, there is no excuse for neglect of the garden. Notwithstanding the smoke, forest trees in general attain a large size, even in the closest parts of the City, wherever the roots are unmolested by the railway or the sewers; still there is great neglect of plantation with us, as compared with those of foreign cities, where boulevards form grand features, and throw into relief the noble buildings which the growing and improving science of architecture is incessantly multiplying. Our New-road, once a noble route margined with gardens and trees, has vanished: old Brompton-row has been more recently blotted out. Now we are dazzled with the hopeful prospect of having one truly grand central promenade along the river: that ought to be consistent with its incomparable position, and to be made, as Mr. Bazalgette has agreeably shadowed forth, a credit to the City, an enjoyable resource for its pent-up inhabitants, and an atonement for Gothisms hitherto perpetrated and irremediable. There will be plenty of margin on the river's brink, the most favourable in soil and position for gigantic foresters and blooming shrubs. These, as continuations from Richmond-terrace to the Temple Gardens, might really be made the glory of London; but if any such dedication to public taste and health be really intended, rows of houses, stores, and buildings must be admitted with great discretion, and the intervening public buildings as well as Northumberland House Gardens, ought to be particularly kept in view, so as to maintain a continuity of design throughout.

As to the other extensive improvements projected for Westminster—the Abbey and the Houses of Parliament,—here, too, there is great scope for the judicious introduction of trees. There will be ample space beyond Abingdon-street, and the projected widening of King-street if the continuation of Whitehall be too gigantic an undertaking for this small nation) would offer the occasion for embellishments, terminating in the garden opposite the Abbey.

It is true that the new Foreign Office (if the King-street opening be carried out) must be withdrawn, as to frontage, full 50 feet behind the line of the Treasury; and this, too, must create an angle and break in that street, leaving 50 feet of the Downing-street end in view as a projection! What advantage will be obtained by thus widening King-street, instead of boldly grappling with the evil and removing bodily the north side of Parliament-street, it is hard to discover.

Is there any one grand thoroughfare in London without a blot? Holborn is the nighest thing to it; and yet here the poor City cannot remove the Bars, cannot bridge over the hollow! These things have been talked of for years: they may be done hereafter, if the Corporation are in good humour, or should have the coal duties continued.

Now that the public is awakened and expectant, it is devoutly to be wished, whatever great works may be accomplished, that they be done in good taste, with judgment and effect. In accomplishing the river embankment, no doubtful frugality of means to so good and great an end ought to be suffered to mar the effect, or to lose the occasion which, if misused, can never recur.

As to the improvement of squares and public gardens, there is much to be done, and great scope for the arborist and gardener: there is scarce one piece of intramural ground that can be called ornamental garden; certainly nothing like the Hyde Park borders nor the flower walk of Kensington. The noble Lincoln's-Inn-Fields, as to trees, is pretty well; so is Russell-square; but for the rest, even including the Temple Gardens and its pet flower, the wintry chrysanthemum, but little can be said in their praise: Westbourne-terrace, Oxford and Cambridge terraces, are the wretched examples we possess of hortulan taste. What we want is the stately, shady, widespreading plane, the varied shrubbery, and the bed of transplanted flowers: these, with an emerald turf, and rich sanded walks, are all that can be desired to make the English garden a place of repose and of solace.

THE COFFER-DAM AND SYPHONS FOR THE MIDDLE LEVEL DRAINAGE.

INSTITUTION OF CIVIL ENGINEERS.

AT the meeting, April 21, Mr. Hawkshaw, president, in the chair, the paper read was "Account of the Coffer-dam, the Syphons, and other Works, constructed in consequence of the failure of the St. Germain's Sluice of the Middle Level Drainage," by the president.

The St. Germain's Sluice was situate at the confluence of the Middle Level main outfall drain with the River Ouse, near the upper end of the Eau Brink Cut. This drain was made in 1847, from the designs, and under the direction, of Messrs. Walker, Burges, & Cooper. It was deepened by them in 1857, and then had, at the lower end, a bottom width of 48 feet, the side slopes being 2 to 1. The level of the bottom was 7 feet under low-water spring-tides in the river, and the rise of the tide at that point was about 19 feet at spring-tides, the cill of the sluice being 6 feet below low-water spring-tides. The bed of the drain was of soft blue clay, and the sides consisted of variable thicknesses of soft blue clay, peat, yellow clay, and surface soil.

On the 4th of May, 1862, the St. Germain's Sluice gave way, thereby admitting the tidal waters, which ebbed and flowed throughout a distance of upwards of twenty miles. A few days afterwards, the western bank of the Middle Level drain burst, about four miles from the sluice, by which 6,000 acres of land were inundated. Immediately after the failure of the sluice, the author received instructions to execute whatever works might be necessary to shut out the tidal waters, regardless of the expense. The services of Mr. J. T. Leather were secured as contractor, who was ably aided by his assistant, Mr. E. P. Smith. Mr. Alexander G. Linn was appointed resident engineer. Subsequently, after the coffer-dam was closed, finding it impossible to devote so much time to the works as he had previously done; at the author's request, the Middle Level Commissioners associated with him Mr. T. E. Harrison, who has since continued to act.

Before the author assumed the direction of the works, and directly after the failure of the sluice, an earth and cradle dam was attempted to be thrown across the drain, at about 500 yards from the fallen sluice. This was relinquished shortly after the permanent coffer-dam, of pile-work, was commenced; which the author considered was the only plan likely to be effectual, and the site finally fixed upon for which was about 880 yards from the sluice. The coffer-dam might be thus described:—Temporary piles were first screwed into the ground, upon which a staging was erected for the pile-driving engines. Two rows of sheet-piling, 25 feet apart, were then driven transversely down the slopes of the drain on each side, from the centres of the banks to within 20 feet of the bottom, leaving a central space of 88 feet of coffer-dam to be afterwards completed. In this portion of the dam the piles were placed in pairs on each side, 7 feet 6 inches apart from centre to centre, and with a space of 7 inches between each pair. The grooves thus left were for the reception of sliding panels, to be used to fill up the intervals between the several twin piles. Waling pieces of whole timbers were fixed to the inside and the outside, both at the top and as near the level of low water as possible. As the piles were driven, struts and ties were inserted, and strongly-framed raking struts were secured against the dam and against abutments of piles, backed with concrete, on the land. The panels were composed of timbers 7 inches thick, and of variable lengths, firmly bolted together, and further connected and weighted on one side by flat wrought-iron plates. In order to put these panels in place, a frame was erected, from which they were suspended, and from which they could be lowered, and raised, if necessary, by pulleys.

The rush of water through the dam was materially increased when the piles for the panels and the walings were in place; so that, at times, the difference of level between the water on the two sides of the dam was considerable. Aprons, extending the whole width of the drain, and for some distance up the slopes, were formed on both sides of the dam, of sacks of clay, and of gravel, puddle, and stone. Only sufficient stone was deposited in the centre of the dam to stiffen the the clay; but large quantities of puddle were repeatedly thrown in at slack water, most of which was washed away by the rush of water, which acquired a velocity of eight miles an hour.

The first, or lower tier of panels was 7 feet deep, and pointed at the lower end, so as to be driven into the mud. Inasmuch as they could not be driven to the same depth, the second set was so arranged as to raise the panelling to the uniform height of low-water spring tides. During these operations, sacks of clay and gravel were deposited on the inside and the outside of the dam; but, although the aprons were extended, only a few sacks of gravel remained in the inside. It now became clear that the water could only be excluded by shutting the dam at one operation. To accomplish this, the necessary panelling, which had to be 12 feet deep, was suspended from the scaffolding, so as to be dropped into place at slack-water neap tides, when the differential head for the dam to sustain was the least. On the first attempt to close the dam, three of the twin piles on the lower side gave way, releasing some of the bottom panels, after the tide had receded 3 inches, and when there was a head of 8 feet. The other panels were readily lifted and removed; and sheet-piling was then driven up to the level of the lower waling pieces, thereby filling in the spaces between the broken piles. The second attempt, which proved completely successful, was postponed until the succeeding neap-tides; when the panels were dropped into their places in twenty minutes, at low-water of ebb-tide; that time being more convenient; the difference of the head at high and low water not being considered of sufficient importance to counterbalance other advantages. After the panels were lowered, the inside of the dam was immediately filled with clay; sacks of gravel and clunch being deposited in the centre. So complete were the arrangements that the raising of the dam was kept in advance of the rise of the tide, and before high water the dam was completed; the dam not exhibiting the slightest indication of failure, or of weakness. The coffer-dam was commenced on the 16th of May, and the tidal waters were shut out on the 19th of June, 1862.

During this time the means to be adopted for the future drainage of the Middle Level received serious attention. After careful consideration, the author determined that, in addition to such drainage as could be obtained through Salter's Lode-sluice, the old outlet into the Ouse, syphon pipes should be laid over the coffer-dam. This plan of discharging water was not novel to him, having pursued it in 1839, when engaged on the Manchester, Bury, and Bolton Canal. The syphons were sixteen in number, and were laid transverely across the dam, at an inclination of 2 to 1 at the sides, and horizontally over the top. Each end was terminated by a horizontal length, containing the upper and lower valves, laid 18 inches under low-water of spring tides, the top of the syphons being 20 feet above the same level. The total length of each syphon was 150 feet. The syphons were of cast-iron, 3 feet 6 inches internal diameter, and the thickness of the metal was (excepting at the socket ends, where it was thicker,) 1¼ inch. They rested on the top of the dam, and on inclined framework, supported on piles, at the sides. Underneath the extreme ends of the syphons, sheet-piling was driven across the drain. Above the sheet-piling, the spaces between the inclined framework, to the underside of the syphons, were filled in with clunch, clay, and gravel, so as to form a solid and impervious embankment. The bottom of the dam, at the inlet and outlet of the syphons, was protected by substantial wooden aprons, extending across the drain; and a row of piles was driven on each side, inclining towards each other, and contracting the channel to a width of 60 feet, so as to keep the "wash" off the slopes of the drain. The upper or inlet valve consisted simply of a loose hanging flap of teak wood, working inwards as soon as the outward was the preponderating pressure. The lower, or outlet valve, was of cast-iron, turning on a hinge at the top, and fitted with a balance weight, which was capable of resisting an interior pressure, but could be readily released when the valve was converted into a flap opening outwards. The reason for adopting two valves was for the purpose of enabling the syphons to be put into operation, either by exhausting the air, or by filling them with water; but at present only the former method had been tried.

The syphons were put into action by exhausting the air from the inside, by an air-pump having three cylinders, each 15 inches diameter, with a length of stroke of 18 inches, worked by a 10-horse power high-pressure steam-engine. Each syphon could be shut off or be brought into operation at pleasure, by means of slidecocks, fixed on vertical pipes, communicating with a transverse horizontal pipe, in connexion with the air-pump. An overflow pipe showed when the syphons were full of water; and glass gauges were also attached to some of the syphons for the same purpose. The pipes were cast by Messrs. Cochrane & Co., and the steam-engine and air-pump were manufactured by Messrs. Easton, Amos, & Sons.

After the breach occurred it became evident that all attempts to stop it should be abandoned. The area flooded was surrounded by banks, which confined the mischief within certain limits. As soon as the coffer-dam was completed, and the tidal waters were excluded, the breach was closed, by first tipping stone to form a footing for an embankment of clay to the level of the bottom of the drain, above which a small quantity of clunch was mixed with the clay, to stiffen and weight it. The total quantity of material used to restore the bank was about 25,000 cubic yards. The bottom of the drain where the scour had taken place was also repaired, and the banks generally were put in good order. After the breach was secured the water on the inundated land was let off through the Marshland Smeeth and Fen drain and the adjoining Marshland sewer.

In conclusion, the author remarked that he believed the syphons would be found to answer all the purposes of a permanent sluice. They possessed, moreover, the advantage of not rendering the safety of a district dependent upon single pairs of gates; for it was clear that any one or more of the syphons might be damaged or destroyed without affecting the operation of the others or endangering the district.

RAILWAY MATTERS.

The great tunnel under the Crystal Palace has been completed. This is one of the most important of the works in connexion with the metropolitan extension of the railway system in that direction. The tunnel runs from Dulwich under Sydenham-hill to Penge Wood. The chief engineer was Mr. F. T. Turner. The tunnel is 2,200 yards in length: there are, moreover, seven shafts, the deepest of which is 182 feet.

The works have also been commenced at Sydenham for the purpose of placing the various termini of the London, Chatham, and Dover Company in connexion with the Crystal Palace on a level with the building; thus obviating the present serious inconvenience of ascent through corridors and stairs. The contract for the works has been taken by Messrs. Peto & Betts, and the construction is under the superintendence of Mr. Turner, the engineer of the Metropolitan Extension of the London, Chatham, and Dover Railway.

A new station and suitable waiting-rooms on the South Staffordshire line in Wednesbury have long been felt to be desiderata. The branch lines from Wednesbury to Darlaston, and from Wednesbury to Tipton, have led the directors to move the old station, and to erect in its place a range of new buildings. The passengers' station, when completed, will greatly improve the south end of the town. Its style is mixed Italian, in blue brick with white facings. A covered bridge will span the line to the centre platform, lighted at the sides with fluted plate-glass. On each platform will be waiting-rooms. There are three platforms, each 380 feet long, one for the junction on the Darlaston branch, and one for the up and down lines on the main line to Dudley and the Tipton branch. The goods station will be 200 feet long by 70 feet wide. The stations are being erected by Messrs. Branson & Murray, of Birmingham.

The traffic receipts of railways in the United Kingdom amounted, for the week ending the 11th of April, on 10,677 miles, to 548,326*l.*; and for the corresponding week of last year, on 10,237 miles, to 494,057*l.*; showing an increase of 440 miles, and of 54,269*l.* in the receipts. The gross receipts on fourteen of the principal railways amounted in the aggregate, on 7,290 miles, to 423,711*l.*; and for the corresponding week of 1862, on 7,036 miles, to 386,778*l.*, showing an increase of 254 miles, and of 36,933*l.* in the receipts. The goods and mineral traffic on these lines amounted to 216,219*l.*, and for the corresponding week of 1862 to 212,727*l.* The receipts for passengers, parcels, &c., amounted to 207,492*l.* against 174,051*l.* The traffic receipts on sixty-five other lines amounted, on 3,386 miles, to 124,615*l.*, and for the corresponding week of last year, on 3,201 miles, to 107,279*l.*; showing an increase of 185 miles, and of 17,336*l.* in the receipts. The total receipts of the past week show a decrease of 7,109*l.* as compared with those of the preceding week, ending the 4th of April.

An accident of a singular nature threatens the railway from Rome to Civita Vecchia. A subterranean flame, a sort of incipient volcano, has shown itself at Mont-des-Hictres, seven kilomètres from Rome. The flame is on the slope on the right-hand side of the railway in going from Rome to Civita Vecchia. The space occupied by the crevasses which give forth the sulphureous exhalations is about 20 mètres in length by 10 in width. In penetrating the soil to the depth of a mètre, the rock is found to be incandescent and visibly red in open day. This ignited rock is a clayey slate, rich in lignite and in fossil vegetable deposit reduced to a bituminous state.

Several Swiss journals, says the *Science pour Tous*, announce that there is a project for making a new passage through the Alps for the railway, not under Mont Cenis, but under the Simplon,—an announcement which seems ominous as regards the Mont Cenis tunnel if the railway referred to be the one so long in progress. In a conference held at Lausanne by the delegates of the Governments of the Swiss cantons it was decided, it is said, that a special commission should be appointed by the cantons of Geneva, Vaud, Friburg, and the Valais, to come to an understanding with the company which has received the concession of the Italian railway, and to consider the measures to be taken to obtain the realisation of that project. The tunnel would have a total length of 4,600 to 4,700 mètres. The rock, it is said, is easy to penetrate, and so uniform and solid that there are hopes that masonry might be dispensed with.

ALBERT MEMORIALS.

Southwark.—A stained glass window has just been erected in the north transept of St. Saviour's Church, Southwark, in memory of the Prince Consort. In an upper large circular compartment will be found the parochial seal, representing the Transfiguration, with the words, "*Sigillum commune. Sti. Salvatoris in Southwarke.*" The two lower compartments contain the arms of the Prince and Queen. Four large divisions underneath are occupied with subjects illustrative of the Prince's benevolent and devoted life:—"The care of Orphans," "Solomon inspecting Plans for the Temple," "The Scriptures read to King Josiah," "Religious Education." The whole terminates with the inscription, "To the glory of God, and to the memory of the lamented Prince Albert, Consort of Queen Victoria, this window was erected in the year of our Lord 1863." The work has been raised by the instrumentality of the Rev. S. Benson, chaplain of the parish, aided by the contributions of parishioners and others, and was executed by Messrs. Ward & Hughes.

Statues of the Prince Consort.—Mr. Noble has now in his studio clay models of three colossal statues of the Prince Consort, one in the robes of the Garter, the other two in academical gowns. The statues, when finished, are to be placed respectively in Leeds, Salford, and Manchester.

SCHOOLS OF ART.

The Cheltenham School.—The annual examination of this school has taken place. Nineteen medals have been awarded to the works of pupils. Of the drawings thus rewarded, seven have been chosen for transmission to South Kensington, there to compete for the higher distinction of national medallions. A local exhibition of the drawings took place, attracting a large number of the gentry and townspeople, the show of works being generally considered to be the best which has been made, commanding as it has done the largest award of medals ever made in Cheltenham.

The Stroud and Gloucester Schools.—An exhibition of the drawings of the students in the Stroud and Gloucester Schools has taken place in the Mutual Improvement Society rooms, and attracted a large number of visitors. The drawings shown were very meritorious, and reflected credit on the master, Mr. J. Kemp. Of the works of the Stroud pupils thirteen have received medals, and six of these have been selected for national competition. Of the Gloucester school twelve have been awarded medals, and five are marked for national competition.

The Cirencester School.—Mr. Wilde, the inspector of local art-schools, commenced his annual examinations at this school, by testing elementary classes from the Blue and Yellow Schools, the British School, and Watermoor School, in first grade free-hand drawing in outline. To these succeeded lady-pupils, in model-drawing, and in the evening the male adults underwent examinations in perspective, geometry, and orthographic projection. The works executed at the school during the past twelve months were, as usual, exhibited at the Corinium Museum, where the distinction of "medal" was affixed to them by the inspector. Twenty-seven works were selected for reward, and of these eleven were further selected for national competition.

The Newcastle-under-Lyme School.—At the annual meeting lately held, it was stated that there are 360 pupils in this school, and that the number of prizes awarded to them at the last annual examination amounted to thirty-eight, in the proportion of a prize to every nine pupils. At Newcastle, where the art-education of each pupil costs thirty shillings a-year, half this amount has to be provided by public subscription. The Newcastle people propose to erect a suitable building for their school.

MATTERS IN PARLIAMENT.

Sewage of Towns Committee.—On Monday Mr. K. Seymer moved that the analysis of evidence appended to the report of the select committee on sewage of towns in the session of 1862 be cancelled, on the ground of an irregularity in the proceeding of that committee in excluding all debatable matter from the report of the committee, and producing it all in the analysis of evidence. The hon. gentleman quoted from the report and analysis of evidence in proof of the proposition. Mr. Paget seconded the motion. Dr. Brady opposed the motion, and contended that there were three propositions which could not be controverted;—Firstly, that the agricultural interest suffered from the want of good manure; secondly, that that want had been partially supplied by artificial manure; and, thirdly, that it was not for the interest of the trade that any change in the present system should take place. The hon. gentleman then proceeded to criticise the report of the Royal commission, and remarked especially upon that part which alluded to the unknown process of applying manure all the year round. Mr. Ayrton supported the motion. Sir G. Grey thought that there was some mistake in the manner in which the hon. member for Leitrim embodied his views on the report, and recommended the analysis to be cancelled. Dr. Brady consented to withdraw the analysis. The motion was agreed to.

The proposed Market in Leicester-square.—On Monday in Mr. Adderley's committee on the proposed Regent market, in Leicester-square, Mr. E. Saunders, the architect, was examined. The intended structure, projected by Mr. J. L. Taberner, would be an ornamental Crystal Palace structure, built of iron and glass, and surmounted by cupolas, having a southern façade of 300 feet, and another of 370 feet, intersected by eight commodious avenues, divided into appropriate compartments for the sale of fruit, flowers, and other commodities. The case for the promoters having closed, that of the opposition, on the part of the Metropolitan Board of Works and the vestry of St. Martin's, was opened by Mr. Phinn, Q.C., the committee deciding that the parish of St. James, Westminster, and the Marquis of Salisbury were not entitled to a *locus standi*. Mr. Goddard, of the Metropolitan Board of Works, was examined.

On Tuesday the case in opposition to the Bill was opened on behalf of the Metropolitan Board of Works, the parish authorities of St. Martin's-in-the-Fields, and on behalf of 110 of the inhabitants, shopkeepers, and residents in Leicester-square and its vicinity, on the ground that the proposed market, if carried out, would cause inconvenience to the inhabitants of the square and to the locality, as an open space and public thoroughfare. The proposed market would tend to diminish the present respectability of the neighbourhood. Those who professed to claim the freehold had no legal title to it or to sell it, the Court of Chancery having in 1787 decreed the area called Leicester-square a garden or pleasure-ground, and that it should be so kept by the Tulk family for ever afterwards at their own sole cost.

A meeting of the inhabitants of Leicester-square has been held at the Savile Palace, in Leicester-square, for the purpose of considering the Bill before Parliament for appropriating the square as a market. General Sir de Lacy Evans presided. Mr. Marshall, churchwarden of St. Martin's,

moved a resolution, which was carried, to the effect that, from past experience, markets were commercial failures, and tended to depreciate the surrounding property; that the proposed market was uncalled for and unnecessary; and that the Bill should be opposed. Mr. Bidgood strongly urged upon the inhabitants the necessity of preserving the square as an open space. He referred to the vast outlay recently expended in opening the approaches to the west through the new street from Covent Garden and Cranbourn-street, and urged that the proposed market, if successful, would, from the traffic anticipated, render nugatory the outlay expended. It was also resolved that the committee be requested to continue their exertions to keep the open space, and that the funds raised and to be raised be applied in opposing the Bill to appropriate the square as a market.

Since this was in type the committee have thrown out the Bill.

The New Street from Blackfriars Bridge to the Mansion House.—The select committee appointed to consider the question of a new street from Blackfriars Bridge to the Mansion House have passed the preamble of the Bill, and agreed to the main clauses.

PROVINCIAL NEWS.

Norwich.—The St. Andrew's Hall restoration committee have reported to the city council that in answer to advertisements nine tenders were received, three of them for doing the entire work, and six for doing portions of the work only; that it was deemed advisable the whole works should be under the control of one contractor, and they therefore recommended the council to accept the tender, being the lowest sent in, by Mr. J. W. Lacey, for doing the whole of the works at the sum of 2,870*l.* This recommendation was agreed to by the council. About 1,500*l.* will have to be subscribed by the city and county to aid in carrying out the restorations, the rest being met by funds in the hands of the corporation.

Kingston.—Considerable alterations and additions have been recently made to the Militia Barracks in this town. A new guard-room, additional stores, quarters for the serjeant-major, and a detached hospital, have been built, and a parade-ground, measuring about 500 feet by 300 feet enclosed. The whole of the works have been executed by Mr. Sims, of Richmond, under the direction of the architect, Mr. C. H. Howell, of Lancaster-place.

Deal.—This town, in a few months, it is said, will again be provided with a landing-pier, to which steamers may draw and passengers land, and which will also improve the general aspect of the town. The ceremony of driving the first pile, or rather of embedding the first column in concrete, has just taken place.

Chester.—The taking down and rebuilding of the Royal Hotel will shortly be commenced. The tender of Mr. T. Hughes, builder, Aldford, has been accepted for the work, it being the lowest of the three tenders to which the number sent in were reduced. The following were the tenders sent in:—R. Bellis, Chester, 20,300*l.*; Clarke & Jones, Manchester, 18,391*l.*; Niell, Chester, 17,632*l.*; B. & O. Owens, Chester, 17,091*l.*; J. Roberts, Chester, 16,992; T. Hughes, Aldford, 16,957*l.* 17*s.*

Edinburgh.—The foundation stone of the new Edinburgh Magdalene Asylum, at Dalry, has been laid by the Lord Provost. The plans for the building were prepared by Messrs. Leadbetter & Smith, of Edinburgh. The style of the building is the old Scotch baronial, but as the funds of the institution are limited, it has been kept very plain. The entrance-hall and staircase are situate in the centre of the ground-floor, from which passages, 6 feet wide, run right and left, communicating with the apartments, &c. There are in all six dormitories, in which sixty-three beds can be erected. "The thorough ventilation of all the large rooms and dormitories," says the *Scotsman*, "is secured by a simple but efficient method. It has been the aim of the architect to render the working and management of the house as simple and easy as possible, and for that purpose all the work will be done on the ground-floor; and for supervision the matron's business parlour is placed between the sewing-room and laundry, with a door opening into each." The contractors for the work are:—Messrs. A. Dryden, mason; R. Henderson, wright; J. Grieve, plasterer; A. M. Peters, plumber; and A. Slater, slater.

Elgin.—The city improvements, says a local paper, proceed without intermission. Two large mansions have been contracted for: one, in the old Baronial or Scotch style, with castellated towers and pinnacles, is to be erected for Mr. A. Lawson, Oldmills, on a commanding and beautiful site opposite the "Conet Hill." Another house is to be erected on the south-east end of Guildry-street, by Mr. M'Intosh, clothier. This villa is to contain all modern improvements and accommodations. The contractors are Messrs. Macdonald & Gerrie, builders; Anderson, carpenter; Findlay, slater; Proctor, plasterer; and Hunter, plumber. The first-named mansion is from a design by Messrs. Reid & Mackenzie, architects; and the latter by Mr. Petrie, architect, both of Elgin.

Inverness.—Part of the works of the new street, says the *Elgin Courier*, are now contracted for: these are the Academy-street part, which consists of six shops. The contractors are:—for the mason's work, Messrs. Cumming & Ellice; carpenter's work, D. Munro; blacksmith's work, W. Smith, founder; plasterer's work, Duffus; plumber's work, Logan & Thompson; slater's work, Russell. The members of the 1st U. P. congregation are to build a church. The section of the work on Church-street will soon be contracted for. The demand for the shops and other tenements is immense, and they are let at very high rents. These improvements have also prompted the members of St. John's Episcopal Church to determine on finishing the spire of that building. Nor are other points of the town awanting as to improvements. The extension of the Station Hotel is now well-nigh complete. The workmen are busy at the new engine-house at the railway station. The Territorial Mission Church is being proceeded with.

STAINED GLASS.

Watford Church.—A memorial window has been placed in the north aisle of this church to the memory of some officers who were killed during the Indian mutiny. The window is from a design by Messrs. Lavers & Barraud. The larger figures represent David and Joshua,—as two of the most celebrated warriors in Old Testament history. The smaller compartments contain illustrations from the life of David,—his triumphant return after slaying Goliah, and the incident of his sparing the life of Saul when he was in the cave at Engedi. The one is supposed to illustrate the lawfulness of war, and the other the unlawfulness of treachery. The window bears the following inscription:—"To the Glory of God, and in memory of Lieutenant-colonel James Pratt, Lieutenant-colonel Charles Chester, Captain James Fagan, Captain Thomas H. Hillind,—all of the 23rd regiment of Bengal Native Infantry, who fell in the mutiny and rebellion in India, A.D. 1857. Erected by their brother officers." The west window of the church is very much defaced: its stone mullions and tracery have been replaced by woodwork, and part of the window is blocked up by brickwork: it is proposed to restore it, with a design in commemoration of the recent marriage of the Prince of Wales. A voluntary subscription has been set on foot in order to raise 150 guineas for this purpose.

Shottesbrook Church (*Maidenhead*).—A large stained-glass window has just been placed in Shottesbrook Church, as a memorial of the late Captain Nicholas Vansittart, of her Majesty's ship *Magicienne*, who died of wounds received at the storming of the Taku forts in China. The window has been erected by his brother officers, as a token of the esteem in which they held him. The design is "The Ascension," by Messrs. Hardman, of Birmingham, and the window has been fitted in by Messrs. Allwright, plumbers, &c., of Knowl-hill. We believe the cost will be between 300*l.* and 400*l.*

Sowerby Church.—A stained-glass window has been inserted at the end of the north transept of this church, as a memorial to several members of the Cayley family, who have resided in the parish of Sowerby, near Thirsk, for a great number of years. The window, which is in the Norman style, is composed of three separate lights. The stained glass has been presented by Mrs. Favell, of Derwent Lodge, Keswick. The artists were Messrs. Warrington & Sons, of London.

Armagh Cathedral.—A competition was called for a painted glass window to be placed in Armagh Cathedral to the memory of the late primate. Messrs. Hardman, Clayton & Bell, O'Connor, and Lavers & Barraud, were invited, and the latter are the successful competitors. It may not be generally known that the late archbishop, at great cost, restored much of the cathedral; and this fact has greatly influenced the artists in preparing the design. The tracery represents our Lord in glory, attended by beatified saints. The first tier in the three lower lights illustrates the Dedication of the Temple by Solomon; the middle tier, its restoration under Ezra and Nehemiah; and the bottom tier represents in the centre opening the mission of St. Columba to Ireland; the left-hand side the founding of the cathedral by St. Patrick; and on the right the late primate with plans before him for its restoration, and handing a bag of money for that purpose.

CHURCH-BUILDING NEWS.

Taunton (*Somerset*).—The new church of St. John the Evangelist, just completed at Taunton, and which has been erected at the sole cost of the Rev. F. J. Smith, has been consecrated by the bishop of the diocese. The church, which is situate near to the new shirehall, has been built from a design by Mr. Scott, in the Early Decorated style; the builder being Mr. H. Davis, of Taunton. The seats are open and entirely free, and there are sittings for about 600 persons. The stone employed in the structure is Westleigh stone, with dressings of Ham Hill, Bath, and Bishop's Lydeard red sandstone; and the roof is covered with ornamental tiles. The church consists of a nave and north and south aisles, with chancel, north chapel, and organ space. The length of the building, from the chancel to the western door, is 110 feet, and the extreme width of the interior is 56 feet. The shafts of the chancel arch are of polished Devonshire marble, and the labels terminate with heads of the apostles Peter and Paul. The shafts of the chantry arch are of Devonshire marble, the capitals being symbolical representations of the holy Eucharist. The north and south aisles are separated from the nave by four bays, the arches of which are constructed alternately of Bath and Ham stone, the labels being of red sandstone, and the shafts are sculptured. The terminations of the labels are stopped with foliage and representations of human heads of singular expressions. On the last capital of the southern side of the nave, and close to the western door, is a dove bearing an olive-branch in its mouth. Close to this the font is situate, and the idea which the sculptures intend to convey is that the church of Christ is to be entered by baptism. The roof of the nave is open timbered, varnished, and the interstices of the rafters are stuccoed and decorated; and the corbels supporting the principals are ornamented with foliage. The eastern or chancel window is of three lights, the shafts Devonshire marble with foliated capitals. The aisle windows have red sandstone shafts, with labels of ornamented stone, terminating with bases, and are pierced with trefoils and quatrefoils. The western window is a three-light. It has, like the eastern window, Devon marble shafts: the capitals are carved, and the labels terminate with the head of the queen on the right and that of a bishop on the left, thus representing the union which subsists between the Church and State. The eastern window has been painted by Messrs. Minton & Powel, and represents subjects in the life of Christ. In the eastern window, painted by the same firm, is a representation of the Transfiguration, and on the top three small angels in compartments. The pulpit is principally of Ham Hill stone. The materials of the porch alternate with Ham Hill, Bishop's Lydeard, and and Bath stone. In the apex of the arch is a corbel in Bishop's Lydeard stone, supporting a figure of St. John the Evangelist, the emblematic eagle being at his feet in an ornamental niche supported by carved capitals. At the western end of the aisles are two two-light windows. The sedilia are composed of alabaster and Caen stone, with shafts of Cornish serpentine, with foliated capitals and carved bases. The reredos is composed of a centre arch with two smaller arches on either side. The centre arch is diapered, and in the centre is the sacred monogram, composed of the letters "I. H. S.," the whole illuminated with blue, gold, and red. The floors of the chancel and aisles are laid with encaustic tiles, in pattern. The tower, which is intended for an organ, has two arches, the corbels of which are carved in the Columbine style of foliage. The seats of the church are all of pitch pine varnished, open, low backed, and are calculated to accommodate about 650 persons. The tower is 80 feet high, and from it rises a spire of about the same height. The tower springs from a massive base, and has two tiers of windows with foliated capitals, the labels terminating with bosses. Above is another tier of sunk diapered carving. At the angles of the tower, near the point from which the spire rises, are four niches, in which are placed colossal statues of the four evangelists. The entire carving of the building

has been executed by Mr. Herley. The spire is constructed of Ham stone, and is perforated with storm lights. We are indebted to the *Taunton Courier* for these particulars. The total cost of the edifice has, we hear, been about 9,000*l.*

Aberdare.—The old churchyard having been closed for interments for some time, application was made to the Ecclesiastical Commissioners for a new site. One has been obtained in Maesydre, and the following tenders for the erection of a new church were submitted for consideration:—Mr. P. Rees, 2,797*l.*; Mr. D. Richards, Aberdare, 3,837*l.*; Messrs. James & Price, Cardiff, 4,014*l.*; Mr. Williams, Llandaff, 4,200*l.* The several tenders were referred to a committee for consideration.

Llanbedr.—The chief stone of a new church was laid here on the 31st ult. The church, which is dedicated to St. Peter, will seat about 200 persons. On plan it consists of a nave 48 feet by 22 feet, chancel 15 feet by 28 feet 6 inches, with polygonal apse, organ chamber, vestry, south porch, and bell tower, which rises to a height of 60 feet on the south front. The style is Early Decorated, Continentally treated, the coloured stones, with which the locality abounds, being freely used in the arches, shaft-bands, &c., throughout the church. Internally, the building will be open-timbered to the ridge, and plastered between the rafters. The pewing will be open throughout, simply varnished; the chancel roof of panelled work. It is proposed to fill in the whole of the windows with stained glass, and lay the chancel and aisles with encaustic tiles. The architects are Messrs. Poundley & Walker, the contract being taken by Mr. James Porteus, of Welshpool, builder.

Castle Caereinion.—The foundation-stone of the new church now in the course of erection in this parish has been laid. The necessity of building the new church upon the old site made the removal of the old building imperative. The church will be built in the Rustic Gothic style, with lancet windows, and will consist of a nave, chancel, vestry, tower, and spire. The dimensions of the nave will be 49 feet by 24 feet 6 inches; the chancel 22 feet by 15 feet. The tower and spire will be 100 feet high. The edifice will be built with Welshpool stone, with a layer of bricks inside to prevent damp. The roof will be open-timbered, with plaster between the rafters. The internal fitting-up will be on the open-pew system, and is calculated to accommodate 220 persons. The church is dedicated to St. Germanus. The architect is Mr. T. H. Wyatt, of London; and the contractors are Messrs. Chester & Son, of Liverpool. The entire contract is for 1,680*l.*, which, with architect, will amount to about 1,800*l.* It is not intended immediately to proceed with the spire. The amount of the present contract is 1,430*l.*

Liverpool.—We are requested to explain that the statement quoted from a Liverpool paper, that "Mr. Wortley, engineer, has had the superintendence of the laying out of the grounds" at the Anfield Park Cemetery is incorrect, the whole of the works excepting those belonging to the building department having been carried out from the designs of Mr. Edward Kemp, and under his superintendence; Mr. Wortley having acted solely as his clerk of the works.

Birmingham.—The Town Council has, after a long and warm debate, voted a sum of 800*l.* for building a Roman Catholic chapel in the Borough Cemetery, by a majority of 24 against 21.

Oxford.—St. Aldate's Church, Oxford, after having undergone extensive alterations and improvements, has been re-opened for divine service. The restoration which has just been brought to completion, remarks the local *Journal*, had for some years been considered a most desirable object. It was resolved to enlarge and entirely reseat the building, so as to obtain 274 additional seats, and to devote the whole of the increased accommodation to the poor, for whom scarcely any provision had previously existed. The erection of parish schools, on an enlarged scale, was included in the prospectus; but, although the site has been purchased, this portion of the plan has been for the present deferred. The two undertakings would, it was estimated, require about 4,600*l.*, but the restoration of the church alone involves a cost of but little under 4,000*l.* Mr. J. C. Christopher, of London, the rector's cousin, furnished the plans, and the work was intrusted to Mr. J. C. Curtis, of Oxford, builder. The most prominent improvement is the enlargement of the aisles, both of which have been thrown out about 24 feet to the east. The south aisle, which is believed to have originally been a separate chapel in connexion with Pembroke College, was partially shut off from the nave by a wall. This has been removed. The tracery of part of the east window of this aisle has been retained. The roof of the nave is entirely new, as well as that of some other portions of the edifice. The arches rest on columns of Aberdeen granite, similar to those in the New Church of St. Philip and St. James, and the gaslights are arranged on coronals round the tops of these columns. The pulpit (given jointly by Mr. H. Grant and the architect) is of Caen stone and five-sided, the letters "I. H. S." being chiselled in the centre, and vine and other fruit leaves, &c., sculptured on the remaining sides. These, as well as the foliage and other ornamentations, have been executed by an artisan named Beate, whose skill has been in request at St. Mary's Church and other of the collegiate buildings. Two ranges of low pews run the whole length of the nave and aisles, so that the church now contains 800 sittings, nearly 300 free. The building will be warmed by hot-water-pipes, which have been fixed under iron gratings in the floor. The entire structure has undergone repair. The churchyard has been lowered, re-turfed, and planted, and the railings re-fixed just above the level of the street. The church is not yet entirely finished, the capitals, &c. having yet to be sculptured, and some other work to be done.

Bicester.—The old parish church of Bicester, which was in a very dilapidated condition, has undergone a restoration. The roof has been stripped and nearly all made new. The windows and tracery of the windows have been restored, and in several places made new. Four galleries were pulled down, and the vestry has been thrown open to the church. The pews have been replaced by open sittings. The outside of the church tower and chancel has been pointed with dark cement, showing the courses of the stonework. The chancel has also been roofed anew, and new windows put in. A new organ has been built expressly for the church, at a cost of 200*l.*, by Messrs. Gray & Davison, of London. A large five-light memorial window is being erected in the chancel, the gift of Mrs. Fryer, in memory of Sir Gregory Osborn Page Turner, Bart. The subject is the Ascension, and the artists are Messrs. Cox & Son, of London. The restorations have been carried out by Messrs. Fassnidge & Son, builders, Uxbridge, from designs prepared by Mr. Beesley. The entire cost will amount to little short of 3,000*l.* The edifice has been re-opened.

Hinckley (*Leicestershire*).—The Parish church has been opened for divine service after the restoration of the windows and chancel. The chancel was in a most ruinous and dilapidated state. The east window (early English) was in many places almost entirely gone. In the upper part of this window were some pieces of stained glass, irregularly placed, and apparently of great antiquity. From some peculiarities of colour and construction, they are stated by Mr. Evans to be of the period of the battle of Bosworth field. The four side windows were in a little better condition. The window is now re-filled with stained glass, of geometric pattern, the colour being of the deepest tone, with a figure in the centre light of Our Saviour "as the Man of Sorrows." The four side windows are of cathedral glass, with coloured coves and circular medallions of colour in the different compartments. Mr. Sebastian Evans was the designer, at Messrs. Chance's works, Birmingham. The whole of the chancel has been laid down with tiles from the manufactory of Mr. Whetstone, of Coalville, who, at his own cost, tiled a small portion which would otherwise have been incomplete. In place of the pews have been substituted two carved rows on each side, of oak stalls, with four brass standard gaseliers from the manufactory of Messrs. Cotton, of London. The architect employed was Mr. W. Gillett; the surveyor Mr. W. Redman; and the builder Mr. Broadbent, all of Leicester.

Kingsthorpe (*Northampton*).—The Kingsthorpe church restoration is proceeding. On removing the plaster from the old Norman arcade of the nave, the masonry has been found in so shattered a condition, that more has to be taken down and rebuilt than was at first contemplated. The two western arches, for instance, over which the great gallery was inserted about thirty years ago, have suffered sadly, and have been found too weak to bear with safety the new clerestory walls. Under some of the Norman piers blocks of wood had been wedged in and covered over: small plugs had been inserted in the arches: gaps in the masonry had been filled in with mortar: the bases of the piers had been cut and hacked away to make way for pews, till their state had become most insecure; and, in one case, a brick grave had been formed close up to one of the piers of the chancel. Traces of wall paintings have been discovered, apparently of three different dates, but nothing sufficiently perfect to be worth preserving. About twenty of the old gravestones with sculptured crosses have been discovered. These had been used in building the clerestory walls, probably in the fifteenth century.

Retford.—The church of Retford is about to be restored. About 1,500*l.* have already been raised towards the work. The chancel is to be entirely re-built, and a north aisle and north porch are to be erected. There is already a south porch. The roof is to be of its original pitch, and open seats are to be substituted for the high pews.

Bolton.—The opening and dedication of a Congregational church and school, took place on Good Friday last. These buildings are in the Gothic style of architecture, from designs by Mr. Thomas Oliver, Newcastle-on-Tyne, and cost 6,000*l.* The church will accommodate 1,200 persons, and has a tower and spire at the north-east angle. Mr. Marsden, of Bolton, was the builder.

Kirk Smeaton.—The ancient church at Kirk Smeaton, near Pontefract, has been re-opened after restoration. The church, before the restoration, showed a nave and chancel, and north aisle and west tower, and the disproportion of the north aisle with the nave, or southern aisle, detracted from the beauty of the building. To remedy this, the attention of the architects, says the *Doncaster Gazette*, has been directed. There are various parts that from beneath the heap of plaster now show the original features and decorations of the church. In the north aisle the work has perhaps been the most extensive; for, whilst alterations alone characterize the chancel and nave, this side has been enlarged, to dispense with that disparity of dimension between it and the nave, that so much detracted from the effect which architects seek to secure in ecclesiastical buildings. The north aisle has been pulled down and entirely rebuilt, and widened by some feet, and continued eastward towards the chancel, into which a new arch is opened, and a number of additional seats procured. A new vestry has also been added on this side, the entrance to which is from the north-east side of the chancel. The chancel improvements are varied. Where practicable the arcade and walls have been cleansed, and the stonework appears in many places. The open roof is exposed to view, and though too old to allow of its remaining as the architects found it, the original plan has been followed, at considerable cost. The roofs of the chancel, the nave, and the north chapel, are all of high pitch, the woodwork stained and varnished, with carved ribs and stone corbels. The aisles are newly paved with Staffordshire tiles. The glass introduced is of cathedral quality, with stained borders of blue, yellow, and red, in the east window (above the altar), the window in the east end of the north aisle, and also in one or two in the south side. Externally the entire edifice is re-faced. The tower windows are restored, a vane affixed to the summit, and a lightning-conductor provided. The roof is covered with Welsh slates. The churchyard is enlarged, a breadth of 15 feet being added to it, on the north side, for a length of 60 yards. The amount of contracts and additions for the new north aisle and vestry, new windows, rerooofing, new seats, and heating (but not including the clock, which was subscribed and paid for separately), was 953*l.*; and towards this 779*l.* were promptly subscribed, leaving a deficiency of 174*l.* By these alterations 158 free sittings have been provided. The extended accommodation affords seats for 260 persons, of which number 60 seats are set apart for the children of the Sunday-school. The architects under whose directions and from whose designs the restoration has been made, were Messrs. Atkinson & Brother, York.

ROTHERHAM WATER BILL.

DATING from Berlin, Mr. Hawksley writes,—"As you have been pleased to admit another communication from Mr. White, I beg to repeat that 'I did *not*, in my evidence before the Committee of the House of Commons, on the Rotherham Water Bill, say that the consumption of water in Worksop was eighteen gallons per head daily,' or in any other way mention or refer to Worksop."

On forwarding a precise requirement to Mr. White for the grounds on which he, in an official position, had made the charge against Mr. Hawksley, now denied; he returned us a copy of the *Sheffield Independent* (March 24th), in which Mr. Hawksley is reported to have said, in evidence, when stating the quantity of water consumed per head per day in several towns;—

"Nottingham, 17 gallons; Derby, 10 gallons; Sheffield, 18 gallons; Manchester, 21 gallons; Salford, 17 gallons; Bolton, 16 gallons; Bury, 16 gallons; Sunderland and South Shields, 15 gallons; Berwick, 16 gallons; Norwich, 14½ gallons; *Worksop*, 18 *gallons*; the average of the whole being 17 gallons."

With Mr. Hawksley's letter before us, we have no hesitation whatever in asserting that this must be a misprint. Moreover, we feel bound to say that it was the duty of Mr. White, writing, too, as a public officer, to ascertain the truth of his premises before making this charge; still more so before repeating it; and that he owes both ourselves and Mr. Hawksley an apology.

A DISCREDITABLE OFFER.

SIR,—The practice of competition would appear to retrograde entirely, to judge from the enclosed disgraceful advertisement abstracted from the columns of a daily paper of the 20th ultimo:—

"TO ARCHITECTS AND BUILDERS.—A clergyman, about to build a parsonage house, would be glad to receive designs and estimates for the same. He offers a premium of 5*l.* for the set that will be chosen, and pledges himself to return rejected designs to their owners. The cost of the house is not to exceed 1,200*l.* Accommodation required—porch, hall, dining and drawing rooms, study, kitchens, butler's pantry, w.c., and other offices, cellars, stable, and coachhouse; six bedrooms upstairs, two of which to be nursery and nursery bedroom. Designs, &c., to be sent free, on or before the 1st of May, to ——, Leinster-gardens, Bayswater."

I presume that clergymen in general are supposed to have at least some little knowledge of the architectural profession: in this instance, however, the advertiser seems ignorant of all professional practice, or to be animated by the unworthy desire to obtain the experience and labour of an architect in preparing a complete set of drawings and estimate for a house of 1,200*l.* for the paltry and insulting pittance of 5*l.* He surely cannot expect that any gentleman with the smallest particle of honour for his profession will deign to notice such a disgraceful proposition. I offer no apology for trespassing upon your valuable space: the columns of the *Builder* are well known to be open to show in a true light any degrading offer to obtain the services of professional men. JUSTITIA.

A SITE FOR THE ALBERT MONUMENT.

SIR,—Permit me, at the eleventh hour of the great "Albert Monument" question, to suggest the corner of the Green Park, at the top of Constitution Hill, opposite to Baron Rothschild's new mansion, as a more eligible site than the more remote spot at Kensington Gore.

The ground is elevated, and commands views of St. James's and parts of Hyde parks, Westminster, and Imperial and Buckingham palaces, and would be visible from Kensington, Bayswater, and Piccadilly, the greatest thoroughfare in the west end of the metropolis. A SUBSCRIBER.

*** This site has been suggested in our pages before.

MONAGHAN ASYLUM COMPETITION.

SIR,—The unsatisfactory results of recent architectural competitions in Ireland, have been the subject of much complaint; and the architects of Ireland have recently held several meetings to devise such measures as may in future guard the profession from the injustice so often wrought by the arbitrary conduct of committees. Architects are now invited to submit designs for another important building, the new Lunatic Asylum for the counties of Monaghan and Cavan. There are a few facts respecting this and the other asylums now about being erected throughout Ireland, to which I think attention should be directed.

Orders have been issued by the Lord Lieutenant in Council, for the erection of six new lunatic asylums in Ireland. The arrangements are under the direction of Commissioners of Control (corresponding to English Commissions in Lunacy), acting in conjunction with local committees appointed by the various county grand juries. The selection of designs, and appointment of architects, have been generally left to the committee, subject to the approval of the Board of Control, who have an architect in Dublin, appointed to advise and report to them on all designs adopted by the local committees, previous to their being carried into execution.

So far all seems reasonable and fair. The following particulars, however, are of a different character, and should be noted by all intending competitors.

It would appear that the advising architect to the Board of Control is also permitted to act as architect to any of the asylums of which the local committee may appoint him, and that it forms part of his agreement with the Board, that he is to design and superintend these for half the usual architects' commission, or 2½ per cent. on the outlay. A letter to this effect was addressed by the Board to each of the local committees; and, in consequence, the Board's architect was appointed for two of the asylums, which are now in course of erection. As a further consequence, in the case of two other asylums, where the local committees did not wish to employ the Board's architect, the low terms of his proposal were made the ground of endeavours to induce other architects to undertake the work on the same terms, and in one instance with success.

Passing over the anomalous position occupied by the Board's architect, it is much to be regretted that the Board of Control, composed as it is by men of high standing in various professions, should adopt measures which, while unfair and injurious to the architectural profession, can hardly be expected to produce any really economical or satisfactory results to the public service.

As regards the Monaghan committee, they have stated that, while not pledged to employ the author of the best design to carry out the work, it will be their desire to do so. They have not stated, however, whether, in the event of his being so employed, they propose to pay the usual commission or not; and with the above-mentioned facts before them, this question becomes of some importance to those architects who may be disposed to submit designs. ALPHA.

TEMPTING BAIT.

SIR,—When at Manchester the other day, my attention was called to the following advertisement. Knowing your willingness to expose such unprofessional practices, I have thought proper to forward the same to you. J. W.

"SMITH, Practical Architect, Sanitary Engineer, Surveyor, Valuer, &c., —— Street, Manchester. — Plans, Specifications, &c., for Places of Worship, Schools, and Buildings for Charitable purposes made, free from charge. Plans, Details, and Superintendence for any description of Property, 1½ per cent."

THE WEDDING PRESENTS.

COULD not one day in the week be set apart so as to enable the "upper ten thousand" to see the presents to the Prince and Princess of Wales, at an entrance of, say, one guinea or half a guinea, or even 5s.? Let the "people" have the other five days, at free and sixpenny admissions, as at present; but let the upper and professional classes have one day, and on that day a chance of really seeing the presents; without, as is now the case, having to stand a squeeze of nearly two hours, and even then, on arrival at the objects, being "moved on" without seeing them. I am sure many hundreds, and perhaps thousands, of people would avail themselves of that *quasi*-exclusive day, and a large sum be raised, which could be applied in charity in Bethnal-green and elsewhere.

C. J. PALMER.

MEDIÆVAL ARCHITECTURE OF PALESTINE.

YOUR correspondent, "G. V. R.," puts to me, through your columns, two questions on the report taken of my lecture on the Mediæval Architecture of Palestine, which I am happy to have an opportunity of elucidating; as its brevity, as compared to the *spoken* lecture, may require some explanation for many.

In speaking of a very fair specimen of the churches built by the Crusaders in Palestine and Syria, I observed that it had a cupola over the centre of its transept, which is commonly the case with churches of that period in Palestine. This feature did not exist then in European churches, and the Crusaders must have borrowed it *there and then* from the Arabs. It is found in subsequent churches built by *Latin* Christians in the South of Europe, such as those of the Morea, Candia, Sicily, and the continent of Italy. The work on the churches of the Morea, published by Didron about 1852, and the works of Hittorf and of the Duke of Serra di Falco on Sicily, are my authorities for such an assertion as regards these countries; while my own visits to Pisa, Sienna, Ancona, &c., are my authorities for asserting this of the continent of Italy. Having now answered "G. V. R." to the best of my power, may I ask him why he calls my assertion *astounding?*

As to the "basilica," the report of my lecture seems to me tolerably clear. In speaking of many early churches, consisting of a single nave and apse, I note that the word "basilica" was applied to the hall of Roman mansions, as well as to Roman halls of justice; and, considering how many churches Christians had in Palestine and Rome, before they could have any prospect of ever obtaining possession of public basilicas, I conclude that the original type of early churches was the mansion or *private* basilica, consisting of a rectangular hall, with a semicircular recess or *oriel* attached to one end of it, and not the *public* basilica, which is itself a development of the former, and which could only suggest a development of the original form of a Christian church.

GEORGE J. WIGLEY.

THE THOROUGHFARES.

SIR,—It appears to me that the real cause of the disasters at the late festivities was not so much a collapse of the City police organization as the general apathy of the Corporation on the subject of street improvement. A glance at a map of Paris, or any large French town, will show that our neighbours are wiser than we in the matter of street arrangement; for at the junctions of large thoroughfares provision is made, by circular spaces, for the additional traffic which is a consequence of the junction. If the City would go vigorously to work, opening up and demolishing with an earnest will, our streets would in a few years bear some proper proportion to the population.

The perpetual and disgraceful blockade at the junction of Leadenhall-street and Cornhill, and at the junction of Fenchurch and Gracechurch streets would be remedied by the making of a circus at those points; and now that the new street is to be made to the Mansion House it is imperative that a larger space should there be opened up than exists at present; but no opportunity is availed of, and the houses opposite Charlotte-row, now removing, are to be immediately rebuilt in a substantial style: so that we shall have seven streets pouring in their myriads upon this central point on some future gala day; and the result will be something still more frightful than on the last occasions. A CITIZEN.

HUNGERFORD HALL.

SIR,—I am only now aware that in the *Builder* you were lately pleased to express your good opinion of the strictly temperate and orderly principles on which I successfully established Hungerford Hall as a music and refreshment hall; and for your influential and valuable approval please to accept my grateful thanks. As my interests, however, may be injured, as they were in the matter of compensation, by the public belief, in which you very naturally share, that it is *I* who have removed to a hall which was opened under the same name immediately after the railway company dispossessed me of Hungerford Hall, and before I could have time to complete the decorations of the new Hungerford Hall, which I have just opened in the Westminster Bridge-road, I am sure you will do me the justice to inform your readers that this latter is the only establishment of the kind I have any connexion with in London at present.

CARLO GATTI.

PATENTS CONNECTED WITH BUILDING.*

AN IMPROVEMENT IN THE CONSTRUCTION OF A CONICAL COVER OR POT, A GRADUATED APPARATUS FOR PLACING UPON CHIMNEY TOPS, AND FOR PREVENTING SMOKE AND EXTINGUISHING FIRES."—*E. de la Bastida.* A communication. Dated 19th September, 1862.—This invention cannot be described without reference to the drawings.

FORMATION OF BOILERS TO BE EMPLOYED FOR WARMING BUILDINGS AND SIMILAR PURPOSES.—*D. C. Bridge and J. Dyson.* Dated 19th September, 1862.—This invention consists in a new arrangement of water spaces and tubes, whereby a much larger amount of surface is exposed to the action of the heat than heretofore; and in some of the forms of boilers the smoke is also consumed, thus effecting economy in fuel.

HINGES FOR FRENCH CASEMENTS.—*W. Lea.* Dated 25th September, 1862. This invention consists in securing to the back of one flap of the hinge, by means of a pin, one end of a quadrant carried through an aperture in the flap itself; the other end of the quadrant passes through another aperture in the other flap of the hinge. At the back of the second flap, free to move on a pin, a rod or lever is fitted, which projects beyond the

* Selected from the lists in the *Engineer, Mechanics' Magazine*, &c.

flap, and which is armed with a tongue or catch. Notches or holes are made in the quadrant, and on bringing down the lever so as to engage the catch into one or other of the notches or holes, the casement is retained open to the extent allowed by the particular notch or hole engaged until the catch is released.

WINDOW-SASH FASTENER AND GUARD.—*J. J. Bates.* Dated 26th September, 1862.—The object of this invention is to fasten a window-sash when the said sash is shut down, and to prevent the said sash, when partly opened, from being raised from without. The invention is carried out as follows:—To the front edge of the top rail of the lower sash two levers are jointed, the said levers being situate nearly horizontally, and having motion in vertical planes. The projecting or outer end of each lever is extended laterally, so as to form a handle or plate under which the finger is placed in raising the window-sash. On the upper surface of the top rail of the frame two other levers are jointed, the longer arms of the last-named levers being nearly vertical, and their shorter arms horizontal. The shorter arms engage under the inner ends of the first-mentioned levers. The tops of the vertical levers are bent nearly into a horizontal position, and bear against plates of brass or other metal fixed vertically on the front sides of the top sash. The said plates have holes at a distance of about 2 inches apart. Springs under the shorter arms of the vertical levers press the top ends of the said levers against the vertical plates, and cause them to engage in the holes in the said plates. In raising the window-sash it is only necessary to place the forefinger of each hand under the handles of the horizontal levers, and lift the said handles.

CONSTRUCTION OF LEADEN WINDOW-SASHES, CASEMENTS, OR GLAZED COVERINGS OR PARTITIONS.—*W. E. Gedge.* A communication. Dated 26th September, 1862.—The cheeks of these improved sashes are not more than half an inch broad, and the adhesion of the glass to the leaden sash completely excludes cold from the interior, thus making a glazed gallery as warm as a parlour. But this heat, which has hitherto been so prejudicial, inasmuch as, changing into steam, it rendered glazed apartments uninhabitable, necessitated some arrangement for carrying off the condensed vapour, and therefore the improved leaden sashes, the subject of this invention, which may be straight or curved, and of any suitable length, are provided with small openings at certain distances from each other, and hidden at the bottom of the chamber groove or frame, so that the water that runs over the inside glass falls into the chamber or grooves, and finds a direct exit to the exterior as described.

Books Received.

A Manual of Heraldry, Historical and Popular; with seven hundred Illustrations. By CHARLES BOUTELL, M.A. London: Winsor & Newton. 1863.

IT is the aim of this manual to inquire into the true character and right office of heraldry, and to describe and illustrate its general condition as it is in use amongst ourselves. Of the rise and progress of the *science*, and of its almost universal prevalence under variously-modified forms, the author gives a slight and rapid sketch. The volume, which comprises upwards of four hundred pages, contains a good deal of curious and interesting matter of its kind, including special chapters on architectural and monumental heraldry; corporate and official heraldry; the heraldry of the cross; royal, foreign, modern, and various other aspects of heraldry; heraldic charges, terms, and figures, mottoes, crests, seals, coins, flags, badges, &c. The author is of opinion that,—

"Every Gothic architect ought to be a thorough herald: heraldry alone can enable him to render his works, in the noblest and most perfect sense, historic monuments: without heraldry no lover of the great art which has been so happily revived amongst us is able either to feel the full power of what the Gothic has transmitted to him from the olden time, or to realize all that it is now able to accomplish as a living art."

Heraldry, he urges,—

"Provides for the Gothic architect,—and particularly when employed upon public and national works,—the most comprehensive and the most plastic of symbolism."

Such being the case, Mr. Boutell thinks,—

"It is a matter for equal surprise and regret that architectural heraldry should hitherto have been so generally neglected, even by some of our Gothic architects."

And he adds that,—

"It is to be hoped that the time at length has come in which both architects themselves and all who feel an interest in their great art will bestow at least a portion of their regard upon heraldry in its special relation to architecture."

Touching the "armorial insignia of H.R.H. the Prince of Wales, K.G.," Mr. Boutell has designed a shield; but would the College of arms ratify the design? We doubt it.

London and its Gas Companies: State and Condition of the Companies supplying Gas to the Metropolis. By SAMUEL HUGHES, C.E. London: Waterlow & Sons. 1863.

MR. HUGHES has here made a searching examination of the published accounts of the metropolitan gas companies, in the form of a letter to the Home Secretary. The accounts on which his investigation is based are the first of those made out by each company in accordance with the Metropolis Gas Act, 1860; and they seem to be prepared in the same fallacious and deceptive way that we proved those first of all published by order of the Commons to have been made out at the time we were urging on the gas movement, which has since led to such extensive reductions of price, beneficial to all parties.

Notwithstanding the confusing mode of making out these accounts, and the strenuous efforts of some of the companies to swell their capital, Mr. Hughes has not only clearly shown that, "in the aggregate, the whole thirteen companies have realized a profit sufficient to pay a dividend of more than nine per cent. on *all* their capital, after providing for payment of all fixed interest and all interest due on borrowed capital;" but that "if the capital of certain extravagant companies be reduced to that of more economical ones, the profit realized by the whole of the companies would vary from 11 to 18 per cent., according to the companies which are taken for comparison."

Most of the gas companies of the metropolis, also, have had their accounts, such as they are, published for some years in the *Journal of Gas Lighting*; and an examination of these accounts, Mr. Hughes remarks, will show that these companies have for several years realized a profit exceeding 10 per cent. on a *bonâ fide* and moderate capital, in addition to the reserve which they are entitled to under the Sale of Gas Act.

The state of matters, therefore, is sufficient in itself to justify the gas consumers all over the metropolis in demanding an *immediate and very large reduction in the price now paid for gas*; but

"If in the end," says Mr. Hughes, "the companies resist the appeal which these facts make to their sense of justice, and obstinately refuse a reduction of price, am I not, at all events, fairly entitled to ask, on the part of the public, for a searching and thorough examination of the accounts, in order that the present unsatisfactory and anomalous position of the companies may be replaced by one possessing the attributes of justice and common sense?"

The time then seems now to have arrived for the local authorities of the metropolis to take action under the Metropolis Gas Act, and to avail themselves of its provisions to compel a reduction in the price of gas.

Two courses are open to them, and these may be pursued simultaneously: 1st, To call on Parliament to adjust the irregular and anomalous capital accounts of the gas companies, as they did in 1851, in the case of the water companies, in order as far as possible to create uniformity of price, under the provisions of the Gas Works Clauses Act, which compels a reduction when dividends amount to 10 per cent. 2nd, To proceed under the Gas Works Clauses Act to have the accounts examined by official accountants, in order to determine those cases in which the absolute profits have already reached the prescribed amount of 10 per cent.

VARIORUM.

THE *Mirror*, which has just now been put before the public, promises to be reflective, true, and brilliant, as mirrors should be. We could have wished another title. This belongs to our old friend Mr. Timbs and the early history of periodical literature in London. However, what is done is done. The first number of the new venture, which we are glad to learn is in first-rate hands, is an excellent one: if this standard can be maintained success is pretty nearly certain. It is specially a newspaper, giving the news of the week digested; but it is also a review, and contains some admirable articles.

WEDDING PRESENTS: SOUTH KENSINGTON MUSEUM.—The attendance, as we expected, has been enormous. During the week ending 25th ult., the visitors numbered 92,805.

Miscellanea.

THE LATE MR. A. F. ASHTON, ARCHITECT.—We record with sincere regret the death of Mr. Frederick Ashton, which took place at his house, in Pelham-crescent, Brompton, on the 22nd of April, after less than a week's illness, the result of a violent cold. Mr. Ashton "served his time" with the late Mr. Finden, and gained a medal at the Academy. His acquirements were very considerable. He was well acquainted with ancient and modern languages; was a good draughtsman, and an excellent musician. Possessed of a sufficient fortune, there was no great stimulus for exertion, so that he did not pursue his profession actively. The readers of the *Builder* have had the advantage, on many occasions, of his careful and instructed pen. The very brief illness which terminated in his death, at the early age of forty-eight, was brought on by somewhat imprudent exposure to night air after exertions in an amateur orchestra. He has left a young widow and several daughters to deplore his untimely loss.

MR. POUNCY'S NEWLY PATENTED CARBON PROCESS.—The *Dorset Chronicle*, which quotes, as many others have done, our recent remarks on this subject, states that the Photographic Society of Scotland has awarded Mr. Pouncy its silver medal for this discovery of his in taking photographs in printers' ink. The report says:—"For printing in carbon the committee would recommend that the medal be given to Mr. Pouncy, of Dorchester, for his view of Melrose Abbey, in which it appears to the committee he has overcome the difficulty of representing in carbon every variety of shade and tint exhibited in the original negative. At the same time the committee trusts Mr. Pouncy will be stimulated by this award to perfect his *most important discovery*, and not rest satisfied till he is able to compete in delicacy of tint and pureness of lights with prints produced by nitrate of silver, so as to make his process available either for landscapes or portraits."

HEREFORD CATHEDRAL: ACCIDENT TO THE CORONA.—The corona, 18 feet high, by Skidmore, of Coventry, which was in the International Exhibition, was recently elevated temporarily to its intended position under the tower, in the presence of Mr. Skidmore and other gentlemen. After it had hung for some time suspended by a rope, it was about to be lowered, when unfortunately the rope gave way, and the corona fell to the ground from a height of about 25 feet, the momentum of the fall causing it to sink into the concrete of the flooring about 2 feet 6 inches. Happily no one was seriously hurt. The damage to the corona, although considerable, is not irreparable: on the same night it was taken to pieces, packed up, and sent off to Mr. Skidmore's works at Coventry, where it will be repaired in about a month. The accident does not in any way interfere with the completion of the restoration, which is arranged to be effected in time for the grand re-opening on the 30th of June next.

STEREOGRAPHY BY AID OF THE MAGIC LANTERN.—A correspondent, "H. T. B.," asks whether it be not possible to produce gigantic stereographic effects by throwing transparent stereographs on the usual screen by means of the magic lantern; and using, as the stereoscope, the dark room itself, with some kind of eye-glasses like the skeleton or spectacle stereoscope already in use. Attempts have been made to enlarge stereographic effects, but there must be some optical difficulty in the way; and whether our correspondent's suggestion be new to those who have tried such experiments we do not know, but are inclined to suspect that such a plan must have already been considered. Were it possible, however, we might suggest, in addition, that in thus exhibiting a building or a statue, something like the effect of walking round it might be produced by means of a cruciform arrangement of stereographs revolving on a single perpendicular axis through the centre of the cross: at all events, the two opposite sides of the building or statue might thus be alternately shown; although, with transparent stereographs and a form of magic lantern, the display of all the sides might not be possible. With two such lanterns, however, focused on the same spot, as in dissolving views, and worked alternately, this might easily be done; and the effect of a walk round the object in view, or at least of its revolution round its own centre, might thus be obtained. The same principle might be brought into operation with magic lanterns, even though not stereographically; and, as we have before suggested in the *Builder*, it could easily be applied to the stereoscope itself as in ordinary use.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—On the 23rd, at the rooms in Conduit-street, Mr. A. W. Blomfield delivered a lecture on "Art in Common Things."

UTILISATION OF SEWAGE.—A petition has been presented to the House of Commons by Mr. Doulton, M.P., from the vestry of St. Mary, Lambeth, in reference to utilisation of the metropolitan sewage. They pray that a select committee may be appointed to inquire into the subject prior to any plan being adopted by the Metropolitan Board of Works.

ANCIENT REMAINS IN BRIDGE-STREET, BLACKFRIARS.—In excavating the roadway in Bridge-street for gas mains, the men struck upon a conglomerated mass of stone, iron, and other substances, the whole of which Mr. Stephens, from Messrs. Aird & Sons, who are executing works for the City Gas Company, caused to be carefully removed. It is supposed, from the position in which these remains were found, that they must have belonged to some large ancient building which stood upon the banks of the old Fleet River.

THE GENERAL POST-OFFICE.—The work of constructing kitchens and dining-rooms designed for the accommodation of the letter-carriers and sorters has at length been perfected, and arrangements made for the immediate application of the new rooms to their intended purpose. A plan was shadowed forth some time since by the Post-office authorities for providing suitable dwellings, properly arranged, in a convenient neighbourhood, for such of the letter-carriers and sorters as may desire them. This promise, there is now reason to believe, is about to be carried out.

FIRE IN A RAILWAY BRIDGE.—On Tuesday morning, at ten o'clock, a fire of an unusual character took place in a bridge belonging to the London, Chatham, and Dover Railway which crosses West-street, Walworth. It appeared that one of the trains travelling towards the Elephant and Castle dropped a piece of burning coal, which rolled against the wooden skirting on the west side of the bridge, and set fire to it; and, fanned by the fresh breeze, the flame soon extended more than half way over the bridge. An alarm was given, and in a short time two engines belonging to the brigade, and one belonging to Mr. Hodges, the distiller, were on the spot, and with a plentiful supply of water extinguished the flames. The injury done is not of any serious extent.

DEATHS FROM DESTITUTION IN BETHNAL-GREEN.—On Saturday in last week Mr. John Humphreys, one of the coroners for the county of Middlesex, held an inquest in Bethnal-green, touching the deaths of Elizabeth Ashley, aged 36, and John Hayes, aged four weeks, who it was alleged died from extreme destitution. Dr. Massingham said that last Wednesday he was sent for to see deceased. The family were living in a sort of underground cellar or kitchen, the only articles in which were a bedstead and a table. There was no chair or comfort of any kind. The woman was dreadfully emaciated. The jury returned a verdict of death from disease of the lungs, accelerated by great privations. The child John Hayes was the son of a hawker of the same name, who died "from fever accelerated by want of food," about four weeks ago. These are the practical commentaries on the statements we have already made.

THE WORKING MAN'S KITCHEN, GLASGOW.—The Great Western Cooking Depôt has met with so much public acceptance that about 6,000 people breakfast and dine daily at the sixteen branches which are at present in operation. A new kitchen has within the last few days been opened in Pitt-street for preparing the food which is consumed at the various branches. This building, which is a large structure partially of wood and brick, is divided into three departments—the store room, the kitchen proper, and the bake-house. The boilers, the erection of which cost about 800*l.*, are of peculiar construction, and were made by Messrs. A. & W. Smith & Co., engineers, Glasgow. They consist of a copper boiler, which is placed inside a cast-iron boiler, a small space being left between them to allow of the introduction of steam, by which the contents of the copper boiler are boiled. The steam is generated outside the building, and conducted into the kitchen, and introduced into the boilers, by means of pipes, which permit either of one boiler only being heated, if that be all that is required, or of the whole ten being heated at the same time. The whole building, storehouse, kitchen, bakery, and outhouses, occupy 1,200 square yards of ground. Including this, the erection cost nearly 3,000*l.*

THE MIDDLE-LEVEL CATASTROPHE.—The defendants in the Middle-level drainage case, tried at the recent Norwich Assizes, have obtained a rule for a new trial in the Court of Queen's Bench. The application for the rule was based on the grounds of misdirection, and that the verdict for the plaintiff was against the weight of evidence.

THE METROPOLITAN TURNPIKE ROADS.—It appears from a recent report of the commissioners of these roads, that the receipts from tolls on the roads during the past year were 67,684*l.* 6s. 7d., and the receipts from all sources 78,103*l.* 14s. 7d. The expenditure during the same period was 75,595*l.* 14s. 1d. A Bill is now before Parliament which, if passed, will transfer from the commission to the respective parishes the maintenance of fifty-one miles of road, and cause the removal of twenty-five turnpike-gates and fifty-six sidebars.

MODEL OF A CHURCH BY A LADY.—The *Norfolk Chronicle* speaks of having seen a pretty and extremely well executed model of Heigham Church, in perforated card, by Miss Clara Wells, of St. Gregory's: the time occupied in its completion was nine months. Both interior and exterior are comprised in the model, and are depicted with great minuteness. The number of tiles comprised in the roof is upwards of 4,000—each tile being about one-fifth of an inch long. The length of the model is only 11½ inches; the width, 4¼ inches (not including the transepts); its height from the base to the roof, 6¾ inches; and to the vane of the steeple, 14¼ inches.

ARCHITECTURE AND RELIGION.—At the Offord-road Institute, Islington, on the 22nd of April, Mr. Gunn fired off an essay on "Church Music and Architecture in their Relation to Public Devotion." He referred to the heathen temples of old and the church architecture of the early Christians, when architecture and music were considered as the handmaids of religion, and when everything was done to encourage religion by the influence of art. He thought church organs ought to be dispensed with, as he considered there was more devotion displayed in a chorus of voices than with an organ, which invariably drowns the singing. He advocated plainness of style for places of public worship, with roofs of a "natural pitch." The Rev. John Pulsford differed entirely with the essayist, and strongly advocated the powerful influence beauty of form had on the mind. Gothic architecture was calculated to operate powerfully on the mind, and impress us with the sanctity of the place. Mr. Pike, Mr. John Hayward, and Mr. W. F. Potter took the same view.

REFLECTORS OF LIGHT FOR HOUSES.—In the narrow streets of Genoa a reflector is used, made of clean white cotton or linen cloth, attached to a framework of wood, or to a couple of iron rods, secured to brackets of iron, one rod being at the top, the other at the bottom of the brackets, and placed at an angle of 45 degrees with the window, the apex of the angle nearly touching the window, and, of course, turned downwards, the reflector itself being of the breadth of the window at the least, and of about 3 feet or more in depth. The shops on the ground-floor have the reflector fixed towards the upper part of the window, in order to leave the lower part free for exposing the articles that may be for sale. A correspondent of the *Morning Advertiser* suggests the use of such reflectors in houses and in other buildings situate in the narrow streets of our own towns or villages. The adoption of such a plan generally and at once would create employment for many a cotton-loom now idle.

PRESERVATION OF TIMBER BY SULPHATE OF COPPER.—A pamphlet is in circulation containing a short description of Dorsett & Blythe's patented process of preparing wood by the injection of heated solutions of sulphate of copper; a process said to have been adopted by French, Spanish, and Italian, as well as other Continental railway companies; by the French Government for their navy and other constructions; and by telegraph companies for poles on Continental lines. The advantages of the injection by sulphate of copper are thus summed up by the patentees:—1. It is cheaper than creosote, and can be employed in places where creosote cannot be had. 2. Wood prepared by it is rendered to a great extent incombustible. 3. Wood for out-door purposes so prepared, has a clean yellowish surface, without odour: it requires no painting; remains unchangeable for any length of time; and can be employed for any purpose, the same as unprepared material, and carried with other cargo without hinderance. It is recommended for railway and other uses in India.

THE ARCHÆOLOGICAL INSTITUTE AT ROCHESTER.—The arrangements for the archæological congress to be held in Rochester in the month of July next are progressing most satisfactorily.

HAILEYBURY COLLEGE.—The council of this college have asked for tenders for a large swimming-bath, 210 feet long. They have recently had gas-works erected. Mr. J. F. Fairbank is the engineer, and Messrs. Barwell & Co., of Northampton, erected the gas-works.

THE NATIONAL PORTRAIT GALLERY.—The sixth report of the trustees of this gallery issued on Saturday, states that the purchases now amount to 111. The large collection of engraved portraits bequeathed by Mr. H. W. Martin, amounting to some thousands in number, is in process of classification and cataloguing for purposes of reference. They include portraits of all ages and all countries.

WORKMEN'S CLUBS: BIRMINGHAM.—The committee who undertook to establish Working Men's Clubs in Birmingham have taken a house in New-hall-street, for the first club, which will be opened so soon as 250*l.* can be obtained to furnish the rooms, and provide for the first year's rent. After this expense is defrayed, it is believed that the club will be self-supporting. The management will be left mainly in the hands of the members, the trustees appointed by the committee retaining the necessary control over the furniture and premises.

THE NORTHAMPTON ARCHITECTURAL SOCIETY. At a recent committee meeting of this Society, amongst other proceedings, the Rev. G. W. Paul, as secretary of the sub-committee on cheap grave memorials, read a report which stated that very satisfactory answers had been obtained from Mr. Blashfield, of Stamford; Mr. Sumter, of York; and others, by which good Christian memorials in terra-cotta, wood, or iron, might be furnished at a rate not exceeding 10s. or 12s. each. The sub-committee was requested to continue their inquiries, and to report whether the society, by the publication of a sheet of designs or otherwise, could forward the object in view. They would be glad of any suggestions or good designs for tomb crosses.

THE NEW ALMS-HOUSES, WINDSOR. — The new alms-houses in Victoria-street have been recently completed. The building is in the Italian style, and forms three sides of a quadrangle. It cost about 3,500*l.*, the materials being red and white brick, with Bath stone dressings to porches and bay windows. In the eastern wing twelve inmates will have one room each, with necessary conveniences: the western wing will accommodate twelve inmates: the centre houses will have two rooms for each, and there is a board-room in the centre. The building was erected by Mr. Snowball, after the design of Messrs. Edgington & Tait. Her Majesty and the Princess of Wales lately paid these almshouses a visit.

THE PORCH OF ST. MARY'S, OXFORD.—In the Convocation to be held on the 30th ult., it was to be proposed that the Vice-Chancellor be empowered to spend such a sum as might be necessary for the restoration of the present porch of St. Mary's church, according to the recommendation of Mr. Scott, who says, in his letter on the subject,—"I would suggest the saturation of the stone, in the first instance, by some indurating solution, as it is in so tender a state at present as hardly to bear to be touched: after this we could proceed more safely in cutting out the most decayed portions, and replacing them; and so feel our way onwards with other parts; judging, as we go on, to what extent to proceed and where to stop. It could not be executed by contract."

SEWERAGE ACCIDENT AT DEPTFORD.—A coroner's inquest on the death of three men by an accident at the Metropolitan Sewerage Works in course of excavation for the Southern Low-level Sewer, was held on Wednesday last, at Deptford, before Mr. C. J. Carttar, when various evidence was led as to the accident. Mr. S. Gale, the manager for Messrs. Aird, the contractors, attributed it to the pumping out of loose sand with the water from the sewer foundations; and William Green, an excavator, complained of want of shoring; but Mr. Gale denied that any complaint had ever been made to him. George Noales, foreman of the timber-work, denied that there was any want of shoring, and agreed with Mr. Gale as to the cause of the accident, as did Mr. John Bennett, the clerk of the works in the service of the Board. Mr. John Aird, the contractor, said more than ordinary care had been taken with this cutting, and concurred in opinion with the preceding witnesses as to the cause of the accident. The jury returned a verdict of "Accidental Death."

NEWENT BOARD OF HIGHWAYS.—Mr. G. B. Armstrong, late assistant in the engineer and city surveyor's office, Gloucester, was elected surveyor to the Newent Board of Highways on the 17th ult.

BROCOLI PRESENTED TO THE QUEEN.—A curious brocoli has been sent to her Majesty, who has graciously acknowledged the receipt of it through the Master of her Household. Its shape was that of a scroll or ribonade, 18 inches in length, 1½ inch in diameter in the middle, and 3 inches at either end. The plant was lined in the centre by a solid line of the same nature as the flower, and following its form with geometrical precision.

THE PARIS EXHIBITION OF 1863.—The *Moniteur* publishes the following note:—"Numerous complaints having reached the Emperor respecting the refusal of works of art by the Exhibition jury, his Majesty, anxious that the public should have an opportunity of deciding on the justice of those complaints, has determined that the works refused shall be exhibited in another part of the Palace of Industry. This exhibition will be optional, and the artists who may not choose to take part in it have only to inform the administration of their decision, and their works will be at once returned."

HANOVER-SQUARE ROOMS.—On the 24th ult., Herr Sigismund Blumner gave the first of three subscription *soirées* for chamber music. The works chosen for performances are selected from the great masters, and will comprise, in particular, such as are either neglected, or are pre-eminent for their beauty. The artists for the first *soirée* were:—Violin, Mr. Vieuxtemps; tenor, Mr. Webb; violoncello, Signor Pezze; and pianoforte, of course, Herr Blumner. Madame Lemaire and Signor Bossi were the vocalists. It was an exceedingly interesting concert, and Herr Blumner showed himself a master in his art.

SALES OF HOUSE PROPERTY.—At the Mart, by Mr. George Prickett:—Freehold residence, No. 3, Bedford-place, Bedford-square, Brighton, estimated value 65*l.* per annum—sold for 620*l.* By Mr. Edmonds:—Leasehold houses, Nos. 21, 22, 23, 24, 25, and 26, Melina-place, Hackney, producing 89*l.* 14*s.* per annum, term 60 years from June, 1844, ground-rent 13*l.* 10*s.*—420*l.* Leasehold fifteen houses, Nos. 9, 10, and 11, Ada-street, and 12 to 23, George-street, Hackney, let at weekly rents amounting to 234*l.* 10*s.* per annum, term 60 years from June, 1844, ground-rent 33*l.* 15*s.*—1,090*l.* Freehold three cottages and plot of land, in all about 1*a.* 0*r.* 37*p.*, upon the high road, Harmondsworth, Middlesex, let at 30*l.* per annum—470*l.* At Garraway's, by Mr. Walker:—Leasehold dwelling-house and business premises, No. 26, Tavistock-place, Burton-crescent, let on lease at 80*l.* per annum, term 95 years from Christmas, 1804, ground-rent 18*l.* 18*s.*—580*l.*

THE LONDON, CHATHAM, AND DOVER RAILWAY AND THE GREENWICH OBSERVATORY.—Yesterday a further report of the Astronomer Royal, regarding the probable effect on the Observatory of the proposed extension of the London, Chatham, and Dover Railway through Greenwich Park, was issued. It may be briefly stated that what Professor Airy now proposes, after the most careful investigations and experiments, as sufficient for the protection of the Royal Observatory, is—that it be required that the railway pass through the park in a tunnel; that the railway take the course through the park defined by the red line on a map which has been prepared, the rails being on continuous bearing; that the average speed of each and every train while passing through the park be limited by clause in the Act of Parliament to the rate of twelve miles an hour; and that by clause in the Act of Parliament summary legal process be defined for the enforcement of that limitation.

TENDERS.

For new bank premises at Maidstone, Kent, for the London and County Bank. Mr. Fred. Chancellor, architect. Quantities taken out by Messrs. Curtis & Son:—

Downes	£3,884 0 0
Foord	3,450 0 0
Tracey & Co.	3,435 0 0
Greensted (accepted)	3,414 14 0

For additions and alterations, for Mr. C. Cockerell, at Sydenham:—

Downs	£1,748 0 0
Little	1,700 0 0
Piper	1,686 0 0
Sawyer	1,677 0 0
Patrick	1,633 0 0
Perry	1,571 0 0
Browne	1,552 0 0

For the erection of two shops in Sankey-street, Warrington, for Mr. Ben. Sharp. Mr. Ben. P. Coxon, architect. Quantities not supplied:—

Campbell	£1,311 7 0
Gibson & Son	1,085 0 0
Pennington (accepted)	1,081 0 0

For the erection of a villa residence on the British Land Company's Estate at East Cowes, Isle of Wight, from plans, &c., by the Company's surveyor:—

	If with Jennings's patent bonding bricks.	If without the bonding bricks.
Ward	£1,377 0 0	£1,355 0 0
Wheeler	1,369 0 0	1,341 0 0
Grimes	1,085 0 0	1,060 0 0
Chinchen (accepted)	1,050 0 0	1,035 0 0

For additions to cottage at Waltham, Berks, for Rev. E. J. Parker, B.D. Mr. W. H. Woodman, architect:—

Lawrence & Co.	£435 0 0
Searle	433 13 8
J. & S. Wheeler	400 0 0

For warehouse at Abingdon, Berks, for Messrs. Hyde & Clarke. Mr. W. H. Woodman, architect:—

Dover (accepted)	£2,360 0 0

For rebuilding the Bell Inn, Kilburn. Mr. George Truefitt, architect. Quantities not supplied:—

Carter	£1,838 0 0
Waters	1,785 0 0
Longmire & Burge	1,765 0 0
Allen (accepted)	1,575 0 0

For the erection of a house and stables at Croydon. Mr. Cæsar Long, architect:—

Cohen	£2,925 0 0
Conder	2,821 0 0
Scott	2,620 0 0
Perry	2,600 0 0
Larke	2,598 0 0
Ring	2,300 0 0

For building two dwelling-houses at Holloway. Mr. James Harrison, architect:—

A. & J. Smith	£978 0 0
Macfarlane	905 0 0
James & Ashton	848 0 0
Dunford	750 0 0

For a pair of villas at Crescent-road, Croydon. Mr. William Paice, architect. Quantities supplied:—

Partridge & Crutch	£1,728 0 0
Simms	1,666 0 0
Donelly	1,648 0 0
Henshaw	1,616 0 0
Wallace	1,599 0 0
Foster	1,499 0 0

For new roads, Clarendon-road, Hornsey:—

Haynes	£540 0 0
Carnall & Co.	446 0 0
Leeks	410 0 0
Rutty & Co.	401 0 0
Cole, jun.	398 0 0
Sharon	390 0 0
Brucl	376 0 0
Newberry	360 0 0
Haines	365 0 0
Porter	302 0 0
Pearce	294 0 0
Hayward	292 0 0
Osborne & Son (accepted)	264 0 0

For alterations and additions at the Warwick Arms, Gillingham-street, Pimlico, for Mr. Daft. Mr. T. R. Parker, architect:—

Fish	£510 0 0
Duncanson & Moultrie	458 0 0
Cross	440 0 0
Sabey	425 0 0
Bennett	409 0 0

For painting, decorative works, &c., at the Colosseum Tavern, Portland-road, for Mr. Grace. Mr. A. Newman, surveyor:—

McIntosh & Nicol	£116 0 0
Norris	115 0 0
T. Haines	68 10 0

For the restoration of the parish church of St. Margaret, Lewknor, Bucks. Mr. Arthur W. Blomfield, architect:—

Wyatt	£2,020 0 0
Outhwaite	1,932 0 0
Castle	1,720 0 0
Holland	1,454 0 0

For works, 12, Mansfield-street. Mr. C. Eales, architect:—

Haward	£4,200 0 0
Bellingham & Co.	3,978 0 0
Saunders	3,694 0 0
Phillips	3,678 0 0
Brown	3,595 0 0
D'Anson	3,565 0 0
Clark & Mannoch	3,550 0 0
Macey	3,543 0 0
Clemence	3,463 0 0
Longmire & Co.	3,441 0 0
Rudkin	3,123 0 0
Scrivener & White	3,104 0 0

For five cottages, shop, and public-house, at Merton, Surrey. Mr. J. W. Reed, architect:—

Smith	£1,285 0 0
Sleap	1,247 0 0
Green	1,200 0 0
Sale (accepted)	1,194 0 0

For two houses and shops at Hornsey-road. Mr. J. W. Reed, architect:—

Watson	£1,265 0 0
Sale	1,143 0 0
Smith	1,140 0 0
Sleap	1,079 0 0
Hill & Son	1,015 0 0

For widening and repaving the footway round Red Lion-square:—

Garrett & Stacey	£132 16 0
Tildesley & Son	123 13 0
Allen & Son	118 0 0
Clernie	97 14 0
Beevers	90 0 0
Rutty (accepted)	82 0 0

For the Borough Market, Southwark. Mr. E. Habershon, architect:—

Rider	£7,680 0 0
Colls & Co.	7,654 0 0
Gammon	7,287 0 0
Brass	7,227 0 0
Downs	7,163 0 0
Carter	6,993 0 0
Hill & Co.	6,582 0 0
Sawyer	6,240 0 0
Stap (accepted)	5,550 0 0

For additions and alterations to Wentworth House, near Headon:—

Sadds	£1,079 0 0
Tracey & Co.	977 0 0
Donne	887 0 0

For new schools and master's residence within the precincts of the Canterbury Cathedral. Mr. Austin, architect. Quantities supplied by the architect's clerk at a charge of three guineas for each set:—

Matthews	£6,900 0 0
Lancefield	6,299 0 0
Shrubsole, Stephen	5,890 0 0
Gaskin & Godden	5,846 0 0

For new malt-house and other works at Faversham, Kent, for Messrs. Shepherd & Mares. Mr. Adkins, architect. Quantities supplied by Mr. Rickman:—

Scoones	£3,451 0 0
Austin	2,958 0 0
Chinnock	2,917 0 0
Paine	2,624 0 0
Shrubsole, Lewis	2,599 0 0
Bonnett	2,527 0 0
Naylor & Son	2,513 0 0
Whiting	2,355 0 0
Creed & Broadbridge	2,263 0 0
Orpin	2,185 0 0
Shrubsole, Stephen	2,130 0 0
Jelt (accepted)	1,798 0 0

For the erection of ten cottages at Newington, Kent, for Mr. Edwards:—

Shrubsole, Stephen	£1,290 0 0
Seager	1,166 0 0
Bonnett	1,145 0 0
Ellis (accepted)	1,055 0 0

For drainage and other works at the Kent County Lunatic Asylum, Maidstone. Mr. Balmer, county surveyor. Quantities supplied by Mr. Ruck:—

Cobb	£1,104 0 0
Sutton & Vaughan	1,086 0 0

TO CORRESPONDENTS.

To obtain Heights of Chimneys.—Sir: Will some of your correspondents be good enough to point out the best method of obtaining the heights of chimneys which cannot be measured on the ground in the ordinary way?—W. H.

Wood lace in Churches.—A correspondent desires to know the means of ridding a church of this nuisance.

J. A. D.—J. H. M. D. T.—J. P.—R. W.—J. W. B.—J. F. H. (our opinion on *ex parte* statements, as against decision of Board of Works, would be of no use. Take proper advice).—J. B. J. S.—H. B.—P. C. H.—T. & Co.—H. H. (such inventions are mentioned when first made public. We cannot return to them).—J. W. & Sons.—J. W. R.—C. H. H.—Mr. R.—W. B.—S. S.

We are compelled to decline pointing out books, and giving addresses.

THE *Clerkenwell News*, October 27, speaking of Benson's Watches in the Exhibition, says:—"In Benson's great case are some fine specimens of engraved watch-cases, designed by the pupils of the Schools of Design. They are, perhaps, on the whole, the best specimens of engraved watch-cases in the Exhibition." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. Benson, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

A GREAT IMPROVEMENT IN STAINING CATHEDRAL CHURCHES, CHAPELS, LIBRARIES, HALLS, &c.; AND VERY IMPORTANT TO BUILDERS.—Among the most useful productions of modern inventions which have come under notice, "Mead's Patent Oak Stain" claims special attention from the trade; its superior excellence and relative convenience are unprecedented; and its chemical affinity admirably adapts it to the purpose. It entirely surpasses paint, is simple in use, and gives to deal and all white woods the most beautiful effect and shade of rich old oak unattainable by any other process; thereby it materially enhances the appearance of all woodwork. Those who have not yet used it, should not delay in giving it a trial. It is packed in a concentrated form, with directions, and can be conveniently forwarded, in any required quantity, to order, by T. J. Hogg, 3, Brunswick-place, City-road, London, N.—N.B. Further particulars of the preparation will be found advertised in this Journal.—[*Advt.*]

TO BUILDERS AND OTHERS. Very eligible LEASEHOLD BUILDING GROUND, 1 acre 2 roods 26 perches, Waterlo-place, High-road, New Cross, being in the midst of a well populated district, affording 695 feet of frontage, and well suited for the erection of 46 six-roomed houses, or a large manufactory. Lease 63 years. Ground-rent 30s. or 16l.

MESSRS. TEBB, BROS. will SELL the above ESTATE, estimated to produce a Ground Rent of 133l. per annum, by AUCTION, at the MART, on WEDNESDAY, MAY 13th, at ONE o'clock, in ONE LOT.—Plan and Particulars by Post; at the "Dover Castle," Broadway; the Mart; and 3, Adelaide-place, London Bridge, E.C.

WICK HOUSE, HACKNEY.—220 Fine TIMBER TREES, Poles, Espaliers, and Cordwood.

MR. A. RICHARDS will SELL by AUCTION, on the PREMISES, adjoining Victoria Park Railway Station, on THURSDAY, MAY 7, at ONE, to clear the ground for building purposes, 30 ELM TREES, many of large dimensions; 40 ash, 7 oaks, 50 horse-chestnuts, 18 aspen, part very large; 30 limes, 20 sycamores, 3 walnuts, 35 willows, &c. Also 1,000 poles, 2,000 faggots, and 50 stacks of cordwood.—Or view. Catalogues obtainable on the Premises, and of the Auctioneer, Tottenham.

CREWE.—FREEHOLD BUILDING LAND.

TO BE SOLD by AUCTION, pursuant to a decree of the High Court of Chancery, made in a Cause "Blakemore v. Edleston," by the Vice Chancellor Sir John Stuart, the Judge to whose Court the said Cause is attached, by

MESSRS. CHURTON, the persons appointed for that purpose, on FRIDAY, the 22nd day of MAY, 1863, at the CREWE ARMS HOTEL, CREWE, at TWO o'clock in the Afternoon, EIGHTY-SEVEN LOTS of FREEHOLD BUILDING LAND, of various dimensions, part situate between Mill street and the Railway Premises at Crewe, and abutting on new roads there leading to the Station, and part abutting upon the new road leading from Oak-street, Crewe, to Wistaston, and part abutting on an intended new street a continuation of Wistaston-street, and part on the Chester Line of Railway, and all in the immediate neighbourhood of the Railway Station of the Main Line, and of the Manchester, Liverpool, Chester, North Staffordshire, and Shrewsbury branches of the London and North Western Railway. Particulars and conditions of sale and plans may be had (gratis) on application to Messrs. FISHER & HODGES, Newport, Salop; HENRY HEANE Esq. Newport, Salop, and 12, Regent street, London; Messrs. PINNIGER and WILKINSON, 26, John-street, Bedford row; Messrs. GREGORY & CO. Bedford row; CHRISTOPHER CUFF, Esq. St. Martin's-lane, London; Messrs. BROUGHTON & HENSLEY, RICHARD C. EDLESTON, Esq., and J. BROADHURST, Esq. Nantwich, Cheshire; and Messrs. CHURTON, Auctioneers, Chester and Whitchurch, Salop; and at the Place of Sale. ALFRED HALL, Chief Clerk

WOODFORD RAILWAY.—The GROVE, WANSTEAD. Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

HEATHERHURST ESTATE, FRIMLEY, SURREY.—This Freehold Estate has been divided into LOTS suitable for the ERECTION of high-class VILLA RESIDENCES, so much in demand in the neighbourhood. It is on the road from Guildford to Frimley and Sandhurst, 3 miles from the camp at Aldershott, and within 3 miles of the Ash Station, and only 53 minutes by rail from London. It commands a beautiful view through a vast extent of varied and picturesque country, and is in the most healthy part of Surrey. The soil is chiefly gravel.—For plans and particulars apply to F. GOODCHILD, Esq. Guildford; or to J. C. PAIN, Esq. Solicitor, on the estate, and at York Town, Surrey.

BUILDING LAND at OXFORD.—The difficulty which has heretofore existed of procuring suitable sites for building private residences in and around Oxford is now overcome. A very fine estate, known as "Norham Manor," comprising upwards of 30 acres, belonging to the President and Scholars of St. John's College, is now being laid out for the purpose and TO BE LET, on BUILDING LEASES, for a term of 99 years, at moderate ground-rents. The land is situate within ten minutes' walk of the Colleges and public buildings in the city, while it possesses all the advantages of the country. The site is elevated, it has a subsoil of gravel, and a plentiful supply of pure spring water. Several lots have already been disposed of, and a few residences of a good character have been built. For particulars and to treat for the land, apply to Messrs MORRELL, BIDDLE, & HAWKINS, Solicitors; or to Mr. WILLIAM WILKINSON, Architect, Oxford.

FREEHOLD GROUND RENTS, CITY of LONDON.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 16th of JUNE next, at TWELVE o'clock precisely, to receive PROPOSALS for the PURCHASE of FREEHOLD GROUND-RENTS, on Premises let on Building Leases, having about eighty years unexpired, and severally situate Nos. 70 and 71, Watling-street; Nos. 76 and 77, Newgate-street; and No. 4, Maidenhead-court, Aldersgate street; particulars and plans of which may be had at this office, together with the conditions of sale. Tenders must be sealed, endorsed outside, "Tender for Ground Rent," and addressed to the undersigned at this Office, and must be delivered in before TWELVE o'clock on the said 16th of JUNE next. The Commissioners do not bind themselves to accept any Tender unless the same shall be deemed eligible. Parties tendering must attend personally or by an authorised agent on the day of treaty, and be then prepared (if their Tender be accepted) to pay the required deposit of 10 per cent. and to execute an agreement for the completion of the purchase agreeably to the conditions of sale.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, April 20, 1863.

NEAR BRIGHTON.—FREEHOLD LAND TO BE LET or SOLD, for Building Villas, in a pleasant Village about three miles westward of Brighton, close to a railway station. Situation dry and healthy. The land will be let at a very moderate price, with easy terms of payment. Also an extensive and desirable WATERSIDE FRONTAGE TO BE LET, for Ship Building or Wharf.—Apply to Mrs. E. HALL, Southwick, near Brighton; or to H. F. HALL, No. 3, St. Mildred's court, Poultry, London.

FREEHOLD LAND at SYDENHAM, about ten minutes' walk from the London and Brighton Railway-station.—To BE LET, on Building Lease, a Piece of LAND, having a frontage to the road leading to Beckenham of about 600 feet, and a depth of about 270 feet. Land-tax redeemed.—Apply to Messrs. PATERSON & LONGMAN, Solicitors, 3, Winchester-buildings, Great Winchester-street, London, E.C.

TO BE LET, on a Building Lease, at Chelsea, a PIECE of GROUND, in a first-rate situation, calculated for the erection of a public house, for which it is peculiarly eligible (being close to the New Barracks), and nine shops. About 222 feet frontage to the New Bridge-road, and about 22 feet 6 inches in Queen's-road East.—For particulars inquire on the Premises; or at No. 134, Queen's-road East.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

BUILDING LAND TO BE LET or SOLD, at Sydenham, near the Church, the Railway Station, the Crystal Palace and Park. It fronts a wide, handsome roadway, and has ample depth for garden grounds. All the houses on the estate are of a good class, and the rents obtained give an average return of 12 per cent. on the outlay. The remaining frontage will be let at a low rent, to secure the ground being speedily covered.—Terms and particulars of Messrs. EDWIN FOX & BOUSFIELD, Land Agents, 41, Coleman street, Bank, E.C.

BUILDING LAND TO BE LET, at Canonbury (Marquess-road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also at Edward's-row, Bow, some caravans for completion. The usual advances of money to respectable parties.—Apply at the Offices of Mr. J. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

SUSSEX.—TO BE SOLD, that beautiful FREEHOLD ESTATE and PLEASURE FARM called Purchase Manor, situate in the picturesque country near Ditchling. It contains an excellent mansion house, commanding extensive views, with twelve bedrooms and suitable reception-rooms, library, conservatory, coach house, stables, walled garden, and shrubberies: also a steward's house annexed, and 262 acres of land. On the verge of the estate is an excellent newly erected eight roomed house, and twenty acres of land, on which is a pottery and brickyard of great repute in the neighbourhood. The brick earth is of good quality, and is believed to underlie the whole estate. The whole is within a ring fence, and has been alle-drained except twenty acres. Good shooting and fishing.—For particulars and cards to view, apply to Mr. TOOTELL, Edgware, N.W.

TO CONTRACTORS, BUILDERS, and OTHERS.—TO BE LET, TWO BRICKFIELDS, yielding a large return and good profit, situate within twenty miles of the metropolis, and within a mile of a railway station.—For particulars apply to Mr. REARDEN, 91 and 92, Piccadilly.

TO BE LET, at Newington Butts, Surrey, a MANUFACTORY, with Steam Engine (about 8 horse hight preserve), now in use for lead and colour grinding; also, a small DWELLING-HOUSE. Will become vacant at Midsummer. May be seen and terms known on application to Mr BROWN, 6, High-street, Newington Butts: or at 4, Adams-court, Old Broad-street, City

TO BREWERS, BUILDERS, PUBLICANS, and OTHERS.—TO BE SOLD a 99 years LEASE of an eligible Site for a Public house, adjoining Cherry-garden Pier, with frontage to the river. Lic-nse secured.—Apply to Mr. W. G. CLIFT, Lucas & Spencer's Wharf, Bermondsey Wall, S.E.

A BARGAIN.—TO BE SOLD, a PLOT of FREEHOLD LAND, 60 feet frontage, 200 feet deep. Within five minutes' walk of Forest-hill Station. With a quantity of building materials, joiner's work, bench, &c.—For particulars, apply to J O 4, Freel street, Paddington

PENZANCE, CORNWALL. The FEE SIMPLE, in hand, of NINETEEN ACRES of first class BUILDING GROUND, all within 600 yards of the beach, and commanding full view of the sea, and adjoining the town of Penzance, will be SOLD, in lots, by AUCTION, at Penzance, on FRIDAY, JUNE 5th, 1863. The fee simple, subject to a lease now hanging on a life of eighty-one, in 8 Acres of Building Ground in Penzance, will be sold in lots by auction at the same time. The whole of this ground is at present under cultivation as market-garden ground for early broccoli and early potato crops.—For particulars apply to RODD & CORNISH Solicitors, Penzance

Penzance, April 23rd, 1863.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground.—TO BE LET on lease, direct from the freeholder, for a building term if desired, conveniently-placed MANUFACTURING PREMISES, situate at West Ham Abbey, Essex, a few minutes' walk from the Stratford Bridge Station of the North Woolwich Railway, and with waterside frontage next the Channel Sea River. The ground contains a site of about one acre, the buildings are spacious ground floor erections, and there is a hands-me and lofty brick chimney shaft.—For particulars, apply to Messrs FULLER & HORSEY, 13, Billiter street, London, E.C.

INDIA-RUBBER MILL BANDS, WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.

A STOCK OF THE ABOVE ALWAYS ON HAND.

Also as to the Tuning, &c of Organs in all parts of the country. Church Organs of any size built, enlarged, or revoiced, as wel. as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 107 and 108 (late 117 and 118), Union-street, Borough, London; and of all respectable Ironmongers, Builders, &c.

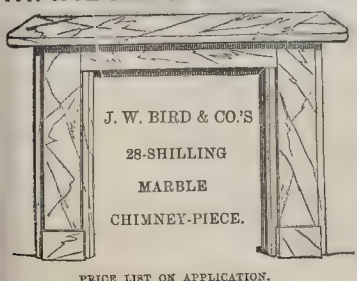
IMOPRTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.
VIEILLE MONTAGNE ROOFING ZINC.



Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.
JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

MARBLE & STONE CHIMNEY-PIECES FOR THE MILLION.

PRICE LIST ON APPLICATION.

A Stock of 500 always to choose from at
J. W. BIRD & CO.'S,

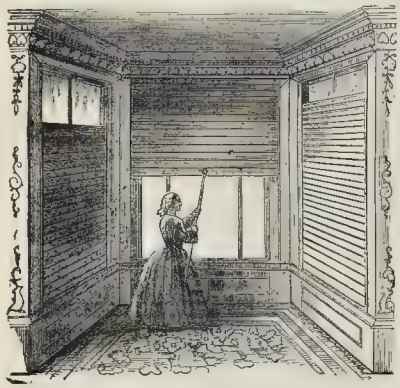
CLARK & CO. PATENTEES,

And Manufacturers to the Honourable Board of Works,

15, GATE STREET, LINCOLN'S INN FIELDS, LONDON,



AND 4, MARKET STREET, MANCHESTER.

CLARK'S Patent Self-Coiling Iron Shutters, 3/ per Foot.

CLARK'S Patent Self-Coiling Wood Shutters, 2/6 per Foot.

The utility of Revolving Shutters for closing Shop Fronts, Windows of Private Houses, Fireplaces, and every description of opening, is universally acknowledged; but the cost has hitherto prevented their general adoption. This objection Messrs. CLARK & CO. have met by introducing their PATENT SELF-COILING SHUTTERS, in Steel, Iron, and Wood, which, in addition to being less expensive than the ordinary shutters, have the advantage of being remarkably simple, and, consequently, not liable to get out of order. The Wood Shutters are constructed of laths of wood rebated together, having numerous mortises, through which pass a series of tempered steel bands, causing the Shutters to be Self-Coiling, and rendering them proof against Burglars.

CLARK'S PATENT SELF-COILING STEEL SHUTTERS, 3/6 per Foot.

The New Patent Revolving Safety Shutters are made of *Steel, in one sheet* (without either chain, links, rivets, or pins); the steel is corrugated transversely, which gives the appearance of laths, and enables them to be coiled into a small space. The corrugations render the Shutter exceedingly rigid, transversely and remarkably pliable, and self-coiling longitudinally. They are light, and can be pushed up and drawn down without the aid of machinery of any description. It is absolutely impossible for them to get out of order.

From the strength and hardness of the material of which they are composed, and being in *one sheet*, they cannot either be cut or broken through, as there is no opening or a lever or other instrument to be inserted as in the ordinary lath shutter, rendering them doubly secure, as any attempt to break through or open them will give an immediate alarm through the building. Their numerous advantages, coupled with the lowness of price, must insure their universal adoption, both in SHOP FRONTS and PRIVATE HOUSES.

These Shutters are Manufactured solely by the Patentees, Messrs. CLARK & CO. and are the only Revolving Shutters made that do not require machinery or gearing apparatus, while the cost is the same as the ordinary Lifting Shutters.

BRASS SASH BARS, STALL-BOARD PLATES, AND SUN BLINDS FOR SHOP FRONTS.

PROSPECTUSES AND WORKING DRAWINGS FORWARDED FREE ON APPLICATION.

Architects should be particular in describing the description of Shutter they require used.

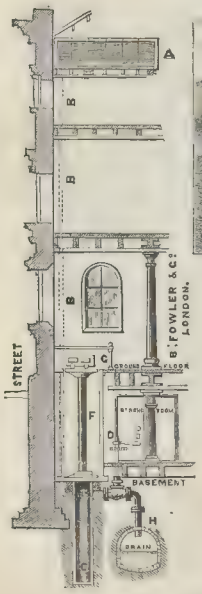
Portable Steam Engines, Powerful Single and Double-Barrel Pumps, Centrifugal Pumps, and Boring Tools for Contractors' Purposes, ON HIRE.



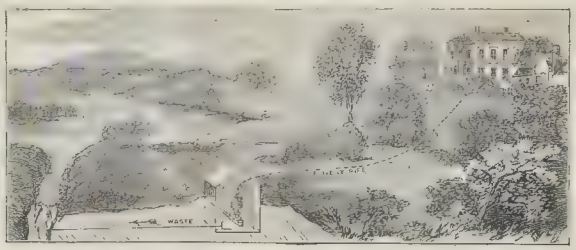


Fig. A.

THE LANDSCAPE SKETCH ABOVE SHOWS

THE IMPROVED HYDRAULIC RAM.

This is a simple Self acting Machine for Raising a constant supply of Water for Use in Public or Private Establishments where a fall can be secured from a Stream, Brook, Springs. Messrs FOWLER have fixed a great many by trust. Rams in various parts of the country, for raising from 6/6 to 6,000 or more gallons per day to elevations varying from 40 to 600 feet, and forcing through main pipes from 50 yards to several miles in length. The fullest particulars and estimates will be handed on application.

No. 37 SHOWS A SET OF

TREBLE-BARREL PUMPS WITH HORSE GEARING,

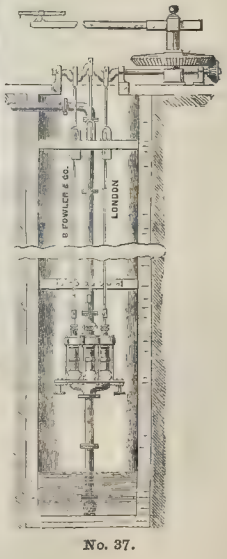
For Raising Water from DEEP WELLS for the SUPPLY of TANKS in MANSIONS and PUBLIC BUILDINGS. Messrs. FOWLER also Manufacture all the Various Other Forms of Pump for Deep or Shallow Wells for Hand or other Power.

Fig. A SHOWS

A HYDRAULIC LIFT,

Worked by Pressure from a Cistern, Supply, for Raising Warehouses, and other Hoist Lifts. Messrs FOWLER also Manufacture such Lifts to be worked by Hand Pumps, where pressure cannot be obtained from a Cistern.

BENJAMIN FOWLER & CO.

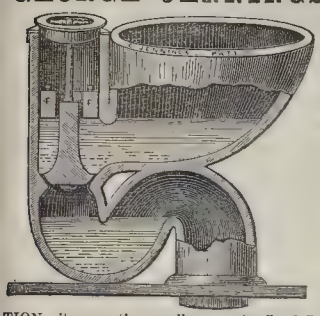


MANUFACTURE AND ERECT EVERY DESCRIPTION OF ENGINEERS' WORK REQUIRED IN PUBLIC OR PRIVATE ESTABLISHMENTS, SUCH AS

PUMPS FOR ANY PURPOSE,

ON THE LARGEST OR SMALLEST SCALE, STEAM ENGINES, WATER WHEELS, TURBINES, HOISTS, WARMING AND DRYING APPARATUS, BATHS, GAS WORKS, AND FITTINGS

ESTIMATES WILL BE HANDED ON APPLICATION.



PRICE LISTS OF PUMPS FREE BY POST.

No. 37.

NOTICE OF REMOVAL.

GEORGE JENNINGS, HYDRAULIC AND SANITARY ENGINEER,

begs to inform ARCHITECTS, ENGINEERS, and OTHERS interested in SANITARY PROGRESS, that the London, Chatham, and Dover Railway Company have taken his Wharf and Factory, Holland-street, for their New Station at Blackfriars, and that his Works for the future will be carred on at

PALACE WHARF, STANGATE, LAMBETH,

opposite the River Front of the New Houses of Parliament.

The well-known character and great demand for all GEORGE JENNINGS'S Manufactures have rendered it unnecessary for him to advertise for the last two years; he, however, takes this opportunity to state that during that time he has added many Sanitary and Domestic Articles to those already before the public, some of which gained the Medal of 1851, and more recently the Exhibition Medal of 1862; the latter being awarded to him for "GENERAL Excellence of Articles exhibited and for Novelty of Application."

Jennings's Patent Tip-Up Lavatories, Water Closets, Urinals, and other sanitary appliances will be found in use on eighteen different Railways in England, on the East-Indian Lines, at many Stations, on the Paris, Orleans, and other Continental Railways; and in every Hotel, Hospital, Asylum, Prison, or other public building of importance throughout the Kingdom.

GEORGE JENNINGS would call particular attention to his

EXHIBITION VALVE CLOSET AND TAP,

(in one piece of earthenware), as above shown. It is ENTIRELY FREE FROM ALL COMPLICATION; it saves the usually expensive Lead D Trap, Service Box, Cranks, and Wires; it is noiseless in action; and most durable and efficient.

JENNINGS'S PATENT TIP-UP LAVATORIES, in a sanitary point of view, are much to be preferred, as the contents, after use, are thrown direct from the basin, leaving no deposit, which is often the means of communicating disease.

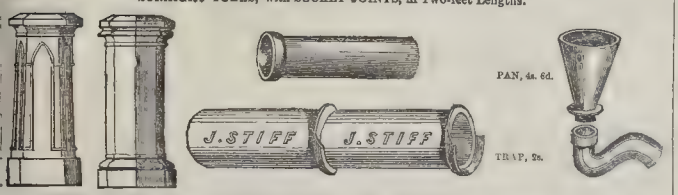
GEORGE JENNINGS has also invented a TIP-UP CLOSET, which for Basements, Cottages, &c., will be found most suitable: they are sold complete, with seat, for 63s. each.

JENNINGS'S PATENT DRAIN-PIPES

Are the only DRAIN-PIPES that MECHANICALLY PERMIT EXAMINATION, or LEGALLY PERMIT THE INTRODUCTION OF SADDLE JUNCTIONS. IN SPITE OF THE STRONGEST TRADE COMBINATION THAT EVER EXISTED, BAD COPIES OF HIS ORIGINAL INVENTION, AND DISCOUNT REACHING 50 PER CENT., the DEMAND for these PIPES is STEADILY INCREASING.

JENNINGS'S PATENT AIR CHAMBER SMOKE FLUES, TERRA-COTTA and STONEWARE AIR BRICKS, PUMPS for Shallow or Deep Wells, Sluice Valves for Steam, Water, or Gas, Fire Cocks, Hydrants, Shop Shutter Shoes, Family Jars, &c. are now in course of arrangement, at his New Sanitary Depôt, and he hopes, by continued attention to the requirements of the age, to deserve that large share of support he has hitherto been favoured with.

GEORGE JENNINGS, Sanitary Engineer, PALACE WHARF, STANGATE, LAMBETH, S.



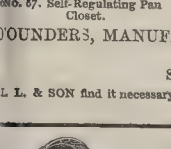
JAMES STIFF & SONS,

MANUFACTURERS OF GLAZED STONEWARE DRAIN-PIPES, WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES; ALSO

IMPERISHABLE TERRA-COTTA CHIMNEY-TOPS, FLUE-PIPES, COPINGS, GARDEN EDGINGS, &c.

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with SOCKET JOINTS, in Two-feet Lengths.



HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

Manufacturers also of

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted also for ventilation of Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

THOMAS LAMBERT & SON,

No. 1. Lambert's Ball Valve.

No. 6. High-Pressure Bib Valve.

High-Pressure Stop Valve.

No. 57. Self-Regulating Pan Closet.

FOUNDERS, MANUFACTURERS, AND PATENTEES OF THE HIGH-PRESSURE VALVE COCKS,

SHORT STREET, NEW CUT, LAMBETH, S.

T. L. & SON find it necessary to state that all the Ball and other Valves manufactured by them, have their NAME legibly marked thereon.

is the only PERFECT, SIMPLE, and really EFFECTIVE INVENTION by which Drains can be MINUTELY EXAMINED AT ANY TIME (the obstructions removed, and CAP-JUNCTIONS of any size inserted (in the event of further connections being required) without breaking a pipe, or disturbing the flow of sewage.

They require no more labour in the laying down, and are supplied at the same price as the ordinary Socket Pipes.

SALT GLAZED STONEWARE SOCKET DRAIN PIPES, INVERT BLOCKS, &c.

Every Article required for DRAINAGE and SANITARY PURPOSES supplied on the lowest terms direct from the BOURNE VALLEY WHARF, NINE ELMS, S.; or from the WORKS, near POOLE, DORSET.

Illustrated Lists with full Particulars and Prices may be obtained of

WILLIAM STANDING, BOURNE VALLEY WHARF, NINE ELMS, LONDON, S.

A GOOD DRAWING-DOCK AND LANDING WHARF.

*** Specimens of CREEKE'S PATENT PIPES may be seen at the Architectural Exhibition, 2, Conduit-street, Regent-street, W.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6949.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

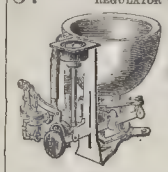
UNDERHAY'S PATENT

REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.

TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,



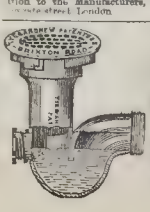
F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves Gas Meters, &c. on the same premises.

CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.



Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

TYE & ANDREWS'

NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

SALES BY AUCTION.

INTERNATIONAL EXHIBITION BUILDING, 1862.

MESSRS. FULLER & HORSEY are instructed by Messrs. Kelk & Lucas to SELL by AUCTION, on THURSDAY, MAY 7th, and following days, at ELEVEN o'clock each day, at the BUILDING, in suitable lots, the MATERIALS of the WESTERN ANNEX, which have been carefully taken down, and stacked in convenient lots, including fully taken down, and stacked in convenient lots, including fully taken down, and stacked in convenient lots, including f

The Builder.

ROYAL HORTICULTURAL SOCIETY.
19TH JUNE, 1863.

CEREMONIAL TO BE OBSERVED AT UNCOVERING the MEMORIAL of the EXHIBITION of 1851, and STATUE of H R H. the PRINCE CONSORT, in the presence of their RR.HH.'s the PRINCE and PRINCESS OF WALES and other Members of the Royal Family.

The Guests invited to take part in the procession will assemble at the West Dome of the Exhibition Building.

While assembling Military Bands will play.

The Royal party will be received at the West Dome entrance by the Executive Committee of the Memorial Committee.

Their RR.HH.'s will proceed down the Nave to a Balcony over the Southern Entrance of the Horticultural Gardens and their arrival will be announced by a flourish of trumpets. "God Save the Queen" will be played by three Military Bands united in the Arabe Garden.

The Council of the Horticultural Society will present an Address. Military Bands will again play.

After which the Memorial Committee will read an Address.

H.R.H. the Prince of Wales will order the UNCOVERING OF THE MEMORIAL, which will be announced by a flourish of trumpets and a salute of Artillery, after which Military Music will be performed and the Fountains will play.

The Royal Party, headed by the Procession, will then walk round the Gardens, stopping at various points to see the Memorial and the Garden.

The route will be marked by barriers and banners; and it is requested that during the Procession the Spectators will remain stationary.

In the event of rain, the line of Procession will keep under the cover of the Arcades.

The Exhibition Building will be thrown open to the Visitors.

GEORGE GODWIN, Hon Sec Memorial Committee.
W. W. SAUNDERS, Hon. Sec. of the Horticultural.

ROYAL HORTICULTURAL SOCIETY.

COMPETITIONS.

ROYAL MASONIC INSTITUTION for BOYS, Lordship-lane, Wood Green, Tottenham.

Patron—HER Most Gracious Majesty the Queen.

President.—The Right Hon. the Earl of Zetland, K.T., M.W.G.M.

PLANS and DESIGNS for a projected NEW BUILDING for One Hundred Boys.—The House Committee of this Institution have it in contemplation to erect a new building on their own freehold property situate as above; but before coming to a final decision on the subject are desirous of having placed before them ample materials for the guidance of their judgment. They therefore offer to such architects as may think proper to send in plans, three premiums of £50 and 30s. respectively, for PLANS and DESIGNS for a BUILDING, with every necessary accommodation for 100 Boys, with the requisite educational and domestic staff. The Drawings of the three selected and premiated Designs to be the absolute property of the Committee. The Committee will not bind themselves to adopt either design, but will be at liberty to modify either premiated Design in any way they may think proper, to employ any architect they may select, and to erect the Building in sections or otherwise as they may think best. The sum proposed to be expended is £5000. The Drawings to be sent in to the Office, addressed to the Committee, care of the Secretary, not later than TUESDAY, the 26th INSTANT. Full instructions and every information may be obtained on application to the Secretary as under, on and after THURSDAY, the 14th instant.

FREDERICK BINCKES, Secretary.

Office, 16a, Great Queen street, W.C. May 8th, 1863.

CHELTENHAM PARISH CHURCH.—Architects intending to send in DESIGNS for the above competition can have photographic and figured sketches of present church, with all other necessary information, upon application to W. H. care of Mr. Armstrong, 71a, King's-road, Chelsea.

TO GLASS STAINERS.—ABBEY CHURCH, BATH.—Persons willing to give DESIGNS and TENDERS for a MEMORIAL WINDOW to the late Bishop Carr, to be placed at the east end of the choir of Abbey Church, are requested to forward designs and estimates (including carriage and fixing) to Mr. RICHARD HOBERT, Bay Hill House, Bath, before the 1st of JULY next. The size of the window is 20 feet wide by 56 in height, including the mullions and tracery. The design not to include any human figures, but in other respects is left open to the suggestion of the artist. No pledge is given to accept the lowest or any Tender.—For further particulars, apply to Mr. RICHARD STOTHERT.

CONTRACTS.

TO CONTRACTORS and OTHERS.—The Local Board for the district of Chorley (Alderley Edge), Cheshire, are desirous of receiving TENDERS for the EXECUTION of CONTRACT No. 1, being the necessary WORKS in making a MAIN-OUTLET SEWER.—Specifications, with plans and sections, may be obtained at the Office of the Engineer to the Board, Mr. B. C. TRAPP, 18, Cooper street, Manchester, on payment of £1s on and after the 1st MAY. Sealed Tenders, endorsed "Tender for Contract No. 1," must be left at the Office of the undersigned, 15, Cooper-street, Manchester, on or before THURSDAY, 14th MAY.—The Board do not bind themselves to accept the lowest Tender. Dated this 22nd April, 1863. W. L. WELSH, Law Clerk to the Board.

FAKENHAM CHURCH, NORFOLK.—TO BUILDERS.—Such Masons, Carpenters and Joiners, Plumbers and Glaziers, Slaters and Painters, as are willing to TENDER for RE-ROOFING and RE-SEATING the Parish Church at Fakenham, may inspect the drawings and specifications at the School House, Fakenham, on application to the Rector or Churchwardens, from the 11th to the 2nd instant, both inclusive. Sealed Tenders are to be delivered to the Rector, on or before 23rd of MAY, at SIX p.m. Security will be required for the due performance of the contracts; and it is hereby notified that no pledge is given to accept the lowest or any Tender. Schedules of quantities may be obtained on application to Mr. B. WORMALD, at the Architects' Office, on and after the 16th MAY.—By order of the Committee,

J. B. & WM. ATKINSON, Architects.

93, Micklegate, York, May 2, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.

NOTICE to BUILDERS.—Tenders are required for REPAIRING, PAINTING, WHITEWASHING, &c. the interior of the BUILDINGS in the west rear range, ROYAL ARTILLERY BARRACKS, WOOLWICH.

Parties desiring to Tender for the execution of these works, must leave their names at the Office, on or before the 14th day of MAY, 1863, and pay the sum of 10s. 6d. for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Woolwich, April 24, 1863.

LONDON DISTRICT.—To BUILDERS and OTHERS.—WAR DEPARTMENT TRIENNIAL CONTRACTS for WORKS and REPAIRS.—The Commanding Royal Engineer, London District, hereby gives Notice that sealed TENDERS will be received at the War Office, Pall-mall, London, S.W. addressed to the Director of Contracts, on or before 21st MAY, 1863, for WORKS and REPAIRS at the undermentioned Stations, from 1st JULY, 1863, to 31st MARCH, 1866, inclusive, viz.:—

London, comprehending Tower of London, and all the barracks or other buildings within 5 miles of that place.

Schedules and printed forms of Tender, price 7s. 6d. each, and all necessary information, may be obtained on application at the Royal Engineer Office, 11, James-street, Buckingham Gate, London, S.W. from THURSDAY, the 23rd day of APRIL, until THURSDAY, the 14th day of MAY, 1863, inclusive, between the hours of ELEVEN a.m. and THREE p.m.

The Secretary of State reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, 11, James-street, Buckingham-gate, London, S.W. 17th April, 1863.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for ERECTING the GARRISON POINT COAST GUARD STATION at Sheerness, in the county of Kent, may inspect the Drawings and Specification at the Custom House at Rochester or at this Office, between the hours of TEN and FOUR, from WEDNESDAY, the 13th to WEDNESDAY, the 27th inst. now next ensuing and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at Noon of the 28th inst. under seal and directed to the Commodore Controller General of Coast-Guard, and endorsed "Tender for Garrison Point."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 4th day of May, 1863, at the Admiralty,

Coast-Guard Office, 12, Spring gardens, London, S.W.

NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the Erection of a COAST GUARD STATION at Pendeen Cove, near Penzance, in the County of Cornwall, may inspect the Drawings and Specification, at the Coast Guard Watch-Room, Penzance; or at this Office, between the hours of Ten and Four, from WEDNESDAY, the 13th, to TUESDAY, the 26th inst. now next ensuing, and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of WEDNESDAY, the 27th inst. under seal, and directed to the Commodore Controller-General of Coast Guard, and endorsed "Tender for Pendeen Cove."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest, or any of the Tenders

Dated this 4th day of May, 1863, at the Admiralty

Coast Guard Office, 12, Spring gardens, London, S.W.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the county of Essex, are prepared to receive TENDERS for LAYING and CONNEXION of HOUSE DRAINS to the Public Sewers, and other Works. The whole of the Tenders and Contracts are to be in accordance with Conditions, Specifications, Plans, Sections, and Details, which may be examined any day at Rokeby House, in Stratford, at the Office of Mr. MARSHALL, the Surveyor to the Board, and the Tenders must be delivered at my Office at Rokeby House, not later than MONDAY, the 11th day of MAY next.—By order of the Board, CHAS. WILSON, Clerk.

Rokeby House, Stratford, E. April 24th, 1863.

TO BUILDERS.—Plans and Specifications for RESTORING and REPITING the PARISH CHURCH at Turweston, near Blackley, in the county of Northampton, may be inspected at the Rectory House, Turweston, till SATURDAY, the 23rd MAY, Sundays excepted. Persons desirous of CONTRACTING for the Execution of the above Works must send in sealed Tenders, directed to the Rev. W HARLEY, Turweston, Brackley, on or before the 23rd MAY. The lowest or any Tender will not be necessarily accepted.

Turweston, May 4th, 1863.

NOTICE.—TENDERS will be received by the Director of Contracts for CLEARING OUT about 1,700 tons of MUD, &c. from the War Department Camber, at Sheerness.

Parties desiring to Tender, can obtain full particulars and form of Tender, on application to the Office, between the hours of TEN and FOUR, till 16th MAY inst.

No Tender will be received after 20th MAY, and the Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Sheerness, May 4, 1863.

THE Directors of the Great Central Gas Company are prepared to receive TENDERS for the TAR manufactured at their Works for the Year ending 1st JULY, 1864.—Particulars as to quantity and delivery may be obtained on application to the manager, at the Works, Bow-common-lane. Tenders to be sent in on or before WEDNESDAY, the 10th of JUNE next.

28, Coleman-street, E.C. 5th May, 1863.

[*For remainder of Contracts see next Page.*

CONTRACTS.

TO BUILDERS.—TENDERS are required by Messrs SOUTHERN & COLE for the ERECTION of a PAIR of HOUSES proposed to be built in Drawings and specification can be seen on application to Mr SIXTUS DYBALL, Architect, 18 Bucklersbury, Cheapside, where Tenders are to be delivered on THURSDAY, 14th inst. at FOUR p.m.—N.B. Messrs S. & C do not bind themselves to accept the lowest or any Tender, and builders must be prepared with references and security, should either be required.
April 27th, 1863

NORTH-EASTERN RAILWAY. — To CONTRACTORS, BUILDERS, IRONFOUNDERS, &c.—The Directors are prepared to receive TENDERS for the ERECTION of a GRAIN and GOODS WAREHOUSE at the Tyne Dock, near South Shields. Plans, specification, &c. may be seen, and all information obtained on and after the 4th of MAY, on application to Mr. PROSSER, Architect to the Company, Newcastle-on-Tyne. Tenders, addressed to the Secretary, to be delivered at York not later than FOUR p.m. on WEDNESDAY, the 20th of MAY. Quantities will be supplied. The Directors do not pledge themselves to accept the lowest or any Tender. J. CLEGHORN, Secretary.
York, 24th April, 1863.

TO BUILDERS.—HOLDGATE, in MUCH WENLOCK, SALOP.—Plans, specification, conditions of contract, and quantities for the CARCASE of a NEW PARSONAGE-HOUSE, for this parish, may be seen on and after MONDAY, the 11th of MAY, at Mr EAVES, Farmer, Stanton Lacy, Much Wenlock, Salop, and Prudence-cott, on or before SATURDAY, the 23rd MAY, to my office as below.—The lowest or any Tender not necessarily accepted. JOHN F. SEDDON, C.E., Whitehall, London

LONDON MECHANICS' INSTITUTION.—TENDER for REPAIRS.—The Committee of this Institution will be glad to receive TENDERS for the REPAIRS to be done, comprising BUILDERS' and CARPENTERS' WORK. Copies of the specification to be obtained on application to the Secretary, price 2s.
29, Southampton-buildings, 7th May, 1863.

TENDERS are required for making a ROAD at Teddington, Middlesex, according to Plan and Specification which may be seen at the Office of Messrs. SYMPSON & WARNER, No. 7, Golden-square, to whom Tenders are to be sent, on or before the 20th MAY. The lowest or any Tender will not necessarily be accepted

TENDERS for the REMOVAL and DESTRUCTION of DISEASED MEAT.—The Commissioners of Sewers of the City of London, at their meeting in the Council-house of the said City, on TUESDAY, the 19th of MAY, 1863, at TWELVE o'clock precisely, to receive TENDERS for the REMOVAL and DESTRUCTION of MEAT and POULTRY condemned in the City of London as unfit for human food.—Particulars of the terms of the contract to be entered into may be seen at the Office, and the Tenders must be delivered before TWELVE o'clock on the day of treaty, at which time the parties setting in proposals must attend personally or by a duly authorized agent. JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, May 5th, 1863.

TO BUILDERS.—A Gentleman desires to BUILD THREE HOUSES, for occupation, on leasehold land, and wishes to meet a Builder who would complete them in consideration of the Cost of Erection and Interest being paid by Five Annual Instalments.—Address, in the first instance, to W. Q. care of Messrs. Hooper & Cull, 12, George-street, Mansion House, London, E.C.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent, for the ERECTION of POLICE-STATIONS at Tunbridge and Whitstable, may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day, except Sunday, between the hours of TEN and FIVE. Each Station is to be described separately, agreeably to the form of Tender to be obtained at the County Surveyor's Office, where sealed Tenders are to be left for Tunbridge Police Station, or "Tender for Whitstable Police Station," as the case may be delivered by SIX o'clock, p.m. on MONDAY, the 25th inst.; and persons tendering are to be in attendance at the Courts of Justice, Maidstone, at HALF-PAST TWELVE o'clock on TUESDAY, the 26th inst. Neither the lowest nor any other Tenders will be accepted unless approved of and parties approved security will be required for the performance of the several contracts.
H. A. WILDES, Clerk of the Peace.
Maidstone, May 4th, 1863.

TENDERS are required for the ERECTION of a detached VILLA RESIDENCE, proposed to be erected in Bonney lane, Islington. Drawings and specification can be seen between the hours of TEN and FOUR, at the Office of the Architect, Mr. J. W. REED, 4, Shaftesbury-terrace, Hornsey-road. Tenders to be delivered, as above, on the 18th of MAY, at FOUR o'clock p.m. The lowest or any Tender will not necessarily be accepted.

TO BUILDERS.—NEW SCHOOLS at STEVENTON, BERKS. Persons desiring to TENDER for the above buildings may see the Plans and Specifications at the Vicarage, Steventon, between the hours of NINE and FIVE, on and during the 18th, 19th, and 20th of MAY. The Tenders to be sent in by JUNE 1st. No pledge is given that the lowest or any Tender will be accepted. The site of the buildings is within a short distance of the Great Western Railway.

THE CRAY'S GAS-LIGHT and COKE COMPANY (Limited).—Contractors are invited to TENDER for the erection of new GAS-WORKS for this Company. The Plans and Specifications may be seen on and after Tuesday, the 12th inst. at the Offices of WILLIAM MAY, Esq., St. Mary's Cray, and 2, Adelaide place, London Bridge; or at the Office of the Company's Engineer, Mr. ALFRED PENNY, Wenlock Iron Works, Wharf Road, City Road. The words "Gas-Works" to be endorsed on the Tenders of Builders and Engineers' Work, but may be Tendered for in one Contract. Tenders to be endorsed, "Tender for Gas-Works," and sent to the Secretary, WILLIAM MAY, Esq., 2, Adelaide place, London Bridge, on or before TUESDAY, the 26th inst.

TO PAVIOURS and BRICKLAYERS.—The Burial-Board of the Parish of Saint Mary, Newington, will meet in the Vestry Room of the Parish Church, on FRIDAY MORNING, the 15th MAY instant, at HALF PAST NINE o'clock, to receive and consider TENDERS for the DRAINAGE and REPAVING of the PARISH CHURCHYARD, NEWINGTON-BUTTS. A plan and specification of the work to be done may be seen at my Office, as under. The Board do not bind themselves to accept the lowest Tender.—By order,
JOSEPH BURGESS, Clerk to the Burial Board.
1, Keene's Row, Walworth, May 7, 1863.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY. To BUILDERS and CONTRACTORS. The Directors of the London, Brighton, and South Coast Railway Company are prepared to receive TENDERS for the erection of a NEW STATION, with Clerk's House, and Platform Sheds, at the Ballast-hill Station, on the West Brighton Crystal Palace Branch.—Drawings and specifications will lie for inspection at the Office of Mr. JAMES HOUGH, C.E., No. 7, Parliament-street, Westminster, on and after MONDAY, the 18th instant; and Tenders must be delivered to the undersigned, at the London Bridge Terminus, on or before NOON, TWELVE o'clock, on MONDAY, 1st JUNE next. The Directors will not be bound to accept the lowest or any Tender.
FREDERICK SLIGHT, Secretary.
London-bridge Terminus, 6th May, 1863.

TO BUILDERS. —STOCKBRIDGE NEW CHURCH, Hants.—The TIME for sending in the TENDERS is EXTENDED from the 8th to the 13th inst. Bill of quantities may be had on application to Mr. HOWELL, Surveyor, Hanover-buildings, Southampton. JOHN COLSON, Architect.
May 9th, 1863.

SUTTON ROYAL HOTEL.—To BUILDERS.—Builders desirous of TENDERING for the ERECTION of the above building are requested to send in their names to the Architect Mr. EDWARD HOLMES, 4, Waterloo-street, Birmingham, on or before MONDAY, the 18th instant.
May 6th, 1863. (Signed) HODGSON, ALLEN, & HODSON, Solicitors to the Company

WEST DERBY UNION NEW WORKHOUSE. To BUILDERS and OTHERS.—The Guardians are prepared to receive TENDERS for the proposed NEW WORKHOUSE, intended to be built on a site in Walton-on-the-Hill, near Liverpool. Plans and specifications may be seen at the Office of Mr WILLIAM CULSHAW, Architect, Rainford place, Liverpool, on and after MONDAY, the 4th day of MAY next. The quantities are being taken out by Mr. GEORGE HOLME, Surveyor, Leyland Chambers, Moorfields, Liverpool, and a copy will be furnished on the payment of 1l. 1s., which sum will be returned to the unsuccessful competitors after the contract is signed. Sealed Tenders to be delivered at my office on or before TUESDAY, the 19th day of MAY next, endorsed, "Tender for the West Derby Union Workhouse." The Guardians do not pledge themselves to accept the lowest or any of the Tenders. The Contractor will be required to join the two sufficient sureties who will be bound with him in the due performance of the Contract.
WILLIAM CLEAVER, Clerk to the Guardians.
Liverpool, April 28, 1863.

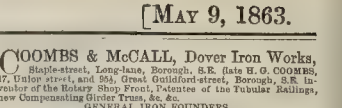
TENDERS are required for REPAIRS and ALTERATIONS in the "Three Tuns." Public House, 12, Cross-street, Hatton-garden.—Apply on the premises for particulars.

BICESTER MARKET END LOCAL BOARD.—To CONTRACTORS for SEWERS and OTHERS.—The Local Board for Bicester Market End, in the county of Oxford, are prepared to receive TENDERS from parties willing to undertake the following CONTRACT for DRAINING the said Town. For the construction and Completion of Culverts and Brick Sewers; for Excavating Lay up and Jointing Earthenware Pipes, for Constructing Sewage Tanks, Outlet Works, and Cleansing Watercourses, Fixing Gullies, and other Works. Plans, sections, specifications, and conditions of Contract may be seen at the Office of Mr WILLIAM FOSTER, Clerk to the Local Board, Bicester; or at the Office of Mr. CHARLES SELBY, Surveyor, Oxford, of whom further particulars can be had. Tenders to be sent to the Clerk to the Local Board on or before THURSDAY, the 14th day of MAY next. The Local Board do not bind themselves to accept the lowest or any Tender
WILLIAM FOSTER, Clerk to the Local Board.
Local Board Office, Bicester, 29th April, 1863

SEWERS OFFICE, GUILDHALL, 30th April, 1863.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on TUESDAY, the 19th of MAY next, at TWELVE o'clock precisely, to receive TENDERS for such WORKS of CLEANSING and REPAIRING SEWERS within the said City as may be required to be done during the term of three years, commencing at Midsummer Day next. A specification of the works and conditions may be seen at this Office, together with a schedule of prices; and the Tenders are to state the per-centage, more or less, than such scheduled prices, at which the parties Tendering are willing to execute the said works. The Commissioners will require the parties contracting to enter into bond with two approved sureties, in the sum of 1,000l. for the due performance of the contract. No Tender will be received after TWELVE o'clock on the day of treaty. The Commissioners do not pledge themselves to accept the lowest Tender, nor any, unless deemed eligible.
JOSEPH DAW, Principal Clerk.

TO BUILDERS and OTHERS.—Notice is hereby given, that PLANS and SPECIFICATIONS for BUILDING the HOUSE of MERCY, at Horbury, near Wakefield, in the West Riding of the county of York, will be lying at the Parsonage at Horbury from the 4th day of MAY to the 16th inclusive (Sunday excepted), and all persons proposing CONTRACTING for the EXECUTION of the WORKS must send in sealed TENDERS, directed to the Rev. J. SUTCLIFFE, Horbury Parsonage, Wakefield, on or before the 23rd day of MAY next. The contractor must be prepared to enter into the usual legal bond, with two good and approved sureties, for the due performance of the work, as by law required. The Committee do not bind themselves to accept the lowest or any Tender necessarily
Horbury, May 1st, 1863

TO STONE MERCHANTS and OTHERS. PARISH of ST. GILES, CAMBERWELL.—The General Purposes Committee will meet on WEDNESDAY, the 20th MAY instant, at FOUR o'clock precisely, to receive TENDERS from persons willing to CONTRACT with the Vestry for the SUPPLY and LAYING DOWN of about 800 feet of PURBECK and other KERBING as the Vestry may require.—Further information to be obtained upon application to Mr. J. C. REYNOLDS, Surveyor to the Vestry, at the Office of Works, Wells-street, Camberwell, between the hours of ELEVEN and THREE, or after MONDAY the 11th inst. The parties tendering must be in attendance when the Tenders are opened, and the Vestry do not bind themselves to accept the lowest or any Tender.
GEO WM MARSHEN, Vestry Clerk



TO BUILDERS.—TENDERS are required for the ERECTION of a HOUSE at Lower Clapton. Drawings, &c. can be seen at the Office of Mr. T. K. GREEN, Architect, 25, College-hill, Cannon-street. The lowest Tender will not necessarily be accepted. TENDERS (separate) are also required for THREE VILLAS at NORWOOD (close to the Palace); the Contractor being bound to take land for the erection of three others adjoining.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A Meeting of this Board will be held on MONDAY, the 11th day of MAY, 1863, at SIX o'clock in the evening, at the Office of the Board, No. 15, Great Alie-street, Whitechapel, to receive TENDERS for the SOLE OPTION of the several works required with the SEWERS and DRAINS of the District, mentioned and described in the specification or schedules of Contract prepared by the Surveyor to the Board, for the period of ONE YEAR. A copy of the specification and form of Tender may be obtained at the Office of the Board, upon payment of 2s. 6d. which will be returned to persons Tendering. All Tenders must be delivered at the Office of the Board previous to the time of meeting; and any Tender which is not upon the printed form prepared by the Board and duly signed by the person or persons Tendering, will be rejected. The Board do not bind themselves to accept the lowest or any Tender.
ALFRED TURNER, Clerk to the Board
15, Great Alie-street, Whitechapel, 29th April, 1863.

BOARD of WORKS, POPLAR DISTRICT.—To BUILDERS and CONTRACTORS. Notice is hereby given, that the Board will meet on TUESDAY, the 12th day of MAY next, at SIX o'clock in the evening precisely, in the Board Room, East India Dock Road, to receive TENDERS from persons willing to CONTRACT for the construction of a FOOT-BRIDGE across the North London Railway, to connect Railway and Crisp-street, Bromley. The Board do not bind themselves to accept the lowest or any Tender, and the parties tendering, or some one on their behalf, will be required to be in attendance on the day and at the hour above mentioned, and the person whose Tender shall be accepted will be required to join with the Board to supply the money at the expense of the Contractor and Board, and to furnish the names of two responsible persons willing to be bound with him in the sum of 500l. for the due performance of the Contract. Tenders (on forms prepared for that purpose (any other will be rejected), and endorsed "Tender for Foot Bridge, Bromley," are to be delivered at my Office, as above, on or before SIX o'clock on the evening of MONDAY, at noon, after which hour no Tender will be received. Plan and specification can be seen, and Form of Tender had, on application at the Surveyor's Office, 6, Furnival's-inn, until FOUR p.m. on any day until the 11th of MAY. CHARLES C. CESLY, Clerk to the Board.
Offices, East India Dock-road, April 28th, 1863

TO BUILDERS. — Persons desirous of TENDERING for the ERECTION of a RECTORY-HOUSE at High Halstow, four miles from Langport, Somerset, can see the plans and specification upon application to the Rev. ROBERT STRONG, at High Halstow, and after MONDAY, the 4th day of MAY. Tenders to be sent to the Architect, JOHN NORTON, Esq. 24, Old Bond-street, London, W. on or before the 16th of MAY. The Rector does not bind himself to accept the lowest Tender submitted.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

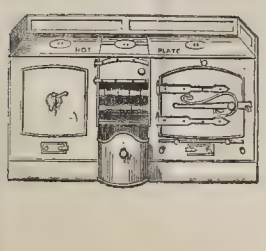
6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

SMITH'S PATENT DOOR SPRINGS FOR SWING DOORS,

So universally known as to need no description; but to prevent the substitution of spurious imitations, it is necessary to see that the

ADDRESS, PRINCES STREET, HAYMARKET



is STAMPED THEREON, such only being genuine and warranted by the Maker.

SMITH'S PATENT WEATHERTIGHT CASEMENT FASTENING

Immeasurably superior to the Espagnolette Bolt, and

SMITH'S PATENT WATER BAR,

Are the only effective means of excluding the weather from French Casements. Approved by all the leading Architects, and applied to all the principal buildings in this country, and on the Continent Models and Lists of Prices forwarded free on application. Every description of Easting, Machine, Iron-work, Repairs, &c for Builders and Ironmongers.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks Lime, and Old Bricks. Dry rubbish delivered, per barge, in any quantity alongside the Thames.

Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE
obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Finsbury Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W

GRANITE OBELISK for SALE.—The beautiful OBELISK, in polished Grey Granite, that stood in the Eastern Nave of the Exhibition Building, is now OFFERED FOR SALE.—Apply to Messrs. H. POOLE & SON, Great Smith street, Westminster. The Obelisk is erected at Lloyd's Wharf, Millbank, where it may be seen. It is suitable either for a monument or for an ornament for pleasure ground.

SLATES.—MESSRS. JONES & CO. have a STOCK of SLATES of different sorts from the best quarries in Wales; also Slabs and Cisterns; delivered at any station in quantities of not less than five tons. Price forwarded and estimates given on application.—Address,
No. 1, BOLD-TERRACE, CHESTER.

WESTMORELAND SLATES.—
A small Lot of the above TO BE SOLD, VERY CHEAP.—Apply to P. KEVAN, 11, Magdalen-street, Tooley-street, Southwark.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—This valuable FREEHOLD ESTATE (land tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, sand cart being on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 600 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the purchase the Freehold will at a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

HEATHERHURST ESTATE, FRIMLEY, SURREY.—This Freehold Estate has been divided into LOTS suitable for the ERECTION of high-class VILLA RESIDENCES, so much in demand in the neighbourhood. It is on the road from Guildford to Frimley and Sandhurst, 3 miles from the camp at Aldershott, and within 2 miles of the Farnboro' Station, and only 53 minutes by rail from London. It commands a beautiful view through a vast extent of varied and picturesque country, and is in the most healthy district in England. The soil is chiefly gravelly. For plans and particulars apply to F. GOODCHILD, Esq. Guildford; or to J. C. PAIN, Esq. Solicitor, on the estate, and at York Town, Surrey.

BUILDING LAND at OXFORD.—The difficulty which has heretofore existed of procuring suitable sites for building genteel residences in and around Oxford is now overcome. A very fine estate, known as "Northam Manor," comprising upwards of 30 acres, belonging to the President and Scholars of St. John's College, is now being laid out for the purpose and TO BE LET, on BUILDING LEASES, for a term of 99 years, at moderate groundrents. The land is situate within ten minutes' walk of the Colleges and public buildings in the city, while it possesses all the advantages of the country. The site is elevated, it has a subsoil of gravel, and a plentiful supply of pure spring water. Several lots have already been disposed of, and a few residences of a good character have been built. For particulars and to treat for the land, apply to Messrs. MORRELL, BIDDLE, & HAWKINS, Solicitors; or to Mr. WILLIAM WILKINSON, Architect, Oxford.

FREEHOLD LAND at SYDENHAM, about ten minutes' walk from the London and Brighton Railway station.—TO BE LET, on Building Lease, a Piece of LAND, having a frontage to the road leading to Beckenham of about 200 feet, and a depth of about 270 feet. Land tax redeemed. Apply to Messrs. PATERSON & LONGMAN, Solicitors, 3, Winchester-buildings, Great Winchester-street, London, E.C.

TO BE LET, on a Building Lease, at Chelsea, a PIECE of GROUND, in a first-rate situation, calculated for the erection of a public-house, for which it is peculiarly eligible being close to the New Barracks, and nine shops. About 212 feet frontage to the New Bridge-road, and about 22 feet 8 inches in Queen's-road East.—For particulars inquire on the Premises; or at No. 13a, Queen's-road East.

BUILDING LAND TO BE LET, at Canonbury (Marquess road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also at Edward's row, Bow, some cottages for completion. The usual advances of money to respectable parties.—Apply at the Offices of Mr. J. ROMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

PENZANCE, CORNWALL.—The FEE SIMPLE, in hand, of NINETEEN ACRES of first class BUILDING GROUND, all within the yards of the beach, and commanding full view of the sea, and adjoining the town of Penzance will be SOLD, in lots, by AUCTION, at Penzance on FRIDAY, JUNE 5th, 1863. The fee simple, subject to a lease now hanging on a life of eighty-one, in five Acres of Building Ground in Penzance will be sold in lots by auction at the same time. The whole of it is rented and is at present under cultivation as market-garden ground for early brocoli and early potato crops.—For particulars apply to RODD & CORNISH, Solicitors, Penzance

Penzance, April 2nd, 1863.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground. TO BE LET on lease, direct from the freeholder, for a building term if desired, conveniently-placed MANUFACTURING PREMISES, situate at West Ham Abbey, Essex, a few minutes' walk from the Stratford Bridge Station of the North Woolwich Railway, and with waterside frontage near the Channel Sea River. The ground occupies a site of about one acre, the buildings are spacious ground-floor erections, and there is a handsome and lofty brick chimney-shaft.—For particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

BUILDING LAND TO BE LET, HACKNEY, close to the Railway Station, for small Dwelling Houses.
NORWOOD, close to the Crystal Palace, for Shops and Villas. PERRY HILL, SYDENHAM, for Shops. Advances in each case if required.—Apply to Mr. T. K. GREEN, 25, College-hill, Cannon-street, E.C.

NORWOOD.—Eligible FREEHOLD LAND TO LET, on Building Leases, suitable for the erection of detached villas. Money advanced.—Address, B. FLETCHER, Architect and Surveyor, Bond court House, Walbrook, E.C.

CITY of LONDON.—BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the BEADLE, at the Hall; or to the Clerk, HENRY GROSE SMITH, Esq. 4, Warnford-court, Throgmorton-street, E.C.

MAIDA VALE.—BUILDING GROUND TO BE LET.—An Estate plotted for Twenty two Houses or to 75 if sent each. A corner, shops, four shops, and three stables. Frontages to fine wide roads. The whole to be let at the very low ground rent of 150 on repairing lease, or in portions.—Apply to Messrs. POWELL, Building Land Agents, 1, Queen's road, Bayswater-road, W.

FREEHOLD LAND WANTED, near London, suitable for building purposes. State quantity, situation, and lowest price.—Address, prepaid, to R. at Mr. Kirkman's, Auctioneer, 8, Clement's-lane, E.C., and Blackheath.

TO ARCHITECTS AND SURVEYORS.
OFFICES, in the house of a Solicitor, near the British Museum, are offered. Mutual business arrangements might be effected, particularly with a gentleman acquainted with Benefit Building or similar Societies.—Apply, C. D. or personally, 8, Caroline street, Bedford-square, W.C.

VALUABLE BUILDING PLOTS, near ORDNANCE TERRACE, CHATHAM.—The Trustees of Watt's Charity, at Rochester, are desirous of receiving TENDERS for Fourteen Plots of BUILDING LAND, at or near Ordnance-terrace, in the parish of Chatham, Kent, TO BE LET (with immediate possession) on Lease, for the term of 99 years from Christmas, 1863. The Tithe rent charge and land-tax are redeemed. The Estate is most eligibly and delightfully situated on the elevated ground between Ordnance-terrace and Fort Pitt, and commands extensive views of the River Medway, Dockyard, &c.; is adjacent to the Chatham Station of the London, Chatham, and Dover Railway, and is eminently adapted for the erection of Dwelling-houses and Villas of a superior description. TENDERS are to be sent in on or before THURSDAY, the 25th day of JUNE next, to the Office of Messrs. LEWIS & MARSH, Solicitors, Rochester, where also a Plan of the Estate and a model draft Lease may be viewed, and a copy for inspection provious and up to the day of Tender.—For further particulars of the several Plots, and conditions as to the Buildings and Leases, see further particulars and conditions which will be ready 21 days prior to the day of Tender, and may be had of Mr. MARTIN BULMER, the Trustees' Surveyor, Maidstone and Strood; of Messrs. HARRISON & LEWIS, 24, Old Jewry, London, E.C.; of Mr. WILLIAM HAYMEN (the Receiver of the Charity Estates), at the principal Hotels in Rochester and Chatham; and of Messrs. LEWIS & MARSH, Rochester.

BUILDING LAND TO BE LET, on lease situate in the best part of Norwood, within ten minutes' walk of the Crystal Palace, and immediately adjoining the Gipsy Hill Station. This eligible building ground is suitable for detached or semi-detached villas, which are in great demand. Money can be advanced to builders if required, at moderate rates of interest.—For particulars, apply personally to Mr. WILLIAM BACKHOUSE, Architect, 32, Southampton-buildings, Chancery-lane, W.C.

TO BUILDERS.—WANTED to RENT, on lease, in a good market town, and within a convenient distance of the metropolis, suitable PREMISES for carrying on a moderate and respectable building trade. No objection to take to a business, and purchase a fair proportion of stock. Unexceptional references given and required.—Address, A. B. C. Mr. Bidgen's, 49, Bishopsgate-street Within, London, E.C.

TO ARCHITECTS, BUILDERS, and OTHERS.—TO BE LET, on Building Leases, at low ground rents, about 3 acres of most eligible BUILDING LAND, immediately adjoining the Colney Hatch Station, on the Great Northern Railway. Gravelly soil and good water. There is a great demand for villa residences in this neighbourhood. The connecting of the Great Northern line with the Metropolitan Railway, brings this property within half an hour's ride of the City or West End.—Apply to Mr. S. BARKER BOOTH, Solicitor, 4, Gray's-inn-square.

GROUND RENTS.—WANTED to PURCHASE, about 120l. PER ANNUM in FREEHOLD GROUND RENTS, well secured on a good class of London house property. Full particulars and terms to be sent to Messrs. DANIEL SMITH, SON, and OAKLEY, 16, Waterloo place, Pall-mall, S.W.

EALING.—BUILDING LAND, within two minutes' walk of the Railway Station, known as Eaton Rise, TO BE LET, for detached or semi-detached villas.—Apply to Mr. HANCOCK, Surveyor and Builder, Ealing-green.

LEIGHTON, SON, & HODGE beg to intimate to Publishers, Printers, and the Public generally, that they execute in the best style and on the most moderate terms every description of WHOLESALE BOOKBINDING, either in Cloth or Leather (also Account-book Binding), with promptitude and punctuality. Their stock of ENGRAVED BRASS DIES is most extensive and varied, and designed in the best taste; and their powerful machinery and steam power give them great advantages in the rapid execution of large orders.
Applications for estimates will meet with prompt attention.
LONDON: 13, SHOE-LANE, E.C.

J. W. BIRD & CO.'S,
THE EMPORIUM,
145 & 143½, EUSTON ROAD, N.W.

A Marble Box Chimney, with 8-inch piers, as Illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price.
Masons' Work of all kinds contracted for and executed to despatch, in Town or Country.
A TURANCY FOR AN OUT-DOOR APPRENTICE.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By the patent process, which is protected, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whatever sold under the name of "Improved Zinc Paint," as the manufacturers of these qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

This day, in imperial 4to with Illustrations, Part I. price 5s. to be completed in Twelve Monthly Parts,

THE FARM HOMESTEADS of ENGLAND. A Collection of Plans of English Homesteads existing in different districts of the country, carefully selected from the most approved specimens of farm and dwelling, designed by different Architects to illustrate the several situations required under various modes of husbandry; with a digest of the leading principles recognised in the construction and arrangement of the buildings.

Edited by J. BAILEY DENTON, M. Inst. C.E. F.G.S.
Engineer to the General Land Drainage and Improvement Company.
52, Parliament street, Westminster, S.W.
CHAPMAN & HALL, Piccadilly, London.

The Builder.

VOL. XXI.—No. 1057.

The Royal Academy.

HE presence of the Prince of Wales gave additional interest to the annual dinner of the Royal Academy on the 4th instant; and the excellent and appropriate speech which his Royal Highness delivered clearly and well, touched all present. "I cannot on this occasion," said the Prince, impressively, "divest my mind of the associations connected with my beloved and lamented father. His bright example cannot fail to stimulate my efforts to tread in his footsteps; and whatever my shortcomings may be, I may at least presume to participate in the interest which he took in every institution which tended to encourage art and science in this country, but more especially in the prosperity of the Royal Academy."

When the President proposed the Health of the Visitors, he referred particularly to the position of *architecture* amongst us.

"The lovers of art," said he, "like those who are engaged in its practice, may still be supposed to contemplate a greater success than that already achieved: they, too, may be assumed to look beyond the present; to take an interest in all improvements; and, possibly, to ask themselves how their own influence can hereafter be most beneficially exercised. To such a supposed inquiry an answer may, without presumption, be suggested. If any part of the domain of fine arts can be said to be more worthy than another of their attention, it is perhaps that section which, in its various forms, is most before the world,—I mean architecture and public works. It should be borne in mind that if pictures are defective, they can be easily disposed of; that indifferent statues, and even objectionable small structures, can be removed; but spacious architectural arrangements and extensive buildings must remain, either as a lasting credit to the taste and good sense of the nation, or as a lasting stigma, which all would repudiate, but which all must be content to bear. It is unnecessary to point out examples of the latter description. It would be more useful to inquire whether the present,—that is, the customary and long-established mode of regulating such matters,—admits of improvement. Many are of opinion that, in order to insure that unity and consistency which are especially desirable in architecture, in order to avoid the incongruity which must result from successive controllers and desultory modes of proceeding, a permanent instead of a mutable directing authority is indispensable. To this suggestion constitutional objections are raised—objections which, after all, may not be insuperable. Few, indeed, would be willing to admit that the constitution of this country is incompatible with administrative arrangements calculated to promote the most important of the fine arts, the public interests, and the national honour. The truth is, art is too long to share, or be subjected to, the otherwise salutary vicissitudes of party. The changes of system consequent upon changes of administrations, to which we are accustomed in the fluctuating world of politics, need not extend to the calmer regions of art. Some of the noblest fabrics of the Middle Ages were erected amidst political storms, and as they slowly rose, looked with equal severity on the turmoils of men and the changes of the atmosphere. I will only add that I am far from agreeing with those who see nothing but defects in our own metropolis, nothing but perfection in those of the Continent. There is, indeed, abundance to admire at home; but the secret of success appears to be everywhere the same. In England, in some instances, a presiding architect; in others, private enterprise, duly controlled at the outset, have seldom failed to secure that comprehensiveness and continuity of purpose which are essential to completeness of result; and the same end is attained, only by a different process, in other States."

The Archbishop of Canterbury, in reply, touched properly the mission of art. Each of us, his Grace observed, "will regard that exquisite art which adorns these walls from his own point of view. For my own part, I cannot forget that in the early days of its revival it was the constant handmaid of religion; and that those great masterpieces, which seem to be the offspring of piety, were powerful aids to reverence and devotion. Altered circumstances did indeed, in later days, somewhat change the direction in which the current of genius used to flow. But still art has, and ever will have, a high and noble mission to fulfil. That man, I think, is little to be envied who can pass through these rooms and go forth without being in some sense a better and a happier man; if, at least, it be so, as I do believe it to be, that we feel ourselves the better and the happier when our hearts are enlarged as we sympathize with the joys and the sorrows of our fellow men, faithfully delineated on the canvas—when our spirits are refreshed by the touching representations of the playfulness, the innocence, the purity, and may I not add [pointing to Millais's picture of "My first Sermon"] the piety of childhood—when generous emotions are kindled by the spectacle of some great and noble sacrifice made at the call of duty and of conscience; or as we trace the lineaments of the great and the good [pointing to the portrait of Sir G. Cornewall Lewis], who have departed from this earthly scene, and their place knoweth them no more. May art ever employ itself in elevating the moral tone of the country, while it refines its taste; in purifying the character from base and sordid feelings, and prompting it to all that is good and generous and noble."

It was left to Lord Palmerston, however, to stir the meeting into hilarity and heartiness: "It is natural," said he, "that any man who is engaged in public life should feel the greatest interest in the promotion of the fine arts. In fact, without a great cultivation of art no nation has ever arrived at any point of eminence. We have seen great warlike exploits performed by nations in a state, I will not say of comparative barbarism, but wanting comparative civilisation: we have seen nations amassing great wealth, but yet not standing thereby high in the estimation of the rest of the world. But when great warlike achievements, great national prosperity, and high cultivation of the arts, are all combined together, the nation in which those conditions are found may pride itself on holding that eminent position among the nations of the world which I am proud to say belongs to this country." After dwelling at some length on the pleasure and varied advantages to be derived from the Exhibition, the Premier closed with a reference to the improvement effected there for the sculptors. "The present Government," said he, wittily, "has an apology to make to one department of art, and that is to the sculptors; for there is an old maxim denoting one of the high functions of art, which is *artis est celare artem*. Now, there was a cellar in which the art of the most distinguished sculptors was concealed to the utmost extent of the application of that saying. We have brought them comparatively into light; and, if the sculptors will excuse us for having departed from that sage and ancient maxim, I am sure the public will thank us for having given them an opportunity of seeing those beautiful works of men of whom it may be said,—

'——— vivos ducunt de marmore vultus.'

I trust, therefore, the sculptors will excuse us for having done not, perhaps, the best they might have wished, but, at least, for having relieved them a little from the darkness of that Cymmerian cellar in which their works were hid."

The Exhibition.

Unlike many preceding it, the present Exhibition of the Royal Academy maintains its character of superiority more by the diffused excellence amongst its constituent items than by any remarkable instances of supereminent performance. With no amazing planet to contend against, the steadier stars shine the more brilliantly; and this galaxy, being more really illuminative to those in the dark with relevance to our progress and position in art, deserves the greater attention for the highly satisfactory light it affords.

There is no great picture to assert dominion and concentrate excitement this year, and much less than might have been expected of the "sensational" order to show that that element is of such indispensable value as it needs must be considered in giving vitality to interest of any kind in our days. No such influence has been productive here of any such new and startling effects to be registered, as the spirit of the times might naturally have been supposed to evoke, unless Mr. Millais's wonderful Moonlight require patent protection, which can hardly be the case where copyright privileges are so defiantly impossible of extension; or Mr. Leighton claim some such reservation for his clever French dramatic adaptation of Biblical history, which is far less safe from imitation than his exquisite idealities, or rather dream realizations of more than earthly loveliness.

In the absence of this, to give it a distinctive recollection for future comparison, and to characterize it *per se*, it will be found to comprise an unusual number of very excellent works, and proofs of advancement corroborating the highest promise.

Of the members themselves most of them are represented in some degree; and if not in all cases adequately, they are at least very strong assistant causes of the effect; though, as is unquestionably the case, they may be under heavier obligations than usual to that class of our painters denominated "outsiders." Of course there are the usual exceptions. Mr. Maclise is a compulsory absentee, and much as he is missed, we cannot wish to see him present, as it would interfere with his mural paintings. Mr. Mulready, Mr. Dyce, and Sir Edwin Landseer are also wanting. Mr. Stanfield does not allow failing health to excuse his presence; and happily, if it interferes with the pursuit of his avocation, there is little symptom of decline in the five memorable coast scenes he now contributes. As fresh and truthful as ever, they appear to have gained in atmospheric appositeness, by a less precise touch than hitherto belonged to his method of execution. The most important of these is well calculated to show the advantage of this, and may be ranked with his greatest successes. "The Situation of his Majesty's Ship 'The Defence,' and her Prize, 'Il St. Ildefonso,' on the Morning following the Battle of Trafalgar" (123), with its long line of Spanish coast for a background, and comprehensiveness of stormy sky and sea, with the disabled ship for a leading point, is as interesting a manifestation of the mastery he has acquired over such materials as any former treatment of them could supply.

Mr. Phillip's large portrait composition undoubtedly ranks as an achievement in the class to which it belongs; but "The House of Commons, 1860," containing portraits of all the political heroes of the day,—and one of yesterday, unfortunately, — affords little opportunity for variety beyond that which the individuality of very successful likenesses can give to it; and, with all the power and richness of its rendering, it fails to have the leading attractiveness that almost any other subject of such importance from the same hand would have been certain of. The Premier has the House with him, evidently; and, governed seemingly by one impression, the

absorption has occasioned a monotonous similarity throughout the admirably-painted assembly. A pretty little incident of ordinary Spanish life has furnished him with a more congenial theme. In "Aqua Bendita" (23), a kneeling gipsy girl believes in its double consecration transferred from the hands of innocent childhood; and no more need be said of this work than that it is one of those examples that best justify his fame.

However much Mr. E. M. Ward may help in elucidating the more recondite probabilities of modern history, his name will always be associated with his "South Sea Bubble" reputation, and identified with the Hogarthian and Johnsonian period by his happy illustrations of it. With "Hogarth's Studio, 1739" (199), there is more to connect this work than a catalogue title would imply, and he has never turned to better account his aptitude for fully expressing the resources of any suggestion by the force with which he embodies it.

Reminded by Mr. Sala that "Hogarth painted a splendid portrait of Thomas Coram, who spent his fortune in cherishing deserted children, and in his old age was not ashamed to confess that he had spent his life in doing good. . . . We hope [so do we] they still teach every little boy and girl foundling to murmur a prayer for Thomas Coram;" and Mr. Ward has earned a share of the homage he so efficiently aids in securing the beneficent and persevering old captain by this appealing note of admiration. A holiday has been given to the little folk in order that they may visit the studio and see the picture; round which they throng in differently expressed admiration of its easily recognised resemblance; some with an open-mouthed bewilderment, others commenting on the most striking passages of it. One little perky damsel, who, with a deliciously natural expression of appreciation considerately gathers together her petticoats, that she may take up as little room as may be possible for so large a personage as she appears to imagine herself to be, is a charming contrast to the patient resignation of the poor cripple, so tenderly placed in a chair that she too may partake in the gratification of the inspection, and contemplate the image of one to whom she owes so many of the comforts she is conscious of. Two or three boys who would be critics if their stronger inclinations were not so distracted by the more alluring object of vision the kindly Mrs. Hogarth has become to them, from her occupation of dividing cakes and oranges, and making arrangements of entrancing promise for creature comfort that appear likely to affect a disinterested opinion (is there a latent sarcasm in this?), and a diversity of matter besides, all supply a fund of amusement to Coram and Hogarth, who, screened by the picture, are silent and unseen observers. "La Toilette des Morts" (124), represents Mr. Ward in another phase of notoriety. Charlotte Corday has more than once been invested by him with an extra amount of pathetic romance, and as circumstanced now, seated in the grim attiring cell of those destined to make a first and last appearance upon that stage on which she is so speedily to play out her short part of heroine, a rigid lifeless monument of despair, gazing with stony eyes at Hauer's scarcely finished portrait of herself as if taking leave of any recollection of her existence, Mr. Ward raises her nearly to sublimity, and at the same time, provokes a question if the German painter were really the last victim of enamoured idolization, as we are told he was.

We may not, however, continue our notice of the general exhibition this week, but must devote the remainder of our space, as in duty bound, to the

Architecture.

Forty-seven numbers in the catalogue of the Royal Academy Exhibition this year, are placed under the head "Architecture;" and one side, and a small portion of one end, of the South Room, comprise the space devoted to the drawings. The room being that which every visitor must pass through, entering or leaving the galleries, the small collection of productions essaying the representation of our art, has on the whole, a fair chance of being included by the public in the general round of inspection: thus, and helped by the speech of the president already quoted, architecture may be somewhat advanced to the appreciation by those who have the control of public works, no less than by all who erect or inhabit houses, of its importance as the art "which, in its various forms is most before the world,"—as that displayed in works "spacious" and "extensive" which "must remain either as a lasting credit to the taste and good sense of the nation, or as a lasting stigma which all would repudiate, but which all must be content to bear,"—or as one of those matters of study and pursuit which, referred to in the quotation in the catalogue, "nourish youth, delight old age, adorn prosperity, afford refuge and solace in adversity, delight at home, do not hinder us abroad,—pass the night, travel, go into the country with us." Such appreciation which it has been the duty of the *Builder* for twenty years to urge the fitness and importance of, but with too slowly coming attention from those who read, build, legislate, or govern, will perhaps become speedily the accomplished fact hoped for, now that the architect's view of his art's mission and office,—and therefore claims,—has been put forward, as in our own often repeated words, by so distinguished an authority as that which elicited a responding "Hear, hear," from the guests of the Academy. The audience then included persons with whom would lie the chief responsibility "to inquire whether the present, that is, the customary and long-established mode of regulating such matters [as those of public works] admits of improvement;" and whether it is not correct, "that, in order to ensure that unity and consistency which are especially desirable in architecture, in order to avoid the incongruity which must result from successive controllers and desultory modes of proceeding, a permanent instead of a mutable directing authority is indispensable," and that "constitutional objections" raised to the suggestion of change "may not be insuperable,"—since "few, indeed, would be willing to admit that the constitution of this country is incompatible with administrative arrangements calculated to promote the most important of the fine arts, the public interests, and the national honour." Other recognition of architecture than this for which we are thankful, remains as it has been in the Academy since its foundation; or rather the evidence which the Exhibition affords becomes, year by year, more unfavourable.

Notwithstanding it has been said, lately and before, that our art has not benefited by the influence of painters,—assertion which, regarding certain ages, we should not oppose,—we contend as we have urged at other opportunities, that a representation of architecture in the Royal Academy of Arts should be continued. If association of what are called the Arts be regarded as dissoluble on account of the fact of distinction between them,—in their office and in the expression allowed by the vehicle of each,—the home of Sculpture with Painting would be broken up, as that of our art likewise. Architecture, regarded not as science, but even as *art*, is to be distinguished with the widest interval from one or both of its so-called sisters; yet it can furnish, to Painting for example, as well as derive from it, both principles and details. Were architectural studies within the walls of the Academy better regulated, only in the matter of drawing, than they seem to be, it would be impossible to find the faulty drawing of buildings and their details, and the ignorance of perspective, which characterize a large number of the works in the several exhibitions of a season,—those, the productions of professed delineators and limners of buildings,—drawing which reduces immensely the result and value of works of some of our greatest masters of colour, and of light and shade, even in the eye of an observer who does not detect the fact of a deduction from his enjoyment, or may have nothing to say of the work before him but in its praise. In the Academy, however, there is now a competent teacher of perspective; thus it may be hoped that proper attention will be given by students, to one part of their respective pursuits which is common to painters and architects. To show that this expression of hope is hardly out of place, we may note that one evening, the occasion of a lecture by Professor Smirke, when some of the students demeaned themselves during the lecture in an ungentlemanly manner which we should be sorry to think could ever characterize more than a very small minority,—visitors passing through one of the rooms might see a drawing on the black-board, of a staircase, well executed and embodying an admirable lesson in perspective, with written beside it by some thoughtless *student*, the words "Leave this rubbish,"—the measure of *his* opinion of the value of the subject of Mr. Bowler's teaching.

Of the manner in which, year after year, the architectural drawings, whatever the number hung, are *exhibited* in the room in which space is accorded to them, we have spoken on each occasion, without result. If complaint be reasonably made by painters, of their works being placed at the level of a cornice, the case of architectural drawings much above or below "the line," is far more serious. The hanging at the Architectural Exhibition, in Conduit-street, goes beyond the limit: we should almost say that any position, off "the line," is nearly destructive to drawings of architecture, that is to seeing their details; for, upon details in buildings, much, even general effect, depends. The space given at the Academy, being for this reason of the hanging, subject to a deduction of perhaps half the number of the drawings on the walls, is from another reason and in the very principle of the so-called exhibition, no real presentation of architecture. It is an exhibition of *views* only, and generally one for each exterior or interior. Assuming them to be fair and correct, as well as taken each from a point that would or should be preferred by a person looking at the actual structure, views serve to convey a very small part of what will be looked at, of what it is the office of the structure to convey in the nature of architectural expression, and of what will be concerned in the question of merits. We have ere this endeavoured to point out to our readers, or at least remind them, that their impression of a work of architecture is derived in walking round it,—or as in the case of a work of sculpture,—rather than derived in looking at it from a fixed point, or even any small number of points. We are not discussing what may be possible in the room in Trafalgar-square; yet we must seek to understand the exact value of an exhibition of drawings, in order to know whether there might be ultimately avoided a mistake which is made in the whole system of the Academy in presence of our art, and in the particular formation of the architectural department of the exhibition, and to the end that we might even realize what there is in the way of lessons derivable from mere perspective views, and perhaps at length discover efficient means of aiding the views, or causing them to combine with something else in fairly conveying to the public, truthful information of the facts as in a building.

It is obvious that the drawings and description such as are followed by the builder in the construction, comprise the only accurate presentation of a building; and it is only from the fact that plans, elevations, and sections have to be put together, and the result arrived at by a mental process, which is difficult, that attempts to convey the meaning by a different method, a partial one, as perspective, are made. The difficulty, however, even to an architect, is such that perspective becomes of great service to him. Still, the perspective method of representation, to be complete, not only requires a number of views taken from every imaginable standing-place, but the art or science is founded on the mathematical theory that objects are seen from a fixed point, and that the eye is fixed as such point; which, untrue as to our vision of any object, even at some distance, is manifestly untrue as to the vision of the interior of a building. In that latter case, the eye must range over the widest area and in the largest angle bisected by an axis of vision; and no drawing has ever represented such a view as one down a cathedral nave, the same as was the impression, or rather sum of the successive visual impressions given to the mind. We never see drawings of their works exhibited by sculptors, in the Academy Exhibition: those artists avail themselves of the nearest approach to a *fac-simile* of the original; which fortunately, the comparatively small dimensions of works of the sculptor's art, and the use of plaster, combine to afford them. Some of the curves the most beautiful in the female form, are to be seen in the back and shoulders; what then is the value in the case of sculpture, not *relievo*, of one drawing, which would choose preferably the side including the face,—as compared with a cast? The answer should show what must be the insufficiency of mere views of buildings.

It would therefore seem to be a mistake in an exhibition of the best representations obtainable of buildings, not to include therein models. But, as of late, there are no models at the Academy. Objections have we know, been seen to the mode referred to, of representing designs. It has been supposed that models would be looked at by the public, much as were those of the several designs for the Wellington Monument exhibited in Westminster Hall, which were by many critics regarded as though models of the full size, for silversmith's work, or were regarded without any thought of scale, and inversely to their merits. But, much of the difficulty might be got over by explanation, and by figures to the proper scale; and by always carefully placing the model at the proper height, and restricting the eye of the spectator in some way to the proper level. It is a much more serious difficulty, in our opinion, that of getting

the models made, or with the mouldings and ornament delicately and exactly detailed. Scarcely one model in a hundred that we see, is really of the intended value; and we apprehend that money could not be easily found to produce habitually, even such models as some of the engineers contrive to get executed, that is, with the greater elaboration of ornament that characterizes most churches and public buildings.

We cannot, therefore, see the way to proper exhibition of architecture at the Royal Academy, without some admission, not obtrusively, but explanatorily,—of the element of plans and sections which we have succeeded in getting made a feature, though not a sufficient feature, in the exhibition in Conduit-street. In the latter case, indeed, because the exhibition addresses itself to architects, matters pertaining to convenience and construction deserve, or require, exposition and explanation. But our point is that the exposition of the *art* in a building, requires more of the nature of drawing than can be comprised in a single perspective, and generally something of the nature of plan and section. Sufficient might be given in two or three spaces, each the size of a crown-piece: it is the total omission of some of the chief requisites, and elements of effect meant to be conveyed by drawings, that we direct attention to as allowing the aim of exhibition to rest unattained, and as showing that the nature of architecture, the art, is not exactly understood and appreciated in the Academy itself. From this charge, however, we ought to except the present and former professors of architecture. Professor Cockerell devoted his lectures, rigidly as required, to the art-side of architecture: still, and rightly so, he dwelt much upon planning; and mere plans of the principal buildings of the world, were displayed amongst his chief illustrations. He also spoke energetically against the practice of getting up what were mainly to be viewed as "pretty drawings." Exposition of architectural art within the walls of the Academy, we may then conclude, needs something more than the drawings we are in the habit of seeing; or requires, at very least, enough to allow us to judge what would be the effect presented by the building, or portion of it, from changed points of view. The first step to improvement is to understand the character of the evil to be remedied.

Taking the drawings as they are, they form a small but rather choice collection. Amongst them are drawings representing some of the most important of the works, projected or in hand, for the improvement of London. Mr. Bazalgette exhibits three drawings (911, 919, and 921) showing proposed decorative features of his Thames embankment. All the three relate to the north side of the Thames. They show, besides the river-wall, parapet, and candelabra, a steamboat landing-pier to be constructed between Waterloo and Blackfriars bridges, a pier for the same purpose at Waterloo Bridge, and the landing-stairs, roads, and ornamental gardens between Hungerford and Waterloo bridges. The wall and parapet have the "sets-off," weatherings, cornice, and general mouldings, as simple lines which are broken by block-plinths bearing lions' heads in bronze, with rings, and forming the pedestals to carry the candelabra, and by larger pedestals to be mentioned shortly. The features of the parapet and wall are not in bad taste. We can scarcely say the same of the candelabra, which seem to be of the common form of dolphins, entwined and supporting a ring of gas-globes; or alternately, the form of a figure carrying the lamp in the hand. They would be neither monumental, nor according to true principles of decorative art. There are plenty of students at South Kensington, who would design better things. There were some of the works in the French division of the Exhibition of last year, that were in good taste,—because the supports were structurally as lamp-posts, and not as dolphins or lamp-carrying figures. In Paris generally, for out-of-door use, things of the kind are well done: in the new square of the Louvre, the candelabra are charming,—too costly for English reproduction, though suggestive as models. But in Mr. Bazalgette's design of the landing-piers, some of the features must be modified. The dummy or floating-pier lies in a recess formed by two bold projections of the masonry, which carry pedestals. These latter features, in the drawing of the pier between Waterloo and Blackfriars Bridges, bear sculpture in bronze, in panels of the dado, but no sculpture on the top. A pedestal is for the support of something; and as the features exactly resemble ordinary pedestals in the mouldings—though they may be intended to mark and enclose the recess,—it may be questioned whether, if the pedestals are to support no sculpture, the projections on plan should not be differently treated. A third mass of masonry carrying a pedestal, but its longer axis parallel with the parapet line, is engaged in the centre of the recess, and carries a bronze group with the god Neptune; so that the omission of sculpture in the other case, no doubt was intended. Another questionable matter is the immense bulk of these pedestals, following a common error as made in the enclosure of the British Museum, and even by Sir Charles Barry in that least satisfactory of his works, Trafalgar-square. The blank bulky mass of masonry is bad enough, where there is adequate weight and a feature upon it. Could nothing be tried to break by curves the ever-repeated rectangle of plan of pedestals? Even the perfect oval would harmonize with some groups, and afford variety. Looking at other features of Mr. Bazalgette's design, the light kiosk-formed structures on the floating piers are tasteful; indeed, we should be far from saying that these particular steam-boat landing-places would not be a great improvement on anything at present to be seen on the river. Opposite Norfolk-street and Arundel-street, considerable space would be laid out in gardens; but the absence of a plan does not allow us to see whether shrubs and horticulture would contribute as much to effect seen from the bridges, as they might be made to do in good hands. The landing-pier at Waterloo Bridge is by no means a successful design. Difficulties of the case of a roadway made to pass beneath an arch which *had been* designed as a waterway and part of a series of arches, are not simply ungrappled with; the want of harmony between bridge and embankment is greater by the presence of new architectural features than it would have been without any of these in the embankment. A great projecting pier, with pedestal carrying a group in bronze, terminating the recess for the dummy on one side of the bridge, is matched by a corresponding arrangement of pier and recess on the other side of the bridge; whilst the connecting line, the parapet of the embankment-roadway, bores through the bridge in appearance, to take up and join pedestal to pedestal. The two designs,—bridge, and landing-pier, interpenetrate, but do not harmonize; for, even symmetry, which seems to have been the aim, is attained from no point of view. The pier of the bridge should be brought into the new composition as part of it, and the feature of a great pedestal without symmetry of position or harmony with anything, should be modified, as also should the parapet where passing under the arch. In the third drawing, where this pedestal again appears, the artist has omitted the sculpture, perhaps feeling that the whole feature was too prominent. The third drawing shows the area between Waterloo and Hungerford Bridges laid out as a terrace-garden partly on the roof of premises forming a line of shops on the embankment. Across this garden is a descending way, perhaps from Salisbury-street, intersecting a circular sunk-area in which there is a fountain. Opposite this way, and projecting from the embankment, are stairs, descending right and left from a landing,—the raking parapets having reclining lions. Seated figures in bronze, on square pedestals, mark the openings in the parapet.

A finely-executed drawing (922) exhibited by Mr. J. Taylor, jun., shows "The London, Chatham, and Dover Railway Station, now in course of erection at Blackfriars," that is on the Surrey side of the river; and shows also enough of the new City bridge, and the railway-bridge, to give an idea of the design of each, and the combination. The two bridges, if we see correctly without a plan, do not exactly correspond in the position of the piers. The first opening of the railway-bridge, however, may be said to correspond with two openings of the road-bridge. The levels will be very different, the railway-level being much higher than the road-level. Thus, whatever fate may attend the view up Ludgate-hill, that of the view of St. Paul's from the road-bridge may be considered settled. In itself, the railway-bridge has a character of art-architectural which we have not seen exemplified in any previous work of the same kind of construction. The meeting-ends of the lattice girders are supported by a row of piers,—each pier formed of a cluster of shafts, resembling red granite, and with regular capitals and bases as stone,—whilst upon the outer shaft, and masking the junction of the girders and rising above them, is an ornament combining somewhat the form of a small buttress with that of an antefixa. The result altogether, shows there is no reason why railway-bridges, even girder-bridges, should not be always ornamental. The London, Chatham, and Dover Company have certainly shown desire to contribute by their stations, and some of their viaducts, to the architectural effect of London and its suburbs. The Blackfriars station (which seems to be in combination with a wharf) is built generally of yellow brick, the decorative effect being got by the introduction of red and black bricks, in addition to dressings in white stone or terra-cotta,—the reds and blacks in bands and arches being judiciously subordinated to the main tint of the walls. The openings are arch-headed, and chiefly pointed-arched. The City bridge, already illustrated in our pages, we may say, as shown in the drawing, is remarkable, as the other, for some attention to decorative qualities. The ribs are ornamented with *rosettes* cast on them, and the spandrils are filled in with lattice-work which is similarly ornamented. Whether the faces of the piers are rightly treated, with an imitation of stunted shafts of columns on a large scale, may be questioned. There is a cornice, with some amount of carving, in place of capital, to each of these columns, and a base; and each pier is terminated by the parapet of the recess of the footway, decoratively treated by perforations.

Prominent likewise on the "silent highway," is Mr. M. D. Wyatt's building now erecting for the Government of India, and to be appropriated for military stores. It is displayed in two views, one of the exterior (897), as seen from the river, and the other of the court-yard. We cannot reconcile ourselves to it. The river front is made up of a multitude of small arch-headed openings; whilst in the centre of the lower part of the front, is a great undecorated arch, opening into the yard. The contrast between these large and small features, certainly seems to us a harsh one. There is a certain amount of grouping of the small openings, a portion of them being arranged in threes, whilst others are single; and the windows of the top range have cusped tracery of Venetian Gothic character; but these matters of detail do not tell much at a distance, and the general effect is what we have described.

Small as is the number of drawings, we are not yet through them.

MONUMENTS AND MEMORIALS.

THE suggestion of raising a monument to Shakspeare, to be unveiled on the 24th of April, 1864, which is the tercentenary of his birth, finds increasing favour. Trafalgar-square has been proposed for the site.

The inauguration of the Wellington Monument at Liverpool will take place shortly. The statue has arrived, but, as it exceeds, by a ton and a half, the weight that was originally fixed for it; the scaffolding around the pillar required strengthening, and machinery of greater power had to be procured.

A monumental cross has recently been erected on the Grand Parade at Portsmouth, in honour of the officers and men of the 8th Regiment of Foot who were slain or died from disease during the Indian Mutiny. The form chosen for the monument is that of the old Irish cross. It is composed of Sicilian marble, the plinth of red Mansfield stone, serpentine and green marbles, and the sub-plinth of granite. The names of the officers and men will be engraved on the shaft. The design was by Mr. Leifchild, and the construction by Mr. Underwood, both of London.

A numerous and influential committee of noblemen and gentlemen in the North of England, including many of the distinguished members of the Chetham and Historic Societies (Lancashire and Cheshire) is now in course of formation, for the purpose of carrying out a project which has been entertained for some time past of erecting a memorial statue, in the town of Bolton, of James the seventh Earl of Derby.

The foundation stone of the Tyndale Memorial will be laid on the 29th inst., by the Hon. Col. Berkeley, M.P. The site fixed upon is Nibley-knoll, in the village of North Nibley, near Wotton-under-Edge, Tyndale's birthplace.

At Ironbridge, the widow of the Rev. J. Bartlett has given her consent that the memorial fountain commenced some time since and partially erected, should be taken down and re-erected on a more convenient and important site. It now stands in the centre of the flight of steps leading from the road to the Market-square, at the east end of the Tontine. The fountain is now completed. It consists of a plain quadrangular obelisk, whose base, plinth, and column, are of polished Aberdeen granite. It stands sixteen feet high above the platform. This is constructed of dressed Wenlock limestone and finished with York stone. The work has been completed under the superintendence of Mr. Samuel Nevitt, Ironbridge.

COMTE DE VOGÜÉ ON THE HOLY SEPULCHRE.

IN the second edition of the Rev. George Williams's "Holy City" will be found a long chapter, by Professor Willis, entirely devoted to the architectural history of the Holy Sepulchre. It is almost needless to say, when the latter gentleman takes up a subject, that hard things become easy; for no one in our days has ever read more sermons in stones than he has. In the present instance not only have a vast number of old authors been brought forward as witnesses, but assistance for the architectural restoration of the church of the Crusaders has even been obtained from the inlaid wooden models made by the Jerusalem monks and sold to travellers in the last century. The professor concludes his clever and interesting notice with the following words:—

"An accurate research into the existing building by an architectural student well versed in Mediæval structures, would, I am confident, detect sufficient remains of the church before the fire in 1808, represented in my sections, to form a much more complete and more exact one; and I trust my attempt will induce some traveller to set about correcting my mistakes, and resolving the difficulties which I can only pretend to have pointed out, happy if in so doing I shall have succeeded in exciting the interest which always attaches to an object of research once indicated."

This is exactly what has been done by M. de Vogüé in his work on the "Churches of the Holy Land."* After the excellent summary lately given of it by Mr. Wigley at the Architectural Museum (which still, alas! remains in confusion at Brompton), it would be useless to do over again what has been done by so very competent an authority, and who, moreover, has had the immense advantage of seeing all the localities.† But the "History of the Church of the Holy Sepulchre," as published by Professor Willis and re-edited by M. de Vogüé, is so useful and so instructive an architectural study, that it would surely be no loss of time to give a short summary of it from the "Eglises de la Terre Sainte." It must, however, be carefully kept in mind that the basis of the whole story belongs to our countryman; and no one has been more forward to acknowledge this than the gentleman who candidly confesses his obligations by telling us that "this memoir, full of talent and erudition, has continually served me as a guide in my own researches; and if my interpretation of some passages differs from his, I ought to say that, after all, he was the first to indicate the true way, and that I have been obliged to borrow for my own work the complete scheme of his memoir.

The history of the Church of the Holy Sepulchre divides itself into four periods. The first comprises the time between the foundation of the basilica, by Constantine, in 326, and its destruction by the Persians under Chosroes in 614. The second extends from the restoration, by Modestus, to the second destruction by the order of the Caliph El Hakim, in 1010. The third, from the reconstruction, in 1048, until 1130, when the Crusaders built a large church, covering the whole of the sites. The fourth epoch terminates in 1808, when the church was so much injured by fire, that an incompetent Greek architect could find no other means of safety than by entirely covering the old building by an exceedingly thick new casing; so that in the present day we do indeed possess the church of the Crusaders, but cannot see it. I now propose to follow M. de Vogüé through his account of each of these epochs. At the same time it should always be kept in mind how very large a share of the work belongs to Professor Willis.

FIG. 1.

FIRST PERIOD.—326 to 614.

The Basilica of Constantine.—In order to understand the works undertaken by order of this emperor, it will be as well to begin by a short description of the locality of the Crucifixion and the sepulchre of Our Saviour as they existed previously to the fourth century. At the present time, when we see the Christian quarter of the town occupying so much space immediately around the holy sepulchre, it is rather difficult to imagine that this spot was formerly situate without the walls of the ancient city; but such must have been the case, and moreover, portions of the wall which excluded these localities from the town have recently been brought to light.

At a short distance from this wall there was a small ravine, marked A on the plan (fig. 1), which level is now that of the paving of the modern church. On either side of this ravine the rocks rose abruptly to the height of from 12 to 15 feet. On the rock to the east was the place of the Crucifixion (marked G), and below it (H) a little excavation, known in later times as the tomb of Adam. The opposite rock, at the west end, was pierced with two tombs, each of which had a vestibule. The larger excavation (C) is generally known as the tomb of St. Joseph of Arimathea; and probably because all the niches were occupied, he caused a second tomb (B) to be excavated at a little distance. This latter consisted of the usual vestibule and an inner chamber, on the north side of which was a recess for a body, covered with a semicircular niche; the entrance into the inner chamber from the outer was by means of a very narrow and low doorway, which was closed by a large stone. It was in this inner chamber, and in this recess, that the body of Our Lord was placed by the care of his disciple St. Joseph of Arimathea, who subsequently, contrary to the usages of the Jews, caused a tomb for himself to be excavated in the floor of his family sepulchre.

When the Emperor Hadrian tried to establish a pagan Jerusalem, hating alike the Jews and the Christians, he dedicated a temple to Jupiter on the site of the Temple, while he caused the ravine A to be filled up with earth, and upon the ground thus levelled a temple was erected to Venus. When, however, Christianity triumphed under Constantine, this temple was removed, and the ground restored to its natural level by the removal of the accumulated earth, and the construction of a great basilica to inclose all the holy sites was commenced. Eusebius has preserved us a letter from Constantine to the Bishop Macarius, the most interesting portion being that in which he wishes to know whether the ceiling of the basilica should be decorated with caissons or some other ornament, and suggesting that if the former be preferred, they should be gilt. Eusebius, in his "Life of Constantine," gives us a description of the basilica itself, but unfortunately not a very clear one. From it we learn the following particulars:—1. The sacred cave was ornamented with choice columns and decorations. 2. There was an extensive space open to the sky, paved with polished stones, and surrounded on three sides with long cloisters. 3. On that side of the court placed opposite to the cave was the basilica, the interior of which was lined with marbles and the roof covered with lead, while the gilded ceiling caused "the entire building to shine as if with the rays of light." 4. There were double aisles on either side, and three doors at the east end. 5. Opposite to the doors was the apse, surrounded with twelve columns, having silver capitals. "Hence, going forward to the entrances which were before the temple, he interposed an open space, viz., between the basilica and the portals; there were also recessed chambers (*exedræ*) on each side the first or entrance court, which had cloisters attached to it; and, lastly, the gates of the court. Beyond them, in the very middle of the wide market-place, stood the propylæa or vestibules of the whole work, which, being decorated in the most imposing manner, afforded to those who were passing a promise of the wonders within."* From this description and from sundry fragments still remaining, and which he thinks belong to the edifice of Constantine, M. de Vogüé constructs the plan shown in the accompanying cut, in which it is only fair to state that he differs very considerably from Professor Willis. One of his discoveries, indeed, the pillar at O, fig. 2, is very summarily dealt with by Mr. Fergusson, in his pamphlet, who asserts that so far from being a relic of the time of Constantine, it must be referred to that of the Crusaders.

The first operation of the workmen employed by the emperor was to level so much of the surface of the rock as was required for the new church, leaving, however, the rock of Calvary standing up on the eastern side, and the Holy Sepulchre on the western. In the latter instance the vestibule was destroyed, and the outside of the sepulchre fashioned into a polygonal form, and decorated with a marble placage and attached columns. Professor Willis, however, thinks that the columns were disposed as a peristyle, while the rock formed the cella; in fact, the same sort of arrangement as we see in the temples of Vesta. It was also found necessary to remove the whole of the vestibule, and the greater part of the tomb of St. Joseph of Arimathea: that part, however, which was outside the apse has remained to the present day. M. de Vogüé considers that we have still three distinct portions of the basilica remaining:—1, the foundations of the apse with its little chapels, which have determined the shape of this portion of the church ever since; 2, the angle impost and springings of arches at O, which Mr. Fergusson attributes to the Middle Ages; and 3, the remains of a portico at *p*, which were first discovered by Doctor Schultz. From these two latter remains M. de Vogüé has been enabled to reconstruct the propylæa, *p p r r*, and the atrium, *r r m m*. In the interior we have the apse with its little chapels, *a b c*, and an arcade of twelve columns: the position of which corresponds with that of the arcade of the present church; indeed, several of the bases of the latter are said to form part of the living rock. In the centre of the space enclosed by these columns was the holy sepulchre B, which, according to Antony of Piacenza, was formed of the same stone as a millstone, while the roof was of silver, and a great quantity of valuable offerings were suspended by iron rods: this description probably refers to the inside. At *d* was the stone which formerly served to close the sepulchre, and which was rolled away by the angel. This was divided into two parts, one of which, covered with gold and gems, remained *in situ* at *d*: the other served as an altar, where Our Lord was crucified. Proceeding eastward, we find transepts (as at Bethlehem and Paul's without the walls at Rome), in the centre of which was the altar. The nave had double aisles, the row of pillars nearest the nave being

* "Les Eglises de la Terre Sainte." Par le Comte Melchior de Vogüé. Paris: Didion. 1860.

† See *Builder*, p. 256, *ante*.

* Professor Willis's translation of the passages has been used. See Williams's "Holy City," vol ii. p. 245.

circular columns, while those between the aisles were square piers. Above was a triforium and clerestory supporting the gilt coffered ceiling. In the outermost southern aisle rose up the rock of Golgotha, not so high, however, but that it left something like 9 or 12 feet clear between its top and the ceiling of the aisle. This upper surface

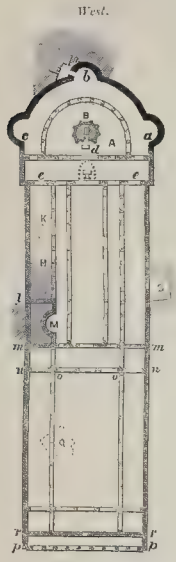

FIG. 2.—*East.*

was occupied as far as *l* by a chapel, and the rest of the space from *l* to *m* being closed up with walls to hide the irregularity of the site. The excavation M, if ancient, was dedicated to some Christian tradition, such as the division of the garments. At H, under the hole for the cross, there was a small natural hollow, which was enlarged and afterwards formed the apse of the chapel of Adam. We still see the crack caused by the rending of the rock mentioned in Scripture. According to tradition, Adam was buried in this hollow, and the blood of Our Lord running through this crack flowed upon the skull of the first man and washed away his sin. This is the origin of the skull we see at the feet of most of the crucifixes. In the Middle Ages, Adam is frequently represented as being brought to life by the blood of Our Lord,* a far more poetical way of rendering the tradition than the usual skull. K was the stone upon which the body of our Lord was placed before it was deposited in the sepulchre. S was a cistern called the prison, from a tradition that Our Lord was placed therein while preparations were being made for the crucifixion; and Q another cistern where St. Helena found the crosses.

SECOND PERIOD.—614 to 1010.

The Churches of Modestus.—When Chosroes took Jerusalem, in 614, his army was followed by thousands of Jews, who are said to have been most active in the work of destruction: the consequence was that the magnificent structure of Constantine was totally destroyed, and when Modestus, afterwards patriarch of Jerusalem, with the help of St. John the Almoner, had completed the work of restoration after fifteen years of labour, the result, instead of a large basilica, with its atrium, &c., was simply a number of small churches each covering some venerated spot. The reasons for this change were twofold: in the first place, the funds were limited; and, in the second, the Byzantine domed church had supplanted the basilica. We therefore find four distinct edifices: 1, the Church of the Resurrection, built over the Holy Sepulchre (see A, fig. 3); 2, the Church of Golgotha, H; 3, the Church of the Invention of the Cross, F; and 4, the Church of the Virgin, K, built over the unction stone. These four churches were connected together with walls, and the court in the middle was paved with marble. The principal authority for the restoration of the churches of the second period is the well-known description of Arculphus, as taken down by Adamnanus, abbot of Columba, in Iona, who furthermore induced him to draw a plan upon a waxen tablet. Two editions of this plan have come down to us, one of them being published for the first time in the present work.

The Church of the Resurrection.—Modestus found the apse of Constantine's basilica still standing, or at least sufficient of it to serve as a foundation for the new work. The eastern wall of the transept, *e é*, was also probably in the same condition, while the bases of the colonnade being cut out of the rock would be equally available. The colonnade was therefore carried on until it met the walls of the transept, from which latter sprang three apses. The walls of the apse were continued from *a* and *c* to *e* and *é*, and pierced with five doors on each side. Outside the eastern apses was a semicircular portico. We have thus by the extension of the apse built by Constantine the first circular church of the Holy Sepulchre. The rock itself was covered with engaged columns and marble, while two columns at the east end were connected to the others by means of low walls; within was, *d*,

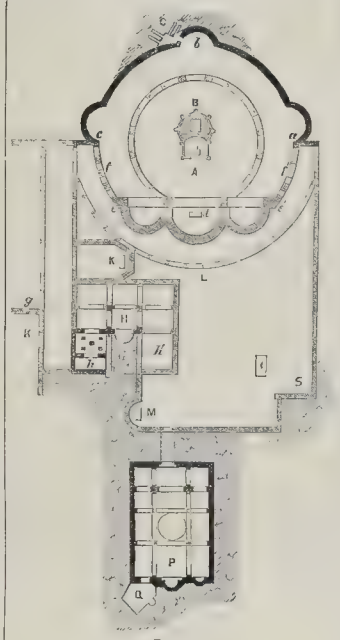

FIG. 3.

one part of the stone of the angel, used as an altar; the other half served as the high altar in the principal eastern apse. It should be remarked that the space over the Holy Sepulchre was open to the air in all the constructions which succeeded one another.

The Church of Golgotha appears from Arculphus to have been larger than it is at the present day. M. de Vogüé has therefore added a bay to the west and an aisle to the north, *h'*; he also supposes that there was a cupola at H.

The Church of the Invention of the Cross, known throughout the Middle Ages as the Basilica of Constantine, was also a construction which owes its origin to Modestus, although the Crusaders rebuilt the vaults. It is a church (for it has undergone very little alteration in the plan and lower parts) precisely like so many that are found in Greece and Syria, consisting of three apses, a centre dome, and a western narthex. Beyond it, at Q, is situate the cistern where St. Helena found the three crosses. At present the floor of the chapel is some 16 feet below the floor of the church above, and it is rather puzzling to conceive why Modestus built it at this level. The cistern, Q, is some 9 or 10 feet lower.

The Church of the Virgin, in the eleventh century, contained the unction stone, and M. de Vogüé has therefore placed it at K. At M is the *exedra* noticed in the previous plan, and in Arculphus's time, the repository of the chalice used by our Lord on Good Friday. At I was a table for alms, said to indicate the spot where Abraham placed the wood when about to sacrifice Isaac. At S was the spot called the prisons; and at L a place where sundry chains attached to the neighbouring churches met together, and which was supposed to indicate the centre of the earth. Finally, Arculphus shows sundry lines to the south of the Chapel of the Virgin which M. de Vogüé identifies with the ruins of a portico still remaining.*

THE SPREAD OF SMALL-POX AND FEVER IN THE METROPOLIS.

IT is with very great concern and regret that we have noticed the increase of the first-named pestilence. In Islington, among the houses which stand between the Caledonian-road and the York-road (formerly Maiden-lane), the cases seem to be increasing in number; and so serious is the result, that it calls for some active measures for preventing further mischief. It is not children only who are attacked, but men and women in the strength and prime of life, and even persons advanced in age. Small-pox, as we have before noted, is also raging in other parts of the metropolis; and, amongst other districts, we now learn that cases have occurred at Battersea, where typhus fever has also been prevalent.

A few years since the late Prince Consort directed special attention to the increase of small-pox in the large towns of England; and since then several persons of well-known ability have pointed out the danger which was likely to ensue in consequence of the neglect of vaccination—not only amongst the poor and ignorant classes, but also with many who are well informed and in better positions; and now the time seems to have come when the public of London must suffer the consequences of such neglect. The metropolitan Hospital appointed for the reception of cases of small-pox is full, and applications are constantly being made at other hospitals and at the infirmaries of the workhouses for admission.

As regards the Islington district, which, according to the medical officer of health's report, has been excessively unhealthy of late, we have made careful inquiry and received fresh proof of the ill-effects of bad sanitary arrangements in connexion with both small-pox and whooping-cough. At the back of Bemerton-street, on part of the ground on which the Sunday Fair, some time since described in the *Builder*, used to be held, there still stand a number of miserable and unwholesome cottages. The rooms are very small, ill-ventilated, and for the most part dirty. These are only one story high; and, being planted in the old-fashioned way upon the earth without provision for drainage, the walls are rotting with damp; and what adds to the evil is, that many of the houses are over-crowded by poor distressed families. We are told that the small-pox has visited nearly every one of these houses: nor will any one wonder at this who has seen the condition of the places. In one of the cottages a case of small-pox first occurred; and it then seems to have spread thence through the others to Stroud's-vale, Bemerton-street, and the adjoining neighbourhood. In the course of a tedious inquiry, we found that vaccination had here been greatly neglected;—that in several instances those who had been vaccinated in childhood had been attacked by this disease; but, in almost every instance, the cases were slight in comparison with those in which vaccination had not been attended to. Since there can be no doubt, as every one knows, of the infectious nature of the small-pox, particularly in such over-crowded dwellings as those to which we have so often referred, it is a most important duty in all who have the charge of the health of parishes and districts, to provide means for the immediate removal of afflicted patients, and suitable places for their reception. At present, when the hospital is full, the parish authorities are bound, if required, to remove those sick in this way to the infirmaries of the workhouses; and as, in most instances, there is no distinct provision in such infirmaries for those who are ill of fevers and smallpox, this is attended with considerable danger; and it has been recommended by the Metropolitan Association of Medical Officers of Health, that, in consequence of the increase of mortality from small-pox, the guardians of the poor and other local authorities should take the matter into consideration. The Association, while recognising the total neglect or inefficient performance of vaccination as the great cause of the mortality in question, consider it not the less apparent that the prolonged residence of

* To be continued.

infected persons in rooms occupied by others, the exposure of such persons in the streets, in public conveyances, in the waiting-rooms of hospitals, and the absence of adequate means of isolation, have been the immediate agents in bringing about the recent rapid diffusion of small-pox to a degree unexampled in the epidemic of 1859-60; and that, in consequence of the want of room at the Small-pox Hospital, it is necessary, during the epidemic, to provide temporary buildings, in such situations as are best suited for the purpose, on the double ground of distance from inhabited houses, and facility of approach; also that public attention should be called to the importance of vaccination, and the nature of the law in connexion with it.

Although we know that there is a prejudice against vaccination, we believe that this is based on such slender grounds that, if the Act of Parliament were properly enforced, in nine cases out of ten the parents would conform with what is necessary for the safety of their children. There is great carelessness, rather than positive prejudice, respecting vaccination amongst many parents; and good would be done it those who have the care of this duty were to make inquiry at the national and other schools for cases of neglect in this respect; but far more good would follow a house-to-house, or even a room-to-room visitation, in the poorer districts, particularly those in which the small-pox is now prevalent.

We have still, as we have ever had, no doubt that typhus fever, small-pox, and some other complaints of the same class, are preventible: we see that the worst and most numerous cases occur in places which are neglected in sanitary arrangements: we find that in these situations diseases of this description spread, if care be not taken for the timely removal of patients. In the wretched homes existing, the death-rate of those who are stricken with disease is enormous: even in the Islington Fever Hospital the number of deaths is large; but it must be considered that, for the most part, the worst cases only are brought here. Large as the number of deaths is in a spacious place such as this, where care is taken of ventilation, and where there is the best medical attendance, there can be no doubt that if the same patients had been allowed to remain in their homes, the number of deaths would have been doubled.

In the Fever Hospital there are written, in a large volume, the names of those who are brought to the hospital, and an account of the neighbourhood in which they had been living; and these entries, we find, agree in a very remarkable way with the state of the drainage and other sanitary conditions of districts. There are many cases in the suburban neighbourhoods, in Deptford especially. Here, in New-street, Griffin-street, and Mill-lane, not only in ordinary dwellings, but in licensed lodging-houses, typhus fever has been raging. This is a matter which requires not only the attention of the district officer of health, but also of the police authorities. It is notable, however, that the licensed lodging-houses in St. Giles's, and those in the City and several other parts, seem to have been free from virulent fevers.

Bethnal-green, St. George's-in-the-East, Dock-head, Bermondsey, parts of St. Martin's-in-the-Fields, Little Saffron-hill; Perry-terrace, St. Pancras (a place which we have before noticed); Redcliff-square, Stepney; Charles-street, Mary-lebone, &c., &c., yield many cases of typhus fever. We will by-and-by give some account of these fever dens; particularly those in Deptford; but, in the mean time, we may remark that those who have the care of the health of parishioners ought to be watchful, in neighbourhoods where fever and small-pox are prevalent, to see what drainage or other sanitary improvement is required; and to endeavour, by all means, to remove those who have been seized with these disorders. In the report for 1861 of the Fever Hospital, it is said—"Much has been done. The victims of typhus, since we have had boards of health, with their medical officers and their inspectors, studying each court and alley, are reduced in numbers. It is now five years since we had a serious and open epidemic." Such fluctuations there have always been; but the filthy pool of fever, if it has not always overflowed, is still among us, ready to overflow again; *and it has no right and no unavoidable occasion to be amongst us at all.* All typhus and typhoid fever is preventible. There is much to be done before it be exterminated throughout London; but that we have made some head against the monster is precisely the reason why we should not relax in the war we are bound to wage against it.

FOOT'S CRAY CHURCH, KENT.

THE "CRAYS."

As you travel on the London, Chatham, and Dover line, you may see on leaving Bromley the parish church of Foot's Cray, which has been partially restored under the direction of Mr. E. C. Hakewill. This was recently reopened with special services. The old pews have given way to open seats, and all galleries have been removed. A new open roof has been placed on the nave, and the nave itself elongated westward, leaving the old wooden bell-turret and spire in their original position. Three new bells, by Messrs. Warner, have been hung, and are rung from the floor of the church. An organ-chamber, too, has been thrown out on the north side of the chancel, and a new organ is being built by the Messrs. South, of Gray's-Inn-lane. Part of the staircase to the old rood-loft remains, the openings to which have been restored, and form the access to a new stone pulpit. A remaining panel of the rood-screen has been introduced into the front of the prayer-desk. A brass lectern, by Hart, is the gift of former parishioners of the rector at Bibury, Gloucestershire.

Three new painted windows have been added by Castell. The ancient Purbeck marble font, which had lost its columns and gained a painted surface of "granite," has been restored and polished by White, of London, at the cost of the architect. Mr. Francis, of Foot's Cray, did the works; and the cost has already exceeded 850*l.*; but much remains to be done in the removal of external stucco and brickwork of former days, and in coloured decoration of the interior. All this will doubtless follow. The rector, the Rev. C. Birch, deserves credit for his efforts.

Passing the other day along the railway mentioned, the country hereabout showed how marvellously the season is in advance; appletrees in full bloom, the pear blossom falling, and all nature flush with green. There is an interesting set of villages here to which the little river Cray gives name,—Crayford, Foot's Cray, North Cray, St. Paul's Cray, and St. Mary Cray. Foot's Cray gets the rest of its title from its Saxon owner, Godwin Fot, or Foot. The churches have interest enough for a day's loiter; and there are others close by. The visitor may go with Robert Bloomfield:—

> "O'er eastward uplands, gay or rude,
> Along to *Erith's* ivied spire,
> I start, with strength and hope renew'd,
> And cherish life's rekindling fire."

Then to Dartford; Darent, with its Norman church; and Swanscombe, with its Saxon one, both remarkable. Near Dartford, to go back a bit, may be seen some of the curious pits in the chalk called "Dane holes," similar to those at Little Thurrock, on the other side of the Thames, described in one of our earlier volumes. In fact, a refreshing and satisfying day may be spent hereabout without any great expenditure of money or strength.

THE MARKET VALUE OF AN ARCHITECT.*

In these revolutionary days,—when the great purpose of a man's life seems to be, if not always to leave the world better than he found it, certainly to leave it upside down,—whilst the map of the earth is changing, the map of history changing, the map of society changing, the map of science changing, day by day, we cannot be surprised to see changing with the rest the not unimportant map of that division of labour by which human energy conducts its material and intellectual operations. Old agencies become effete: new take their places. Vocations which were important yesterday are superfluous to-day. Our old men, like our old muskets, are behind the age.

Now, amongst other honourable callings in art and science which have existed time out of mind, one of the most ancient,—in fact, we can follow its history by infallible records for 3,000 years,—is the vocation of an *architect*. And this vocation, I may fairly affirm, has all through these thirty centuries received from public opinion respectful recognition,—at least, in the great centres of intelligence for the time being. But within the last few years, in this metropolis of London, it really seems as if the proposition were being advanced that this recognition is a mistake,—that this architect, in a word, is a myth.

There are some who have put the matter in the form of a puzzle, desiring to know whether any one can inform them what an architect is. No one can, of course. Gentlemen of learning in that way, who consider themselves behind the scenes, applaud the cleverness of the hit. They have heard of the name, it is true. They have a vague idea of large pretensions attached to the name. They have heard a good deal lately of one Sir Charles Barry, an architect. With regard to St. Paul's Cathedral, also, in the City, they have heard of one Sir Christopher Wren, an architect, whose fame is supposed to be an honour to his country. They have travelled all over the world, one or another of them, and have looked at all the lions of the world. A very large proportion of these lions are certainly architectural lions; objects of much pride to the people; subjects of books, pictures, medals, histories, poems, researches innumerable; mighty and venerable works of marvellous human skill; by the Nile for instance, by the Ilissus, by the Tiber; by a hundred such old rivers to whose silent flow these works of the architect seem to give a voice, recalling the memories of ages otherwise lost. No doubt, all this is so; but yet, when the question is put in its plain, prosaic simplicity,—What is an architect?—gentlemen of education really cannot readily tell. There are even gentlemen in the House of Commons who have suggested the answer in a vague and pleasant way, that an architect is a nuisance; reminding one of the time when a similar puzzle was proposed,—What is a pound? There was the same quandary then. Some gentlemen had vague ideas about twenty shillings, but further than that the puzzle has never been unravelled to this day.

Let us take another instance. There exists a certain artistic society, of well-known name, professing to exercise great influence in architecture; indeed, dealing with church architecture largely, and that not only religiously, but technically and practically too. Its criticism is furnished by gentlemen of whom probably not three could make a passable drawing of the back leg of a chair. And yet before these empirics prominent architects humbly present their designs for judgment, thankfully accept faint praise, submissively endure dogmatical, almost discourteous rebuke.

Once more, when the Great Exhibition building of last year had to be planned, the Royal Commissioners, peremptorily rejecting the suggestion of having an architect, employed a sapper and miner. The Crystal Palace of 1851, none the less, was the work of a gentleman's gardener.

Now "the value of a thing is what it will bring." What, then, is the value of an architect? Not much, one might feel inclined to say; in point of fact, at the present day, nothing apparently;—nothing, at least, but romance,—nothing worth paying for in the eyes of Parliamentary critics, royal commissions, ecclesiological societies; and, so far as these dignified authorities are exponents of general opinion, nothing worth paying for in the eyes of the sovereign public. But hold: if it comes to a question of what is worth paying for,—a question of market value, whether of broadcloth or brains,—the public of this country are given to judging by their own instincts, altogether independently of dignified authorities. Walk through the city of London, therefore,—through Liverpool, Manchester, Glasgow, and many another busy hive of industry,—and take the effectual suffrage of the every-day works of every-day streets,—the property of men with whom market value is everything, and romance nothing. Do these employ sappers and miners and gentlemen's gardeners? If the House of Commons find it so hard to tell the market value of an architect, suppose they consult some shopkeeper in Cheapside? Perhaps he may be able to solve their other puzzle too, and tell them what is is a pound.

The value of a thing is what it will bring. I propose to embrace this proposition, as you see, in its hardest and most prosaic sense;—what is the *market value* of our profession? I propose to answer the question in the hardest and most prosaic manner,—by weighing the practitioner against *cash*. Rely upon it, John Bull's purse is not opened as it is to us to those who do him no service.

It is possible to ask,—and it would only depend upon a peculiar kind of moral courage how long one might persist in affecting not to know,—what is a *lawyer?* There is a certain grim pleasantry, however, which goes for an answer: it is perfectly intelligible: he who is his own lawyer has a fool for his client. Even affectation must ultimately yield to the strength of this simple reasoning, if the querist has had any experience of business at all. Now he who is his own architect,—what sort of person has *he* for his client? Perhaps statistics

* By Professor Kerr. Read at the Architectural Exhibition on the 5th instant.

might furnish an answer here no less conclusive than the former.

What is a *soldier*, by the bye, in these days of Garibaldini and Polish scythemen? What might be the answer of the wits of Westminster and South Kensington, I cannot presume to say; but a plain man of business might venture to suggest that he is still an expert, trained to do with every advantage that which your Garabaldini and scythemen, for want of training, can only accomplish under much disadvantage. And in these days of capitalist builders, ecclesiological amateurs, sappers and miners, and gentlemen's gardeners, what, in like manner, is an architect? A trained expert none the less, who by reason of his training, and in exact degree according to the measure of his training, performs with facility and honour a difficult and delicate intellectual task which these Garibaldini and scythemen of the arts, for want of training, only bring dishonour on their age by pretending to attempt; dishonour even in the eyes of those who put them forward—whose want of knowledge is on a par with their own want of skill,—for, after all, who amongst the very men who cannot tell what is an architect will have the hardihood to suggest the creation of one worthy the name out of a sapper and miner or a gentleman's gardener?

I do not forget that in former lectures in this very place I have traced the history of two of the most remarkable architects of all time, with whom architecture was not apparently the subject of youthful study. Michelangelo was a sculptor. Wren was a mechanician. It is true. Therefore, the argument has run, why not make another Wren out of "a clever young officer of engineers?" another Buonarotti out of a distinguished horticulturist? Well, little Sir Christopher was a gentleman, and member for Windsor; we can fancy him speaking very civilly to the sapper and miner; but, in the name of all rugged memories! what would *he* say to the gentleman's gardener who struck at the Pope with a scaffold board? Again, the argument runs on, in the Middle Ages the architects of marvellous works were untrained priests; why not therefore out of a clergyman at large make a useful jurisconsult of the Ecclesiological Society? The inference here, I reply, is even more hollow than the former. Were the priest architects of the Middle Ages untrained? Certainly not: the clerical experts of that time, in all departments alike, were doubtless not only carefully taught, but carefully selected both before and after. Nor was Wren untrained; after the manner of his time it is unquestionable that he had studied anxiously for years. As for the magnificent intellect of Michelangelo, if there be anything that we can suppose impossible with it for lack of training, it would be architectural design; and more, if there be anything in which even training proved inadequate to constitute him so much a wonder of the world as in all else, critics agree that it is in this art alone that he is scarce himself.

An architect, then, is a public practitioner who, by means of a certain training which is peculiar to him (based, of course, upon a certain aptitude which is not every one's gift), is qualified to administer building operations with peculiar skill. And the value of such a public servant is to be judged of by two facts at the outset which are to be taken for granted. First, it is the fact that within the last fifty years the numbers of the profession, at first in London and the great towns, but latterly throughout the country at large, have been steadily increasing; and this in an advancing ratio, which at the present moment is almost incredible. This is proof which statisticians would pronounce indisputable that the English public, appreciating very highly the character of the supply, are thus induced in a corresponding degree to augment the demand. Secondly, it is the fact that while the profession of architects has been so vastly increasing in numbers, the position of its members socially, educationally, and pecuniarily, has not only continued satisfactory, but has materially advanced. This is good evidence, again, that on the whole the public pay the architect well: there is even reason to believe that the public at this moment are perfectly prepared to pay him better. We are, therefore, already entitled to affirm that the market value of the architect is a matter upon which there need be no feeling of discouragement: if we have detractors, they are certainly not the English public at large.

In proceeding, now, to examine more in detail the functions of the architect as a public servant, I need scarcely remark that in every-day practice he frequently diverges into business which is not strictly architectural; it being always the rule that, as every vocation is conterminous with, or, as we say, abuts upon, a variety of other vocations which may be said to surround it, there are in every direction recognized combinations of vocation effected upon border ground. And thus there constantly come before certain classes of architects a mass of questions of survey, valuation, purchase and sale, legal and other controversies of many kinds, in which, as adviser, negotiator, skilled witness, advocate, or arbitrator, the experienced architect is able to render to the public such service as no one else could pretend to offer. But suppose we set aside all this as surveyor's work. That it is most useful work we must never forget; and the fact that it is handsomely paid for is no doubt in many cases an important element in the pecuniary success of the profession; but, nevertheless, we need not shrink from surrendering this ground in our present inquiry, so as to confine our attention to what may be called the more peculiar and exclusive province of the traditional architect. In other words, divest the question of all this useful, profitable, but not purely architectural skill, and there remain these three great departments of our craft pure and simple, each one essential to the character of a perfect architect, and each one bearing a market value; namely,—

Building contrivance, or the contrivance of plan;
Building science, or the science of construction;
Building art, or the Fine-art Architecture.

The master architect is master of all these, and he *alone* is master of them all. I will go even further, and assert that he alone is master of *any* of them, as mastery should be.

The raw material for all this exercise of intellectual endeavour is the builder. He supplies the bricks and mortar, the timber and deals, the journeyman and the labourer, the trowel and the hammer. Occasionally he is bold enough to profess to supply the architecture too: he is a practical man, and an ounce of practice is worth a pound of theory: he has had great experience, from the bench upwards, and could take off his coat and turn to at his trade yet if occasion required: he keeps his own draughtsmen, perhaps, and can turn out a drawing as well as any architect in London; and so on. This gentleman is the raw material. Give him an architect, and he owns it frankly:—"I always prefer to work under an architect, if it is only a five-pound job; because then I know it is *right;* I have no trouble and no responsibility. The only thing that puzzles me," he will say confidentially to the architect, "is this; how, in the name of wonder you can do so much work for so little pay: what's five per cent.?" He *may* go on to hint that the five ought to be made up to ten; but the market value of an architect already depends upon the stolidity with which he listens to this suggestion without having the faintest idea of what it means.

Look now at what I call building contrivance. I mean the skilful adjustment of everything to the end of convenience in respect of the arrangements of plan, the choice of appliances, and the ordinary construction. We may safely say that if the architect be not able to profit his client in this matter alone to the full extent of his commission he is not worthy of the name. I might even assert that, as a rule, the difference of palpable value between, for instance, a West-end dwelling-house carefully compacted by an experienced architect, and the equivalent pitchforked together by any one of a hundred builders who would cheerfully dispense with all professional aid, is, in respect of mere contrivance, not simply five per cent., but five times five, and without the necessity for a single shilling of additional outlay on this account.

But, in order that the architect may really be of service to the public in this important respect, it is obviously essential that he should study with attention the subject of plan. Nothing can be a more fatal error as regards the value of the architect than a notion which pervades the mind of many of our students to the effect that artistic design is the one thing needful. Let it be distinctly understood that an Englishman is very easily overdosed with this artistic design. In dwelling-houses, for example, English gentlemen not of the Hebrew persuasion will be found to refuse anything beyond a very modest minimum of it. The dislike of obtrusiveness is, in fact, so decided amongst our better classes, that it frequently leads to an archaic poverty of design much to be deplored. But convenience of disposition is quite another thing. In this there is no limit whatever to the exercise of skill; and the high esteem in which this kind of architectural merit is held may, without hesitation, be instanced by an allusion to certain gentlemen well known who have built up thus, with little pretension, if any, to either science or art, a reputation which secures without an effort the most liberal returns in the profession. In a word, the high market value of such practitioners is one of the best possible illustrations of the degree to which the item of building contrivance is practically appreciated by the public. As another notable instance, there are not wanting cases in ecclesiastical practice in which a valuable connexion is kept up on the strength of similar merits of plan; where not only an unpretentious, but even an obsolete manner is accepted in respect of style, for the sake of sound experienced common-sense in general contrivance.

Take, now, the second department of the architect's province, namely,—building science or construction. It is in respect of this that the clever young officer of engineers, and the gentleman experienced in green-houses, were put over the heads of the entire architectural profession. It is in respect of this that the civil engineers as a body are supposed to affect contempt for the architects as a body, although I question, for my own part, whether they really do. In a word, it cannot be denied that particular attention is at the present moment demanded to the study of scientific construction, as the best means by which the architect can recover any prestige which of late years he may think he has lost.

However, I have none the less emphatically to point out the fact that if for a time the architect lags behind the pace of other professors of science, it is only in respect of such questions as apply to magnitude of scale and novelty of principle. In his ordinary beaten track he is still unrivalled. Neither the practical builder, with his empirical instinct, nor the engineer, with his mathematical elaboration, can either dispossess the well-trained architect of his common constructive ground, or even aid him where he may be at a loss.

It may be again affirmed, in the formula already adopted, that if the architect does not benefit his client pecuniarily in this respect alone to the full extent of his commission, and a good deal more, he is not an apt and well-trained man. His market value, therefore, is again clearly before us: the man of business, in building a residence for himself, or a church or school for his neighbourhood, or a warehouse or factory for his trade, not only feels that the ingenious and practised contrivance of all arrangements, at a cost of 5 per cent., is a thing that *pays;* but perceives also that the science which is brought to bear upon the construction is a second thing that *pays*, even if it cost another 5 per cent., which it does not. For, argues common sense, how far would 5 per cent. go in waste of material and labour? How far would 5 per cent. go in remedying inconvenience? How far in repairing structural weakness? What is 5 per cent. in business? A bagatelle: there is many a warehouse in London where 5 per cent. pays for little more than wrapping a thing up in brown paper.

To relieve for a moment the tedium of sustained argument, let me relate an anecdote. Some years ago a party of gentlemen, chiefly architects and builders, were invited to dine together. The architects arrived in public cabs; the builders in their private broughams. The contrast was pointed out, and the explanation asked for. "It is the difference," was the reply, "between 5 per cent. and 15."

By way of mentioning in passing a matter which must not be forgotten, let me here remark how important a point in the practical value of an architect to his client is the matter of a correct calculation of cost. It is not too much to say, that in a certain sense, all other qualities of excellence are vain unless this truly British principle be fairly met. An architect's estimate has been allowed to become a byword. This ought not to be. I believe in the case of every one of our profession, whose career has been signally fortunate in public works, such as Soane and Smirke, this one merit has been the foundation of success. An Englishman, in a word, will always pay liberally for a reliable estimate; and he will always complain bitterly of any disappointment in this respect, refusing to take any excuse whatever.

We may now turn to our third department—Building-Art. Here the accomplished architect is supremely master of the situation. This is the art of the beautiful in building; the long celebrated and right royally cherished fine-art architecture; queen amongst the arts; enthroned from the very dawn of civilization; to whose majesty the rest are handmaids; beside whose monuments all through the ages the common works of man's genius are but toys, and man himself a pigmy,—

working, one might imagine, under the behest of some Titanic agency unseen,—leaving in tremendous ruins scattered across the globe, that which is a puzzle really, hard to be solved by thoughtful men.

The abstract origin of this fine art is no more than this. Look at it as a first principle in all intellectual work, that grace and beauty must assuredly find a footing somewhere. Owen and Huxley may theorize for ever about the microscopic anatomy of monkeys and men; but if the real difference between the lower intelligence and the higher intellect is to be actually understood, we must, I think, start from this one point, and this alone. No bulk of brain, no conformation of skull, can ever cause a gorilla to see the beauty of the brightest flower of the woods; and no degradation of species, short of occasional disease, can ever deprive a *man*—be he but a Hottentot—of that relation to the multifarious beauty of the universe around him out of which come all his best enjoyments and all his aptitudes for mental development. It is a first principle, I therefore repeat, in the operation of human intellect in all works of design, that it shall combine with the useful the graceful; and in building, as may safely be said, grace of every kind, from playful prettiness to solemn majesty, seems to force itself upon the attention of the intellectual designer more perhaps than in any other sphere of the kind whatever. Hence, then, architecture the fine art. It began with the beginning: it has never wearied in its pleasant way from that beginning till now: it will never weary from now to the end. Five thousand years ago the savage decked out his wigwam as daintily as a savage could; and five thousand years to come, in the last and dreamiest age of the perfectibility of the species,—when the world is too refined to be worth living in any longer,—when humanity, having nothing further for which to keep awake, can only yawn and snuff itself out, the last attenuated lord of the creation will sink to rest in some pleasant chamber of design, on whose placid features the Battle of the Styles has imprinted neither a frown nor a scar.

But, at all events, here we are in the very feverheat of the world's progress; about equally removed, as perhaps everybody will acknowledge, from savagery on the one hand and perfection on the other; and it is not too much to say that these are the times of all times, and England the land of all lands, in which it would be voted a perfect anomaly for building to go without fair garments. That in this very age, and in this very country, there should be found people sufficiently perverse to raise a cry for the contrary, is at the same time to be expected. The curious mental law here exemplified has frequently been under discussion before now: and it is well understood that when any principle is most fully in the ascendant, then is the time for some one most flatly to deny it. So that the present universal popularity of architectural art is a thing not at all at variance with the enunciation of the riddle—what is an architect?

In this last of our three forms of the question of money value, it is certainly most remarkable how decidedly the general public of the present day signify their cordial appreciation of the architect's services. The demand for what is called a "neat elevation" governs every little shop-front in our back streets. Our very workhouses are notoriously made matter of artistic effect. Even police-courts and prisons are tricked out with their modicum of ornament, lest discipline itself should be too dismal to bear, or the felonious part of the public have reason to complain that we do not regard them as men and brethren.

It would be wasting your time to enlarge upon the market value of our agency in fine art. The historical monuments, of which there is not a country of the civilized world but possesses its share; the great public buildings of the day laboriously rising up in every centre of population; the temples of divine worship, of whatever faith, from primeval antiquity to the passing hour; the cenotaph of sorrow, and the tower of triumph; the gigantic theatre, and the pettiest restaurant; the palace of imperial receptions, and the wayside cottage of modest retirement,—all these are but the universal testimony of our race to the purchase of architectural art.

I ought to have included with these (our theatres and palaces, churches and cottages) the noble bridge in its fifty forms, the grand quay-wall, the mighty breakwater, the lighthouse of many welcomes; but you all know I cannot. Art has not yet reached these; the works of our engineers,—marvels of science,—have not yet bowed to the more fascinating yoke. But presently they will—inevitably they must; and we may, therefore, be satisfied meanwhile to wait. Still here lies the germ of a future conflict. That our engineers, as a profession, will adopt the practice of artistic design, I hold to be impossible; the elementary organization of the craft prevents it; the class of mind involved is not the artistic class; but whether the architects as a profession will embrace the practice of the more ponderous kind of construction, is a question of doubt. I hope they will; but to be done effectually it must be done by numbers. In a word, if our rising architects would at present turn their attention earnestly to the study of the building works of the engineer, I think the whole of these might, before long, be conquered to the authority of Art. Can anything be conceived more grandly suitable for architectural design than our Thames bridges? Why should they be so inevitably helplessly barren of endeavour after elegance or ornament? Look at the nakedness again of our lighthouses: why cannot the architect weave a little of the beautiful into their naturally graceful forms? To those who profess so much now-a-days to seek for novelty of style, let me say a word on this. For novelty of style, the best of all foundations is novelty of purpose: suppose we try the architectural hand on a few bridges, lighthouses, and piers for an experiment, and see what will come of the effort. But let this be borne in mind, there must be no sham and piecrust; no adaptation of mere cast-off clothes; no designing in such and such a style; no attempting to follow so and so's manner. At all events, what more prominently concerns us in this suggestion at the present moment may be put thus:—so well and widely acknowledged is the market value of the architect in respect of his charming art-work, that if he will but offer to apply it to engineering, I undertake to say the universal voice of the country (except, perhaps, the voice of the engineer) will applaud and encourage on every hand.

I now come to the least pleasurable portion of my inquiry, namely—to ask how it happens that at the present moment persons of education and good taste are found to come forward and assert roundly that the architect is of no market value at all? I must answer the question briefly, and you will excuse me, therefore, if I speak to the point. I blame the archæologists. It may be laid down as a rule that so long as the trained expert keeps to *business*, the untrained amateur will be his respectful admirer; but that directly he turns his specialty into a popular recreation, hundreds of idle intellects cluster round him and contest with him the possession of his very skill. As mere illustrations of this question of policy, note how carefully the medical and legal professions keep their science out of what is called the "popular" form. Ask military men what they think of the present fashion of soldiering for amusement. Look even at our own shrewd half-brothers, the engineers, and see how they fight shy of noble patronage and public debating clubs. I think it has been a most mistaken policy in our Mediæval architects to encourage as they have done the empirical and superficial sciolism of fashionable antiquarianism. The old *dilettanti* had their faults; but they were men of polish; and if their sentiments were somewhat affected, they were at least both graceful and harmless: but these new-fangled *savans*,—mild country curates, Roman Catholic priests the reverse of mild, rubbers of brasses, collectors of china, dealers in curiosities, pre-Raffaellite house-painters, ecclesiastical milliners, glaziers, and candlestick makers,—the more sincere their admiration the more hurtful their help. Fifty years ago architecture was, at the worst, the plaything of Egyptian explorers and Greek scholars; now it is the prey of a host of blackbeetles from Wardour-street.

The *enmity of amateurs* (I use the expression advisedly) is the basis of all the opposition which the architect of the present day has to contend with. Amateurs are always a professional encumbrance; and if a profession make pets of them, they become pests. In precise proportion to their earnestness, so are they pernicious. Of necessity shallow in their knowledge, they are of necessity self-satisfied in their opinions; and the more it is necessary to conceal their ignorance, the more they have recourse to arrogance. As regards architecture, in whatever branch, I contend that we have no need for any amateur element whatever; and I unhesitatingly assert that when we encourage what is called the praiseworthy interest taken by the educated public in our beloved art, and so on, in the expectation that the market value of our craft is being raised thereby, we are really establishing a partnership with any one who has an unfurnished head to let, by which we both depress the standard of criticism and lower the market value of skill. He who respects himself, the world respects him: he who underrates himself will find himself accepted at his own valuation.

I have thus set forth for your consideration the way in which I think the shrewd instincts of the English people are to be confidently relied upon by the architectural profession as appreciative of the value of professional services. I have asserted that the present affectation of contempt for our profession is only the ephemeral arrogance of petted archæologists and amateurs, in direct opposition to the views of the public at large. I have also endeavoured to explain that in order to uphold our pretensions to public usefulness we must, of course, maintain carefully, and indeed elevate still more, our standard of knowledge. I have ventured to direct attention especially to science as a field of profitable study and profitable practice. I have only to urge further that, for the sake of our market value, if no more, we ought to contrive to keep our æsthetical disputes to ourselves, and to avoid seeking help from the Philistines,—to agree to differ in taste without surrendering brotherhood,—and above all, to come to a determined understanding to allow no more architectural amateurs,—in fact, to tell such people plainly to mind their own business,—as they would very soon tell us if our positions were reversed.

As a last word I have this to say. There are tricks in every trade; but I know of no profession of men in England who, as a rule, more honestly and anxiously perform their duty—doing a large amount of work for very modest payment—than the architects; and I take the opportunity of winding up with a practical suggestion that, although we do not complain, it would be a well-merited compliment if the public would take the first opportunity of augmenting the money standard of our market value above the five per cent.; in fact, in plain English, to signify their sense of our high merits by raising our wages.

ARCHITECTURAL COPYRIGHT.

A CORRESPONDENT writes,—"Some time ago I designed and carried out the erection of a large and expensive bay window to a mansion. Can I protect my right of design so far as to have a claim in case that design is exactly repeated in another part of the same building? And if I can, what are the requisite steps to be taken?"

The answer, we fear, must be that he cannot obtain the protection he desires. It was proposed in a recent Copyright Bill to give architects protection for designs *on paper* (withdrawing it when the design was executed), but such was the apathy of the profession on the subject that even this was omitted in the protective Act which was passed.

A HINT FOR THE EXHIBITION OF NAVAL MODELS.

In the House of Commons, Lord R. Montagu has asked the Secretary of the Admiralty whether the statement was correct which had been made by Mr. Scott Russell, in a paper read at a meeting of the Society of Naval Architects, concerning the collection of models at Somerset House; viz., "That it had been thrust into a cellar—shut up in the dark—and was now effectually kept out of sight." In reply, Lord C. Paget said that "the models referred to were not so well placed at Somerset House as could be desired, owing to the want of suitable accommodation in the building; but at the same time, the statement of Mr. Scott Russell that they were thrust into a cellar was a great exaggeration." There can be no doubt, however, that those models are very ill placed at present, and are comparatively useless to the student of naval architecture, or to those who are interested in observing the progress of ship-building. Many of these models are of great beauty and of delicate and curious workmanship. There are other models of ships which are scattered here and there, in certain of the Government offices, in the Royal and some other collections, and in museums. These being odd and isolated examples have no great value; but if the whole of these illustrations of naval architecture, together with those pictures and prints which exist of our ancient and modern vessels, from the British corracle and Roman and Danish galleys, to the *Great Eastern* and the iron-clad *Warrior*, there might be formed a most instructive and interesting exhibition. Room could probably be found for such a purpose in the South Kensington Museum.

PAISLEY ABBEY, SCOTLAND.—*In course of Restoration under the Direction of Mr. Sedding.*

PAISLEY ABBEY, SCOTLAND.

LIKE most of the other more important ecclesiastical edifices of Scotland, Paisley Abbey was founded about the middle of the twelfth century. The event which more immediately suggested its erection was the death of the pious David I., who had himself been the founder of many churches in every part of the kingdom. The founder of the abbey was Walter, the first Steward of Scotland, who, having received as an exile a generous welcome from David, determined to perpetuate his sense of the king's kindness by erecting to his memory the Monastery of Paisley. The mason or architect employed was John Morrow, who must have been a celebrity of the period, since we find from the following sensible account of himself that Paisley was not the only town which he adorned with his skill:—

"John Morrow sum tym callyt was I
And born in Parysse certainly,
And had in keping al mason werk
Of Santandrays, ye hye kirk
Of Glasgu, Melros, and Paslay,
Of Nydysdall and of Galway.
I pray to God and Mary baith
And sweet St. John kep this holy kirk fra skaith."

The above inscription is copied from a tablet in the transept door of the Abbey of Melrose, which, as we see, was also one, and not the least important, of Morrow's productions.

The style of Paisley Abbey is Early English, though there are not wanting round arches in one of the two southern entrances.

In the edifice as it now exists there is very little to indicate which portion of the abbey was first erected, though the apparent age and character of some "built-up-arches" at the south-west angle of the monastic buildings might point out this as the locality of the oldest masonry still standing.

The entire completion of the buildings extended over more than one century. Indeed, the edifice was not constituted an abbey till 1219. Previous to that date it only ranked as a monastery. It is highly probable that the abbey reached its state of greatest perfection about the middle of the fourteenth century. At that time the tower and spire had been finished, while chancel, choir, transept, chapel, cloister, and monastery were grouped around in all their completeness.

How long the abbey remained in this finished condition does not exactly appear, though in all likelihood more than a century passed before any decided change occurred. About that period, however, viz., towards the beginning of the sixteenth century, the abbey, by the fall of the tower and spire, was visited by a disaster of the most serious kind. Of the cause of this calamity no authentic record has been left, though the tradition is probably correct which assigns it to lightning. The result of this misfortune was the entire destruction of the choir, chancel, and northern arm of the transept, while the nave was also so seriously damaged that the hasty erection of an ungainly wall or gable at its intersection with the transept alone saved the whole fabric from destruction. The repair of this crushing disaster never seems to have been seriously attempted: at least, in 1860, when Mr. Salmon first reported to the heritors, the portions of the abbey which had suffered from the fall bore all the marks of confirmed and ancient ruin. As for the architecture of the edifice, like most buildings of the same period, its merits are unequal. The west front is very imposing, and furnishes one of the best examples of the style which the northern division of the island can boast. With all this, however, it perhaps wants that living grace in its detail and outline which imparts in all cases so great a charm. The northern gable or elevation of the transept exhibits, on the other hand, great beauty in its detail; and now that its entire outline has been restored, and the tracery of its principal windows completed, presents a general aspect which few buildings of the period surpass. The restorations, so far as Mr. Salmon has yet been empowered to carry them out, consist of the re-erection of the northern porch, the completion so far of the northern wing of the transept, and some of the angle turrets, as well as a general renovation of bases, strings, and other mouldings. Besides these operations, however, at the architect's suggestion, the soil which the accumulation of centuries had heaped round the walls, to the height in some cases of nearly 10 feet, has been entirely removed. Some ungainly erections, in the shape of walls and houses, which shut up the abbey on the west and north, have also been taken down; producing, with the removal of the soil, a result far surpassing the highest expectations of the promoters of the undertaking.

Within, as on the outside, the burying of the dead had raised the level of the floors 3 feet or 4 feet above the bases of walls and piers. The whole of this accumulation of poisonous soil has now been taken out; and for the first time for three or four centuries the nave is again exhibited in all the imposing dignity of its ancient proportions. As this portion of the abbey is still used for the parish church, among its other renovations it has been supplied with a new pulpit, and new seating arranged to accommodate nearly 1,110 sitters. In the mean time, and only from the want of funds, the further work of restoration is delayed. This want, we trust, will not be of long duration; and our Paisley friends will excuse us for reminding them that the old Scotch proverb "a begun turn's half ended," is only true when they who begin do not stop. The preservation and restoration of these noble witnesses of our ancient faith and progress are too important a consideration to be kept in abeyance by any obstacle which skill and energy may overcome.

CHARING CROSS BRIDGE.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting on April 28th, the paper read was, on "The Charing-cross Bridge," by Mr. Harrison Hayter.

It was stated that this bridge consisted of nine spans,—six of 154 feet and three of 100 feet,—the centre opening of the Hungerford Suspension-bridge having been divided into four spans each of 154 feet, that on the Surrey side into two spans also of 154 feet each, and the opening on the Middlesex side into three spans each of 100 feet—the superstructure over the latter being fan-shaped. The width of the river, at the site of the bridge, was 1,350 feet. The greatest depth of water between the two brick piers of the original bridge was 13 feet below low-water spring tides, and the average depth was about 9 feet; the rise of spring tides being 17½ feet. The level of the rails was 31 feet above Trinity high-water mark, and there was a clear minimum headway under the bridge of 25 feet above the same datum.

The superstructure was carried by cylinders sunk into the bed of the river, and by the piers and abutments of the suspension-bridge, the abutments having been considerably lengthened. The cylinders, excepting at the fan end, were 14 feet diameter below the surface of the ground, and 10 feet diameter above, the junction between the two sizes being effected by a conical length. There were four piers formed of these cylinders, each consisting of two cylinders, 49 feet 4 inches apart from centre to centre. They were of cast iron, 1¼ inch in thickness throughout, and the circumference was divided into segments, with interior flanges round all the edges, through which the segments were bolted together; and a horizontal interior rib was also cast in the middle of each segment. There were thus continuous vertical lines of ribs, securing a strong columnar arrangement.

The strata through which the cylinders were sunk consisted of mud and gravel, of varying thicknesses, overlying the London clay. The sinking was effected by excavating the material from the inside—at first by divers, but after the London clay was reached and the water was pumped out, in the ordinary way—and by weighting the cylinders, to an average load of 150 tons each. These cylinders were sunk to depths of 52 feet, 62 feet, and in one case to 72 feet, below Trinity high-water mark. They were filled with Portland cement concrete up to where the conical length commenced, and above with brickwork, set in Portland cement mortar, to the underside of the granite bearing blocks, which were 2 feet 6 inches in thickness, and projected 1 inch above the top of the cylinders, in order that the weight might not come on the upper edge of the iron-work. With a view of testing the strength of the foundations, the two cylinders in the pier nearest to the Surrey side, after being completed up to the level of high water, and filled with concrete and brickwork, were each weighted with 700 tons, being about equal to the greatest load they could possibly have to sustain, supposing the four lines of rails on the bridge to be loaded with locomotive engines. This caused the cylinders to sink permanently 4 inches. To bring the other cylinders to a bearing, so as to prevent any settlement after the completion of the bridge, from the weight of the permanent and moving loads, they were each weighted with 450 tons, when it was found that they permanently sank, on an average, 3 inches each. Each pair of cylinders forming a pier was connected together transversely by a wrought-iron box girder, 4 feet deep, which also served as a cross-girder for supporting the roadway. Assuming the four lines of way on the bridge to be loaded with locomotive engines, the pressure on the base of the cylinders would amount to 8 tons per square foot, and on the brickwork at the top of the cone to about 9 tons per square foot.

The superstructure of each of the 154 feet openings consisted of two main girders, to the under-side of which were suspended cross-girders, for carrying the roadway platform. These cross-girders extended beyond the main girders, and formed a series of cantilevers on the outer sides, for supporting two footpaths, each 7 feet wide in the clear. The main girders were of wrought-iron, and were not continuous, but extended only over one opening. Each girder had to support, inclusive of its own weight, a maximum distributed load of 750 tons. The extreme depth of these girders was 14 feet, and the depth between the centres of gravity of the top and bottom members was 12 feet 9 inches. The sides of the girders between the bearings were divided into fourteen equal parts by a pair of vertical bars, connected to the top and bottom by pins of puddled steel, 7 inches diameter at the ends of the girder, decreasing to 5 inches diameter at the centre; and each division contained a double set of two diagonals crossing each other. The top and the bottom of these girders were of boiler-plate, and consisted of horizontal tables 4 feet and 3 feet wide respectively, and of four vertical ribs, the two outer rows being 24 inches deep, and the two inner rows 21 inches deep. The aggregate thickness of the plates in the horizontal table of the top in the centre of the girder was 8⅛ inches, and in the bottom 3⅛ inches, without the angle-irons, and of 4½ inches and 4⅛ inches respectively with the angle-irons, but exclusive of the angle-iron covers. It was arranged that, with the greatest load, the maximum strains should not exceed 4 tons per square inch in compression, and 5 tons per square inch in extension. All the rivet-holes were drilled by machines capable of drilling several holes at one time. This plan was, under the circumstances, less costly than punching, besides which a great saving was effected in putting the work together. The diagonals acting as ties were of Howard's rolled suspension links, each separate tie being composed of two or three links, as required, riveted together. The diagonals acting as struts were each in one solid forging, and were united together in pairs by zigzag bracing of wrought-iron. In the centre of the girder, where the diagonals acted as both struts and ties, the pairs were united together in the two central spaces by the zigzag work. The dimensions of the struts varied from 12 inches by 3 inches at the ends to 6 inches by 2½ inches in the middle, and of the ties from 12 inches by 2½ inches at the ends to 6 inches by 2 inches in the middle. The ends of the girders over the piers were boxed in, with plates ⅝ inch thick, stiffened by angle and T irons. Over the cylinders the girders rested on sheet-lead, laid upon the granite blocks. On the brick piers and the Surrey abutment they rested upon roller bed-plates. The girders were put together in place on a staging, the upper and lower platforms of which were accurately adjusted to the proper camber. The whole of the plates were drilled, and the struts and ties were completed, before being sent to the works. The weight of each main girder was 190 tons. One of the main girders was tested when in its place with a distributed load of 400 tons, when the greatest deflection observed was 1⅜ inch, and the permanent deflection after the load was removed was ¼ inch.

The cross girders of the 154-feet openings were of wrought-iron, and were generally similar in character to the main girders, from which they were suspended, at intervals of 11 feet apart, from centre to centre. They were 4 feet deep in the middle, and 2 feet 1½ inch deep where the cantilevers were united to them outside the main girders. The top and bottom consisted of two plates, 18 inches wide by ⅜ inch thick, the sides being of lattice bars united to the top and bottom by angle-irons. The cantilevers decreased from 2 feet 1½ inch deep at their junction with the cross girders to 1 foot 2 inches deep at their extremities. Each cross girder, including the two cantilevers, weighed 9 tons. When two of these cross girders, without the cantilevers, were tested with a load of 140 tons, equivalent to 70 tons on each girder, the maximum deflection in the centre was 1 inch, and the permanent deflection when the load was removed was ¼ inch.

The superstructure of the three 100-feet openings of the fan end was supported by the brick pier and abutment on the Middlesex side of the suspension bridge, and intermediate to these by two rows of seven and of nine cast-iron cylinders respectively. These cylinders were 10 feet diameter below the ground level, the outer ones being 8 feet diameter, and the inner ones 6 feet diameter above that level. They were sunk to depths averaging 40 feet below Trinity high-water mark, and were filled with Portland cement concrete to about 5 feet above that level; but it was not considered necessary to fill in the remaining portion of these cylinders. On account of the great width of the fan end, which increased from 59 feet 4 inches at the brick pier to 168 feet at the abutment, the plan of supporting the roadway on cross girders, suspended from outside main girders, was inadmissible; and as it was not desirable to introduce intermediate main girders, projecting above the line of rails, the roadway was carried by interior plate girders, laid at right angles to the piers and abutment, and by the outside main girders, which were laid at the angle of inclination of the fan. The outside main girders were of the same depth, and were generally of the same character, although lighter in all the parts, and were fixed at the same level, as the girders of the 154 feet openings. The interior plate girders were of the ordinary construction, 5 feet deep, or one-twentieth of the span, and weighed 26 tons each. The triangular spaces between the outside main girders and the outer interior plate girders were filled in with cross girders, terminated by cantilevers, projecting beyond the face girders, and similar to those outside the main girders of the 154 feet openings.

The roadway platform over the 150 feet openings consisted of planking 4 inches thick, spiked to longitudinal timbers, 15 inches by 15 inches, placed underneath the rails, and bolted to the cross girders. Over the fan end, the platform consisted of planking 6 inches thick, secured to the girders. The footpath platforms were of planking 6 inches thick.

The first cylinder of the Charing-cross bridge was pitched on the 6th of June, 1860, and as the bridge was now on the eve of completion, its construction would thus extend over a period of about three years. The weight of wrought-iron in the bridge, including the steel pins, was 4,950 tons, and of cast-iron, 1,950 tons. The total cost, including the abutments, would be 180,000*l.*, or 1*l.* 15s. per square foot, and 131*l.* per lineal foot. The cylinders of the 154 feet openings cost complete 20*l.* per lineal foot; the outer cylinders of the piers of the fan end cost about 12*l.*, and the inner ones about 10*l.* per lineal foot. The bridge was designed by Mr. Hawkshaw (President Inst. C.E.), the engineer to the Charing-cross Railway Company, and was carried out under his immediate supervision, Mr. John H. Stanton being the resident engineer. Mr. George Wythes was the contractor for the construction of the railway, but this bridge was sublet to Messrs. Cochrane & Co., whose representative on the works was Mr. Joseph Phillips.

THE IMPOLITIC TAX ON PUBLIC CHARITIES.

WE object strongly to any proposal to levy a tax on the property of our charitable institutions. In the metropolis—and the case is similar throughout the country—many most valuable establishments, although they are possessed of funded and other property, have a struggle for their existence year after year. In many instances it is absolutely necessary for hospitals and similar institutions to have funded or other property to fall back upon, particularly when times are bad, and when, by the increase of sickness or calls, there may be more than the average demand for assistance. Take for example the Islington Fever Hospital, an institution of the utmost value. In the year ending December 31st, 1861, the outlay, but for the sale of 750*l.* of stock, Reduced Three per Cent. Annuities, which produced 691*l.* 17s. 6d., would have been considerably over the income. On the 31st of December, 1860, the balance in the hands of the treasurer was only 4*l.* 10s. 4d. During the year 1861, the whole amount of donations and subscriptions was 1,047*l.* 10s. 3d.; from unions and parishes who had sent patients, 417*l.* 10s. 6d.; from non-subscribers and others, on account of domestic servants, 144*l.* 15s.; dividends on Government Stock, 67*l.* 3s. 6d.; rent on account of Coldbath-fields estate; some other items,—amongst them a donation towards providing a carriage for the exclusive use of fever patients,—and the six hundred and odd pounds for the Government Stock above mentioned, made a sum of 2,669*l.* 17s. 11d. The year's expenses were 2,275*l.* 18s. 1d.,; leaving in the hands of the treasurer and secretary 398*l.* 19s. 10d.; so that, but for the sale of stock, there would have been a deficiency in this year of nearly 300*l.* It is true that, as regards this hospital, the amount of the proposed tax would not be large; still, under the conditions, this could be but ill spared; and in other cases the charge would be considerable. As regards St. Bartholomew's Hospital, for instance, the income of which is stated to be 36,000*l.*, the tax of 7d. in the pound on this would amount to 1,050*l.* per annum, a sum which, making the yearly cost of a patient 25*l.*, would serve for the support of forty-two sufferers; but, in the way that hospitals are managed, this sum would be of advantage to more than five or six times that number.

St. Luke's Hospital, for the treatment of insanity, requires additional support rather than to be still further crippled, as it would be by the imposition of this tax: and in most of the metropolitan hospitals there are more demands for admission than the funds will allow of.

At the Manchester Infirmary the income in 1862 was 11,921*l.* 19s. 5d., the expenditure 11,468*l.* 19s. 5d.; but there had been an unexpected legacy during the year of 4,301*l.* 10s. The tax, if levied on this hospital, would be very heavy. We might multiply these instances, but it does not require much argument to show that it would be a great error to lay a Government tax upon establishments of this description, which have been founded and endowed by charitable individuals for the purpose of succouring suffering humanity. In certain cases the intentions of those who have made charitable bequests have either been perverted, or the original intention has not been carried out in correspondence with the existing circumstances; but for the most part not only the hospitals, but also schools and other institutions, particularly those which are of comparatively recent date, extend in usefulness in correspondence with the extent of funds at their disposal.

In order to show more clearly the effect which the withdrawal of the sum of even a few hundred pounds a year would have on some of these charities, we give the following statement in connexion with the Manchester Infirmary. The income in 1862 was 11,921*l.* 19s. 5d., and for this sum the number of those admitted into the house or who were in other ways attended to, was, in-patients, 1,858; out-patients, 24,924; home-patients (persons attended to in their own homes, and assisted with medicine and advice), 3,733; fever-ward patients, 188: total, 30,703. The average cost of each patient was about 7s. 8d. It will thus be seen to what a great extent the appropriation of each 100*l.* would withdraw the most necessary medical relief from the poor.

In 1861 the number of cases received at the Islington Fever Hospital was 663, the cost of the year being 2,275*l.* 18s. 1d. This shows a charge of about 3*l.* 8s. for each, and all are in-patients, many of whom obliged to remain for a considerable period in the wards.

Look, for another instance, at the Child's Hospital in Great Ormond-street, and the City Mission, the benefit of which amongst the masses of the London poor can only be appreciated by those who have seen its effect in connexion with this society. The number of missionaries who are sent into the London shadows depends upon the amount of the income. To levy a tax upon this would be the means of depriving neglected districts of the advantage of the labours of some of these earnest men. The value of the amount which would be derived from this source by the State would be but trifling in comparison with the evil which would result. Government has wisely withdrawn their proposition; but these observations are nevertheless needed.

UNCOVERING OF THE MEMORIAL OF THE EXHIBITION OF 1851.

THE arrangements for this ceremonial have now been determined on. The Council and Executive Committee of the Memorial Committee having learned that a later day than the 5th of June would be more convenient for some of the members of the Royal Family, took the pleasure of Her Majesty and H.R.H. the Prince of Wales on the subject, and it has consequently been altered to the 10th of June. The ceremony will take place partly in the Horticultural Garden and partly in the Exhibition Building, which for the day is to be open to visitors to the garden.

The general nature of the proceedings may be described as a reception, a procession, the presentation of addresses, and the uncovering of the Memorial, as executed by Mr. Durham.

The bodies who are to have the honour of taking a prominent part in the proceedings of the day are, the Committee of the Memorial of 1851, by whose persevering exertions for years the Memorial has, through many difficulties and much labour, at last reached its present crowning point; and the Council of the Society, who are the hosts of the great personages who are to honour the garden with their presence.

The Memorial Committee will receive their Royal Highnesses the Prince and Princess of Wales on their arrival at one of the entrances of the Exhibition building, and will conduct them to the platform under the western dome. Here the guests who are to walk in the procession will assemble. Every one who takes part in it is required to be in uniform, court dress, or robes of office. During the assembling of the guests music will be performed both in the building and in the garden.

The procession will move down the nave of the building, and, turning to the left, ascend to the refreshment rooms overlooking the garden. The first idea was to conduct their Royal Highnesses to this spot chiefly for the sake of the view of the garden to be obtained from the refreshment windows, and to return from thence to the front of the great fountain, and there, on a large dais, to perform the greatest part of the ceremonies of the day. The obstruction which such an erection, in the very centre of the garden, would offer to the view of the spectators, led to this plan being abandoned in favour of that now adopted. In front of the refreshment rooms, at the bottom of the garden, and directly over the middle portico, is to be erected a balcony capable of holding the whole procession, sloping down in successive tiers, thus forming a splendid bank, in the front rank of which their Royal Highnesses will take their place. Here, in full view of the crowds in the garden, high enough to be seen by every one, and not too high for recognition, the chief ceremonial of the day will take place.

The first part of this will consist in the Council of the Royal Horticultural Society handing an address to their Royal Highnesses, and receiving a reply.

Their Royal Highnesses will then be seated.

A short piece of music will be performed. At its conclusion the Executive Committee of the Memorial Committee will come forward and read an address. H.R.H. the Prince of Wales will reply. His Royal Highness will then order the uncovering of the Memorial. A flourish of trumpets will announce the fact, and artillery from a battery behind the Conservatory will proclaim it to the public without. Their Royal Highnesses will then resume their seats, and three united bands will perform a piece of music.

On its conclusion, the procession will leave the balcony and descend into the garden, and escort the Royal party round the garden. They will first proceed up the left side to the Conservatory: they will then pass round the large basin, so as to view the Memorial more closely on every side. Returning to the Conservatory they will resume their tour of the garden, and take their departure at the Council-room entrance. The whole route of the procession will be marked out with barriers and banners.

THE VENTILATION OF UNDERGROUND RAILWAYS.

THE ventilation of the Metropolitan Underground Railway still requires improvement. At the King's-cross station, the sulphurous fumes which escape from the tunnel are both unpleasant and unwholesome; and some of the other stations are even much worse. This condition of the atmosphere cannot be good for passengers, particularly those who are in delicate health; but on the numerous men who are employed, we are told that the effect of remaining for many hours in the bad air which is to be met at several points is highly injurious, and "more," some say, "than a man can long stand."

We have been in many mines, but do not remember meeting with anything so suffocating as the air is here. At some times it is much worse than at others; the matter depending, in a measure, on the direction of the wind and state of the external atmosphere. Certain improvements have been made, but still more effectual means are required for the ventilation of the tunnels, and also of most of the stations. The number of trains which pass and repass in each day is very large; but that is required for the public conve-

nience. On Sundays forty-eight trains pass down, and the same number up; in all ninety-six: but on week days there are seventy-five down and the same number up, in all a hundred and fifty trains. This rapid succession of trains, which on week days continues from six o'clock in the morning until twelve o'clock at night, makes extraordinary means of ventilation necessary. The experience here gained should induce those engaged in new works to endeavour to prevent what is here complained of. By some alteration in the locomotive it may be possible still further to consume the gases; but until this be done many more air-shafts than are in the tunnel from King's-cross westward are required.

"THE LAST SUPPER."

AT the German Gallery, in Bond-street, will be found a remarkable version by Mr. H. C. Selous, of the well-known "Last Supper," painted by Leonardo da Vinci, on the wall of the Dominican Convent of Santa Madonna della Grazzie, in Milan. This noble work is, perhaps, better known all over the world than any other picture, through copies and engravings; notably by Raphael Morghen's very inaccurate translation. Mr. Selous has chiefly availed himself of the celebrated copy by Marco Oggione. It is well remarked in Mr. Wornum's excellent "Epochs of Painting, Ancient and Modern," that the mere fact that Oggione's copy was painted for people well acquainted with the original in its perfect state, by a distinguished scholar of Leonardo, ought to be a sufficient guarantee for its fidelity. Mr. Selous has referred largely to this in completing the present restoration; but he has also availed himself of the more important privilege of perusing and working from the original studies made by Leonardo. The copy by Oggione, was purchased many years ago, on the Continent, by Sir Thomas Lawrence, for the English Royal Academy of Arts, where it is now located. It has become invaluable as the most authentic record which is known to exist of its great original. But Sir Thomas Lawrence's homage to the fame of Leonardo did not terminate with this acquisition. Having heard of the existence of thirteen of the original studies made by Leonardo for "The Last Supper," he left no stone unturned to become their possessor; and after the most indefatigable researches, and the expenditure of a very large sum of money, he became possessed of no fewer than twelve of the number. These drawings, which are executed in coloured chalks, are of a most vigorous character, and seem to confirm in no slight degree the reputation for fidelity of Marco Oggione's copy. The chief object of the "restoration" by Mr. Selous is, that the picture may be repeated by Messrs. Day & Son, in chromolithography, at such a price as to place it within reach of a large circle. The painting will do much to advance the reputation of Mr. Selous. The versatility of his talent and the extent of his industry, are alike remarkable.

THE PALACE OF WESTMINSTER.

THE thirteenth report of the Commissioners on the Fine Arts has been issued. It states that, as the whole scheme of decoration for the palace has been considered and decided; and, trusting that the series of works now in progress can be carried on to their completion, it does not appear that the commission need be continued to superintend the execution.

The commissioners report that Daniel Maclise, R.A., has brought to a successful and highly satisfactory termination the large wall-painting, executed in the water-glass method, representing the meeting of Wellington and Blucher after the Battle of Waterloo; and that he has already begun the corresponding painting representing the Death of Nelson.

Anticipating the same industry on the part of Mr. Maclise as he has hitherto manifested, they recommend that, assuming willingness on his part, such portions of the Royal Gallery be subsequently intrusted to him as may still produce a satisfactory arrangement and a relative completeness.

In the Queen's Robing-room, William Dyce, R.A., has, since the date of the last report, been occasionally employed on the frescoes from the legend of King Arthur. The stipulated remuneration for the entire series having been long since received by him, the reporters say that they have only to express their earnest hope that he will see the importance of prosecuting the work with greater assiduity; more especially since his exclusive occupation of the apartment must occasion great inconvenience to her Majesty.

In the Peers' Robing-room, John Rogers Herbert, R.A., has nearly completed a large wall-painting, representing "Moses bringing down the Tables of the Law to the Israelites." The delay has been chiefly in consequence of frequent experiments by the artist in the water-glass method of painting; but, as Mr. Herbert now appears to be satisfied as to the technical process to be adopted, there is no reason why in future he should not proceed much more rapidly.

Charles West Cope, R.A., who has undertaken the Peers' Corridor, has prosecuted his work with equal ability and industry. Five out of the eight paintings of which the series is to consist have been already finished, and the designs for the remaining three have been approved.

In the Commons' Corridor, Edward Matthew Ward, R.A., has completed four of the paintings, executed in fresco, and a sketch for a fifth has been approved.

Among future undertakings, requiring less time, may possibly be included the re-painting of some of the earlier experimental frescoes in the Upper Waiting-hall.

At the close of their report the commissioners say:—"We cannot conclude this our final report without desiring to offer our testimony to the professional skill, as well as the activity, the zeal, and the uprightness with which our secretary, Sir Charles Eastlake, has, during a period of twenty-one years, fulfilled an important and sometimes an invidious task. We know that Sir Charles Eastlake's services were fully appreciated by his Royal Highness the Prince Consort, and we venture to hope that some regard may be shown to those long and meritorious services."

SCULPTURE BY LIVING ARTISTS IN THE HORTICULTURAL SOCIETY'S GARDEN, SOUTH KENSINGTON.

ALTHOUGH we cannot speak of the first exhibition of sculpture here as a great success, it leads us to anticipate well for another year, and most certainly has the effect of improving the gardens and conservatory immensely. Their appearance just now is charming.

Out on the terrace in front of the conservatory is Durham's great statue of the Queen, in bronze, which was originally intended as the crowning statue for the Memorial of the International Exhibition of 1851. This fine figure has been produced in metal by Messrs. Elkington's process of depositing by electrotype, and is a fine specimen of this mode of reproduction of works of art. By this method the cost of bronze statues is reduced, and all risk of imperfect castings, of course, entirely done away with. As our readers are aware, this figure is not to surmount the Memorial, but in its place will be one of the late Prince by the same artist. This figure has also been completed by Messrs. Elkington, and will be fixed on the pedestal in a few days more, to be ready for the public inauguration by the Prince and Princess of Wales in June next. There are several other fine models of figures in the collection. Messrs. G. G. Adams, John Bell, E. Davis, Joseph Durham, Earle, J. Edwards, Fontana, J. H. Foley, E. J. Kuntze, Lawlor, Lynn, MacDowell, Marochetti, W. Calder Marshall, Monti, Munro, Noble, Papworth, Ruddock, Edward B. Stephens, Thorneycroft, Thrupp, Weeks, J. Sherwood Westmacott, and Woodington, are the chief contributors.

THE BRIDGE OF THE LONDON, CHATHAM, AND DOVER RAILWAY, AT BLACKFRIARS.

THE foundation-stone of this bridge was laid on the 2nd instant by Lord Sondes. The new railway bridge will run across the Thames only a few yards from the new Blackfriars Bridge. The railway bridge (of which we have given a view), will have five spans, the centre one being 188 feet, the second and fourth 177 feet 8 inches, and the first and fifth 163 feet span. The abutments will be of brickwork, cased with Portland stone, and the foundations taken down to the London clay, at a depth of 27 feet below Trinity high water. The abutments will be built in coffer-dams of the ordinary construction, but the largest ever executed in this country. The foundations for the piers will be laid at a depth of 55 feet below Trinity high water; and, in order to get to this depth without the expense and inconvenience of coffer-dams, large wrought-iron caissons, 18 feet in diameter, will be sunk into the bed of the river till the required level is reached, when the brickwork will be commenced inside, and carried up 2 feet below low-water line. At this point the masonry of the piers commences, and will be laid within a temporary caisson to 5 feet above Trinity high water. From this height to the level of the underside of girders the piers will consist of clusters of cast-iron columns, of which one will be under each girder. The girders, on the lattice principle, will rest on the tops of the columns, and the headway afforded for navigation will be 30 feet 3 inches above Trinity high water.

The London, Chatham, and Dover line has already one station open,—the Victoria at Pimlico; and the line now in progress, as many of our readers must be already aware, is to obtain a City terminus, irrespective of the South-Eastern line, which it joins at the Norwood Junction. At present the line is now open from the Elephant and Castle to Camberwell and Herne Hill, and is being proceeded with through Dulwich to the Crystal Palace, and thence to Beckenham, from whence a communication will be made with the South-Eastern line, so that, in addition to the stations at Pimlico and Farringdon-street, there will ultimately be stations also in Cannon-street, at London Bridge, and Hungerford. During the building of the bridge a passenger station will be erected in close proximity to the southern abutment of the bridge. It will be called the "Blackfriars Station." This will be opened for traffic in September next, and will be the City terminus of the railway until the completion of the bridge, which will be accomplished by May, 1864. The works between the present temporary terminus of the metropolitan extension of the line at the Elephant and Castle and the Blackfriars Station are being carried on with vigour, and it is expected that the company's line direct from Victoria Station to Beckenham will be ready for opening in July next.

COMPETITION.

Malvern Proprietary College.—Two correspondents assert that the Council received drawings in competition after the date fixed, December 18th, and call for an explanation. The Council should feel themselves bound to place their conduct in a proper light before the profession.

LIVERPOOL EXCHANGE BUILDINGS COMPETITION.

THE Committee have received nearly fifty sets of plans in answer to their advertisement, some of which are said to possess great merit. The old Sessions House is being now cleared out for their proper exhibition, firstly to the Committee, and afterwards to the public. None but members of the Committee will be permitted to see them until the public exhibition takes place.

CHURCH-BUILDING NEWS.

St. John's-wood, London.—The foundation stone of Abbey-road Chapel, St. John's-wood, for members of the Baptist denomination, has been laid on the site selected, adjoining the Abbey-road. The Byzantine style of architecture has been adopted in the erection of the chapel, which it is estimated will cost about 3,000*l.*, and accommodate 1,100 persons. The cost of the freehold site was 2,000*l.* The first step taken was on the 10th December, 1862, when a meeting was held at the Eyre Arms, under the presidency of Sir S. M. Peto, M.P. The chapel has a portico with two arches, a semi-circular apse, and two towers with open belfries and spirelets.

Kensington.—The foundation stone of a new Wesleyan Chapel was laid on Thursday week in Warwick-gardens, Kensington. The design has been furnished by Messrs. Lockwood & Mawson, and consists of a red brick building with Bath stone dressings, finished internally with iron columns and stained deal pews. The contract, for nearly 5,000*l.*, has been taken by Mr. N. Simmonds, of Harrington-street, Hampstead-road.

Hitchin.—All Saints' Church, Clifton, Beds, has been reopened. The building, which is of the twelfth or thirteenth century, was in a very dilapidated condition, and insufficient in accommodation. To meet these requirements, a new north aisle has been erected, the nave and chancel restored, and the whole of the nave, aisle, and chancel, reseated with uniform open seats. The chancel fittings are of Baltic oak. The chancel is paved with Minton's ornamental tiles, whilst Staffordshire tiles have been used for the nave and

isle. The pulpit, which is open, is of stone inaid with coloured marbles, and is surmounted by a chaste brass reading-stand and candelabra, by Skidmore, of Coventry, who supplies the whole of the lighting apparatus. A new organ has been erected in the north chancel by Messrs. Bevington. The stained glass windows, by Hardman, are entirely new, and the subject of the west window is "The Judgment Day." Our Saviour is represented as sitting in judgment: on his right hand a multitude are being crowned with glory, and on his left another multitude are passing into perdition. In a small two-light window in the south side of the nave there is a representation of "The Annunciation." There is also a window of stained glass in the north chancel. The other windows are of cathedral green glass, with light borders. The sedilia and piscina in the chancel have been re-sculptured and are restored. The style of the new aisle is Geometrical, and it is built of the sandstone found in the neighbourhood, with Bath stone dressings. The whole of the work has been carried out under the care of Mr. Haycock, jun., of Shrewsbury, the architect, by Messrs. Warren and Mr. G. Jeeves, of Hitchin, and Mr. Davies, of Clifton. The hot-air apparatus was supplied by Mr. Dodwell, of Shrewsbury. The entire expense has been borne by the patron, Mr. Mills.

Caxton (Cambridge).—The parish church of St. Andrew's, Caxton, was re-opened for divine service, after restoration, on April 9th. The restoration has been carried out under the direction of Mr. W. White, architect. The large windows, which were of Perpendicular character, and posterior to the date of the church, were removed, and their place supplied by Early English windows of due proportions. The proportions of the chancel have been restored, the chancel descending by one step from the nave. The original intention of this was judged of from the discovery of the old sill-stone. The chancel stalls and open sittings, prayer-desk, lectern, and pulpit, are of stained varnished deal. The entire expense, about 900*l.*, has been met by the parishioners, the neighbouring clergy and gentry. The expense of the restoration of the church was met partly by the dean and canons of Windsor, and partly by Mr. V. Beldam, of Royston, the lessee of the great tithes.

Pont-Lottyn.—The foundation-stones of Pont-Lottyn Church and Fochrhiw school-room have been laid. Pont-Lottyn is about two miles distant from Fochrhiw. The ceremonial was attended by visitors who came by the Dowlais Iron Company's railway, as did the Bishop of Llandaff on the occasion. The church consists of a nave, north and south aisles, apsidal chancel, south chancel-aisle, and vestry on the north side of the chancel, with the warming-apparatus chamber under it. The materials are native stone walling, with red brick quoins and windows, with bands of red bricks at intervals externally. The style is Early First Pointed. The bell-turret is placed over the chancel-arch. Internally, the nave arcades consist of three wide arches on each side of red and white bricks, resting on Bridgend stone cylindrical shafts with Bath stone caps and bases; the chancel and other arches being treated in a similar way, and the chancel lined with red and white bricks. All the seats are free and unappropriated, and will seat 350 people. The chancel is fitted up with stall-wise seats, prayer-desk, lectern, altar and super-altar, 8 feet long, on a foot-pace raised on four steps; also altar-rail, sedilia, and credence. The pulpit is placed against the north pier of the chancel-arch. In addition to the usual font there is a large bath made for the purpose of baptizing adults by immersion: this is placed, together with the font, close to the west door. The chancel-floor is laid with tiles. Owing to the peculiarity of the site the chancel will be a great height externally, as the ground falls 7 feet from west to east, so that the cill of the east window will be 20 feet from the ground. The roof of the nave is divided into three bays by arched principals, resting on stone corbels; the intermediate rafters being boarded on the under side; making a pentagon with vertical ribs 2 feet apart. The chancel-roof is covered and boarded, with ribs in a way similar to the nave. The aisle roofs are lean-to ones, with rafters and principals boarded at the back. The external covering is native stone slate. The architect is Mr. C. Buckeridge, of Oxford, and the builders are Messrs. James & Price, of Cardiff.

Bakewell.—The church here has, within the last few years, been adorned internally by various benefactors, who have erected stained-glass windows and otherwise beautified it. A new western gable window has been inserted in the Geometrical Gothic style, in keeping with the earlier portions of the church, and in place of the insignificant window which previously occupied the gable. This new window has been glazed by Messrs. Clayton & Bell, of London, with a representation of the Baptism of our Lord. In addition to the above work, the whole western wall has been decorated by Mr. Castell, decorative artist. These works have been all carried out under the direction of Mr. G. Goldie, of London, architect.

Liverpool.—The newly-erected Independent chapel, Norwood-grove, West Derby-road, has been opened for Divine service. The structure, which is of Gothic architecture, has been erected in accordance with plans furnished by Messrs. Poulton & Woodman, of Reading. Mr. Nelson, of Liverpool, was the sole contractor for the work, which it is estimated will cost more than 4,500*l.* The erection is of red sandstone, from the quarries in the immediate neighbourhood, with white Cheshire (Stourton) stone dressings. It is a parallelogram in form, the main entrance being through two doorways coupled under one arch, beneath a four-light window, which forms the principal architectural feature of the elevation, and fronts towards the West Derby-road. A stone porch forms the front entrance into a corridor divided from the chapel by a glazed screen of Gothic design, with doors at either end leading to a gallery constructed at the end of the chapel opposite the platform. On either side of the entrance porch is a turret, and the front is flanked on each side by semi-octagonal projections containing the gallery staircases. The chapel is 82 feet in length, 43 feet in width, and 42 feet in height from the floor to the apex of the ceiling, and will afford accommodation for from 850 to 900 persons. All the seats are open benches, formed of pitch pine and varnished; and the gallery, constructed of the same material, has open ironwork in keeping with the other decorations of the building. The windows are the workmanship of Messrs. Edmundson & Son, of Manchester. The front and side windows are all formed of rolled cathedral quarries, with illuminated borders and foliated tracery, except the principal window, which consists of geometrical lights, stained and painted. The ceiling, which is vaulted and plastered, is divided into bays by groined ribs springing from stone columns attached to the walls, with carved capitals of characteristic foliage. In lieu of a pulpit, an octagonal platform, 13 feet in diameter, has been constructed within an apse at the extremity of the chapel. This structure is of Caen stone, divided into panels, each containing two quatrefoils, filled with open ironwork, through which either hot or cold air can be forced at pleasure. The angles of the cornice of this platform are filled with stone carving of varying design, and the apse, which is divided from the main body of the chapel by a moulded arch supported on carved capitals and foliated bosses, is enriched with a series of carvings in stone of natural foliage conventionally treated. The stone carving throughout the building has been executed by Mr. Maurice Geflowski, sculptor. The chapel is lighted at night by means of starlights suspended from the roof, and in the portico and back approaches are lamps. In the rear of the chapel, upon the ground floor, are vestries, with lecture-room and library above; and arrangements have been made whereby a school-room can be attached to one side of the building. The chapel has at present but one small gallery immediately above the main entrance, but has been so constructed as to admit of side galleries. The ground is inclosed by a red sandstone wall, with Cheshire stone plinths and carved finials at the two principal gates, which will be lighted by four massive lamps. The entire building has been erected under the superintendence of Mr. William Laidlaw, clerk of the works.——The lecture-hall of the Trinity United Presbyterian Church, Devonshire-road, Claughton, has been opened for public worship. This hall is intended as a portion of a much larger edifice, which will consist of a church proper, with nave and transepts, and will be capable of accommodating from 800 to 1,000 persons. It is to be in the Gothic style, built of Stourton stone, and will have a tower and spire in the inner angle between the nave and a transept. The lecture-hall forms a semi-circular apse, being the north and south sides, broken by small transeptal gables filled with triplet windows, the apse itself being lighted with a range of fourteen single lights. The entrance porch, session-room, and vestry, are placed between the lecture-hall and the intended church, and over the session-room there will be erected a gallery passing into the lecture-hall. At present the session-room forms a large recess and platform, on which is placed the pulpit. The hall, which will at present and until the erection of the church be used as a place of worship, affords accommodation for about 300 persons. The roof of the building is open, showing the timbers up to the cross braces, where it is sealed. The whole of the joiners' work is stained and varnished. Underneath the hall there is accommodation for *soirées* and social gatherings. The building has been erected by Mr. Westmoreland, of Islington, Liverpool, from the designs furnished by Messrs. J. & W. Hay, architects.

GLASGOW ARCHITECTURAL ASSOCIATION.

On Thursday evening, 30th ult., a lecture was delivered to the members of the association, by Mr. Alexander Thomson, architect (of Messrs. A. & G. Thomson), patron of the association. Mr. Thomas Gildarde, architect, an honorary member, presided. The subject chosen for lecture was a critical analysis of the Classic and Mediæval styles, showing to what an extent the æsthetic element was inherent in each, and how far each was appropriate as the basis of modern design. The lecturer noticed some of the recent works of our popular art-critics, discriminating between what he considered true and what false teaching. In speaking of the requirements of modern times, he strongly advised the members not to use archaic forms in their studies, whether Classic or Gothic, and however much revered through association of ideas; but to exercise thought, and, from the position in which our present civilization places us, combined with the *true* principles of beauty, to form a new style of architecture, capable of keeping this art one of the *fine* arts, as well as a chronicle of the manners of our time.

The lecture was profusely illustrated. A vote of thanks to the lecturer, on the motion of Mr. J. M. Smith, was passed.

BRISTOL SOCIETY OF ARCHITECTS.

At the meeting held on the 4th instant, Mr. P. W. S. Miles in the chair, the council's report was read by the hon. secretary. This showed that under the new arrangements, the Society included 1 life member, 17 professors of architecture, 3 students, and 21 corresponding and honorary members.

"The principal alterations were, 1st, Extending the operations of the Society to the surrounding towns; 2nd, A new class of members, being gentlemen taking an interest in art; and 3rd, The adoption of summer excursions. Delegates from the Society attended at the first meeting of the Architectural Alliance held in London on 2nd of July last, and, in conjunction with delegates from the architectural societies of London, Scotland, Ireland, Birmingham, Liverpool, Manchester, and the Northern Association, framed rules which have since been accepted as a common basis of action by all the societies represented at that meeting. The council have almost unanimously adopted the scale of charges issued by the Royal Institute of British Architects until such time as the Alliance shall have decided upon this question. The excursions of the past year have been highly successful."

The president suggested the formation of a museum for the use of students.

RAILWAY MATTERS.

Another railway bridge has been burnt; a large wooden one on the Norwich side of the Ely station. The bridge burnt was situate about 200 yards north of the station, and carried the railway over a large sheet of water. The woodwork, which was very dry, and thickly coated with tar, fell an easy prey to the flames, which are supposed to have been occasioned by the dropping of some live coal upon it from a passing engine.——It has been resolved in the House of Lords, on the motion of Earl Granville, that with respect to the following railway bills,—the East London and Rotherhithe; the Grand Surrey and Commercial Docks; the Metropolitan, Tottenham, and Hampstead; the Rotherhithe; and the London (Victoria section), the orders be discharged, and the fees remitted; and that the said Bills be not further proceeded with during the present session.——A startling scheme has just been introduced to public notice by Mr. Alcock, the member for East Surrey. The projector proposes the formation of an overland railway from London to Calcutta, by way of Constantinople and Teheran. The whole distance is 6,100 miles, and the journey may be accomplished without interruption, except at the Straits of Dover and the Bosphorus. The time in which it may be accomplished would be twelve or fourteen days. Portions of the line, amounting to one-half of the whole, have already been constructed, so that

little more than 3,000 miles have to be laid down. But these 3,000 miles run over a vast region of deserts and mountains.

THE STAGE.

Royal Italian Opera House.—The representations here are proceeding brilliantly. Naudin has won his chief honours in the *Traviata*. The opera altogether was well played. On Thursday evening Mdlle. Adelina Patti was to make her first reappearance, choosing for it the *Sonnambula*.

The Princess's Theatre.—Mr. and Mrs. Charles Kean have returned to the scene of their former triumphs for a few nights, and, without the aid of splendid appliances, to which Mr. Kean's few opponents are fond of ascribing his popularity, are delighting crowded audiences. His Othello is a masterly performance, little known in London.

PARISH BOUNDARIES.

"BEATING THE BOUNDS."

THE day is approaching when the ancient custom is usually celebrated of "beating the bounds" (or boundaries).

In large parishes this time-honoured usage is heartily enjoyed by those who take part in it; and the quickly varied scenes arising from traversing lanes and fields, and passing over water and through streets, alleys, roads, gardens, factories, works, houses, public and private, inside and outside, over and under, are beyond what a non-"bound-beater" can perhaps well imagine.

In these utilitarian days, however, there is a growing tendency to apply the test of *cui bono?* to things antique, middle-aged, and modern.

The custom in question appears to be an immemorial one. It has doubtless, in other days, been of considerable local value.

Is it, however, the most efficient and most convenient machinery for securing the limits of a parish in the year 1863?

The theory is, that a parish shall be completely and faithfully perambulated; its land-marks, wood, iron, or stone ascertained to be duly placed and in good repair, and every encroachment resisted.

Holy Thursday is the day usually appointed for the procession; and in practice I have found that the walking of the boundaries is not an arbitrary performance, but one that takes place as far as expediency prompts. For example: if houses or premises belonging to influential men in the district have been built upon the boundary, the parochial host will make a deviation by passing through an adjoining street or house, simply sending a school-boy through the house which has encroached, although in theory all should have passed through.

With the dwellings of humbler pretensions, "principle" is vindicated; and I have known the pioneers, consisting of half-a-dozen rough and ready hands with saws, pickaxes, and crowbars, called forward to make a passage through bricks and boards, through which the authorities and their followers have marched.

Frequently it is only a garden which trenches on the boundary, and it is of course impossible for a number of people in holiday spirit and in haste to run through a garden, flower or market, without doing some little damage. In small places a passage through is insisted upon. In large ones there is generally a compromise: walls are scaled, roofs climbed, and no force used.

It would thus appear that the greater the trespass on the boundary-wall the greater the impunity which results.

It may, however, be asked, is the boundary-line a real one, consisting of so many feet of earth actually belonging to the parish, or is it a mere mathematical line? At all events, the theory of a clearly-defined walking boundary has long since been exploded. From parochial negligence or the impossibility of maintaining the boundaries houses have been erected in utter defiance of them.

The parochial system in these days is a very different thing to what it was even a century since. People are heedless nowadays as to whether their districts are allocated to St. James, St. John, or All Hallows; and the only advantage in living in certain parishes is, that, owing to the inequalities of the poor-rates, the taxes are somewhat lower.

Whilst, however, the parish system exists, it should unquestionably be preserved in its integrity; but is beating the bounds the system for effecting this most consonant with our present status? In occupying a house on the boundary, should a man have to submit to a periodical invasion by headboroughs, charity children, *cum multis aliis?* As the parish allowed the house to be built, did it not recognise and sanction the right to erect it?

As no man can build a house without it being a matter well known in the neighbourhood, should not exception be taken to its encroachments before completion? Can no better plan be devised than the present inconvenient one? Railways, clubs, banking-houses, docks, museums, &c., cannot be knocked about: why then should small workshops, dwelling-houses, gardens, &c., suffer?

What is no one's special business to look after, invariably meets with neglect. Boundary-marks are frequently removed by the mischievous and the interested. Old plans are continually being affected by the rapid increase in new buildings. The old residents, whose evidence is so frequently relied upon as to what was done on the last boundary day, are constantly "sleeping with their fathers." Some consideration of the matter may perhaps lead to the suggestion of a remedy for the present defective system. P. M. H.

TENDERS FOR THE SURREY COUNTY HOSPITAL.

SIR,—Can you give us any information as to the tenders delivered some time since for the Surrey County Hospital. It is reported that the estimates range from 12,000*l.* to 17,000*l.*, while the architect's own estimate for his design was 7,500*l.* Is this just to the other competitors? A. & B.

CASES UNDER METROPOLITAN BUILDING ACT.

WOODEN BUILDINGS.

ON the 22nd ult., the District Surveyor of Camberwell summoned Mr. Hood, a photographer, before the magistrate of the Lambeth police-court, for having erected at the back of his house a building of wood and glass, contrary to the Act, which requires all buildings to be enclosed "with walls of brick, stone, or other incombustible materials."

Mr. Hood urged, that as he had attached wheels to this building, so that it could be removed from one place to another, he considered the erection exempt from the operation of the Act. The magistrate, however, took a different view of the matter, and made an order for Mr. Hood to amend the irregularity complained of.

ROTHERHAM WATER BILL.

SIR,—I am sure no one would have a greater aversion than myself to charging any one unjustly; and if I have been the means of giving publicity to what is not true, I trust that when I say I extremely regret it, Mr. Hawksley will accept this as my apology.

But let us look at the matter a little further. Had Mr. Hawksley, in his reply, said that he did not mention Worksop in his evidence on the Rotherham Water Bill, I should have been bound to believe him; but when the proprietor of the *Sheffield Independent* had his report "from a London reporter specially engaged for the purpose," I do not think that it is surprising that I should expect the report to be correct. I read various reports in the respectable journals of the day, and always considered they were to be relied upon: if, however, the truth of such reports is to be inquired into, I conceive their readers will greatly diminish.

ROBERT WHITE.

Books Received.

ENGINEERS' POCKET-BOOKS.

Pocket-Book of Useful Formulæ and Memoranda for Civil and Mechanical Engineers, by GUILFORD L. MOLESWORTH, C.E. (Spon, London). This is really a *pocket*-book, and a most useful and valuable one of its kind. Many of the formulæ are, of course, not original; but the whole is exceedingly well condensed, and the little volume contains numerous formulæ and memoranda on a great variety of subjects. Mr. Molesworth, we may remark, is the principal resident engineer of the Ceylon Railway.

The Engineers' Pocket Remembrancer. An Epitome of Data, Rules, and Formulæ, applicable to Civil, Mechanical, Marine, Hydraulic, Lighthouse, Telegraphic, Railway, and Gas Engineering, Surveying, &c. By FRANCIS CAMPIN, C.E. London: Atchley & Co. This is not quite so small and handy a book for the pocket, and assumes the shape of an ordinary volume: it is better suited for use in offices, and contains many useful tables. The author is the president of the Civil and Mechanical Engineers' Society.

VARIORUM.

"The Australian Builders' Price-book." By C. Mayes, C.E., and architect. Melbourne: Sands & McDougall. 1862. This price-book appears to be esteemed by professional authorities in the Colonies.——"The Shilling Guide to the London Charities, for 1863." By Herbert Fry. London: Hardwicke. In alphabetical order and running columns, this Guide shows the name, date of foundation, address, objects, and annual incomes, number of people benefited by, mode of application to, and chief offices of, the London charities.——"The Science of Ship-building considered in its relations to the Laws of Nature;" illustrated. By B. Bowlby Willson, of Canada. London: Potter, Poultry. 1863;—a suggestive treatise by one who seems to have thought for himself on the subject, but without much mathematical lore.——"Holmes's Magneto-electric Light, as applicable to Light-houses. We have here an account prepared, apparently, at the instance of the proprietors, of the very brilliant and promising light already in use at the Dungeness light-house, and which has Professor Faraday's approval as one which "promises many improvements during its further development." The descriptive and other matter is accompanied by an engraved view of Holmes's interesting magneto-electric light apparatus.——The principal article in the present number of the *Gentleman's Magazine* is an illustrated one on "Irish Round Towers."——"London Society" has a large number of capital illustrations, as usual, including a portrait of the "father" of the Academy,—Mulready (made R.A. in 1816),—and a very good notice accompanying it.——The present *Quarterly* is a number of varied interest: Colenso, and Salmon; India, America, Kinglake, and sensational novels are the subjects treated of, with the leanings that belong to it. It is itself, as it says of a sensational novel,—

"About peas-pudding and porridge, about the Spartans,
About the war, about the pilchard fishery,
About the state of things in general,
About short weights and measures in the market,
About all things and persons whatsoever."

——Appleby's "Illustrated Handbook and Price Current of Machinery and Ironwork" (Spon, Bucklersbury), is a trade catalogue, and something more. Contractors, engineers, and others will find it useful.

Miscellanea.

THE MARRIAGES OF ENGLISH KINGS AND QUEENS.—The correspondent who sent us a list, printed at p. 259, *ante*, made two or three slips, which call for correction. Thus: Edward I.'s second wife was Margaret, daughter of Philip III. of France, and not Isabella; and Edward II. married Isabella, daughter of Philip IV., of France.

THE ROYAL SOCIETY.—On Saturday evening last Burlington House was thrown open for a second *conversazione*, held by General Sabine as President. The arrival of visitors continued till a late hour, the latest being those who quitted the table of the Royal Academy for the *soirée*. About twenty minutes to eleven their Royal Highnesses the Prince of Wales and the Prince Louis of Hesse arrived, and were received at the foot of the stairs by the President and secretaries. The attendance was numerous.

ARTS OF JAPAN.—At the Royal Institution, on Friday, May 1, a lecture was delivered by Mr. John Leighton, F.S.A., upon "The Arts of Japan; illustrated by native examples." Mr. Leighton, having touched upon the people and their isolation, contrasted the Chinese and Japanese, awarding the palm to the latter, who, though seeking seclusion, seem alive to progress and ready to avail themselves of European discovery. After touching upon the architecture, sculpture, and arts of drawing and design, he proceeded to sum up the evidence, noting where they were our superiors and where deficient; the last inheritance of the European school—powerful use of light and shade—being wanting, though form, colour, and perspective are most effectively used in Japan.

LIVERPOOL ARCHITECTURAL SOCIETY.—The meeting, on Wednesday evening, 22nd ult., was presided over by Mr. Weightman. Mr. Kilpin gave notice of motion to the effect that the report of the proceedings of each preceding meeting should be read at the general meeting, as he thought the adoption of such a system would enable members who had not attended the previous meeting to make themselves acquainted with the opinions and views expressed thereat; while those who had attended would have their memories refreshed. Mr. J. A. Picton suggested that, in future, the Society should make excursions to different places for the purpose of deriving information as to architecture and archæology, and it was understood that the subject would be taken into consideration. A paper by Mr. P. H. Horner was read, "On some of the Analogies of Architecture." A discussion followed.

CONSECRATION OF A ROMAN CATHOLIC CHURCH IN CAMBERWELL.—A newly-erected Roman Catholic church, in the Wyndham-road, Camberwell, has been consecrated by the Roman Catholic Bishop of Southwark. The edifice is styled "The Church of the Sacred Heart," and contains sittings for about 700 or 800 persons.

BERKS.—The mansion of Sir C. D. Crosley, Sunningdale, Berks, having undergone extensive repairs and decorations, under the superintendence of Mr. Alfred Smith, by Messrs. Holland & Hannen, builders, the men employed were regaled with a dinner on Friday evening, the 1st inst.; Mr. Thomas Sneezum presiding as chairman.

ACCIDENTS.—About twenty *employés* of Messrs. Houlden & Parker, cabinet-makers, of Church-street, Liverpool, were at tea the other evening, when the flooring of the room in which they were sitting fell in, the whole of those present, as well as the *débris* of the floor, going through the one below it. As the shop is situate in one of the principal thoroughfares of the town, the crash and the screams of the people injured by the accident created great consternation. The cause of the accident is not positively known, but the building will have to be pulled down.——A house in Burley-terrace, Leeds, has been set on fire by the overheating of a flue in an adjoining house.

ASTRONOMICAL CALCULATIONS. — Among the communications made at the last meeting of the Astronomical Society, was one from Mr. Stone, principal assistant at the Royal Observatory, Greenwich. Mr. Stone had completed the calculations of the mean horizontal parallax of the sun, as deduced from observations made at Greenwich on the planet Mars at his recent opposition, compared with other similar observations made in Australia. The result is that the heretofore received mean distance of the earth from the sun must be diminished by about three millions of miles! What a corollary this is on the dogmatical and supercilious assurance with which some astronomers lay down the law to lay thinkers on the subject of astronomical science!

TURBINE.—An improved turbine has been provisionally specified by Professor Charles Fink, of Berlin, which is constructed with a fixed outer ring of adjustible direction vanes, contained between two parallel horizontal annular surfaces, between which adjustible vanes the actuating water passes, and is directed by them into and through a series of buckets or openings formed with or attached to a ring or wheel attached to a shaft or spindle, and free to revolve within the ring first mentioned. The actuating water, after passing through the buckets of the inner ring or wheel (and thereby giving a rotary motion to the same, and to the shaft or spindle upon which it is fixed), passes downward through a suitably formed pipe or tube, from which it is ultimately led away in any convenient manner. The necessary movement for adjusting the vanes to any required angle may be imparted to the annular ring by levers or other convenient or suitable means.

THE FINE ARTS IN LIVERPOOL: ONE EXHIBITION.—We are glad to learn, from the *Albion*, that the negotiations between the gentlemen interested in Art for the establishment of *one* exhibition in Liverpool have been successful. During the last five years there have been two exhibitions —one in Bold-street, upheld by the Society of Fine Arts, and the other in Post-office-place, managed by artists forming the Liverpool Academy. The Liverpool Academy, now established for many years in Liverpool, resolved a few months ago to cease holding an annual exhibition in their rooms, and to withdraw from a contest which they had not the means to carry on. Upon their giving up these rooms, several gentlemen who had shown an interest in the matter agreed to take the lease, and so relieve the artists of their responsibility. But, to prevent any impression that this was intended as a new opposition, these gentlemen at once made proposals for a union of the friends of art in the town, and after prolonged negotiations have brought the matter to a successful termination. The Liverpool Institution of the Fine Arts is the title of the amalgamated societies. The exhibitions will in future be held in Post-office-place. Considerable misapprehension has existed regarding the negotiations which have led to the generally-desired union of the Liverpool Academy and the Society of Fine Arts. We understand that the advances which have resulted in so satisfactory an arrangement emanated from the last-named society, and not from the Academy.

A NEW FIRM: "SEMPER FIDELIS."—Miss Faithfull and her company of the Victoria Press have taken the arms of a lion on the alert—looking for business, perhaps, says one—with the appropriate motto, "Fidelis et Firmus,"—"Faithfull & Co.," we presume.

THE DRINKING-FOUNTAIN MOVEMENT.—The committee at Merthyr for conducting the Prince of Wales's marriage festivities, after paying all claims, find themselves in possession of a large surplus, and have resolved to expend it in the erection of a public drinking-fountain. They have selected a design by the Coalbrookdale Company, and it will be erected in front of St. David's Church, and bear an appropriate inscription commemorative of the auspicious event.

BOOT-BRUSHING MACHINE.—An engine-man, Mr. Joseph Polson, Edinburgh, has invented a machine for blacking and brushing boots and shoes. The brushes, which are hollowed to suit the rounded shape of the boot or shoe, move horizontally with great rapidity, and give about 300 strokes per minute, being five or six times the number produced by a strong hand and arm. It is to be hoped the strokes will steer clear of the corny toe if the boot proprietor put his foot in it for the occasion.

WOOD-LICE IN CHURCHES.—A correspondent asks for information as to means of getting rid of wood-lice in a church. Various recipes for destroying insects of different kinds have been given in our columns; but we do not think "Keating's Insect-destroying Powder" has been mentioned. We have found it effectual in destroying insects in a garden, and it is said to be equally useful in clearing away such pests as fleas, bugs, &c.: it might, therefore, be sprinkled about the resorts of the wood-lice; and we dare say that in a short time they may thus be got rid of. We should like to know the result. This powder (unlike Keating's Vermin-killing Powder) is said to be "harmless to animals," although destructive to all sorts of insects. For flying and some other insects it is used as a fumigant, sprinkled on red-hot coals or wood, or set fire to after being twisted up in a piece of paper.

A WORKMAN'S TOOLS DISTRAINED ON ANOTHER'S PREMISES.—*Benham* v. *Weller*.—The plaintiff in this case had been working on defendant's premises, and had put his tools down and left the shed in which he had been working, intending to return almost immediately. In the mean time the tools were seized. The jury that tried the case at Aylesbury gave a verdict for the defendant. At the Court of Queen's Bench on Monday, on the application to set aside this verdict, a rule was refused, on the ground that the rule of the law which privileged tools of trade from distress only applied where they were in actual use and in actual mutual possession, because the reason of the rule was the danger of personal violence and breach of the peace. No doubt, if the man had merely laid the tool down before him, and it was seized before he could take it up again, the case might be within the rule; but here he had left the place, and, therefore, the reason of the rule did not apply, and there was nothing else to distrain.

NEW BRIDGES OVER THE THAMES.—The Committee of the House of Lords, of which Lord Taunton is chairman, with consideration of the proposed Albert Bridge across the Thames, decided;—"That the committee are unwilling, without a more pressing necessity than has been shown in the case, to sanction the erection of a new proprietary bridge over the Thames, with tolls in perpetuity; and they are further of opinion that it is desirable and of urgent importance that the whole question of bridge accommodation between the two sides of the river, within the metropolitan district, should receive the early consideration of some public authority, specially with the object of providing for the abolition of all tolls on them, as far as possible. For these reasons the committee were of opinion that it was not expedient to proceed with the Bill, which is, consequently, thrown out." The case of the Putney and Fulham new bridge was considered. It is proposed to construct the bridge from Putney to Fulham a little to the eastward of the existing Putney Bridge, on the suspension principle, with three spans. The centre of the bridge is to have a headway of not less than 21 feet above Trinity high-water mark, and at the abutments of 8 feet, with a pier and landing-stage. The committee, after taking evidence corroborative of the objects of the Bill, agreed to pass to the subject of provisoes giving compensation to the proprietors of old Putney Bridge, to be assessed by arbitration or a jury.

SEWERAGE OF BUXTON.—Mr. E. W. Wilmot, the chairman of the local board, has resigned his seat, the board having decided, almost unanimously, that, for the future, no sewers of any sort shall be put in at the public cost,—a decision, he considers, alike unjust and impolitic.

THE LATE MR. W. HARRIS, ARCHITECT.—We have to mention the death, on the 1st of April, of Mr. William Harris, architect, of 55, Park-street, Grosvenor-square, sixty-six years of age. Mr. Harris was a pupil of the late A. Welby Pugin, and gave the designs for Queen's-gate-terrace, Gore-road, and other private buildings.

A TIMBER-FELLING MACHINE.—To those desirous of raising a few thousands by their timber, it will be interesting to be informed that a talented Scotchman has lightened the difficulty as to time by inventing a machine as portable as a wheel-barrow, which, it is said, is capable of cutting down as much wood in one day as two men could accomplish in a week. It is easily worked. The inventor, Mr. M'Glashan, resides at Dun Alaister, Pitlochie.

NEW BELLS. — Among recent bell-foundry doings, it may be mentioned that the following have been turned out by Messrs. Warner & Sons. In the last two months they have cast two "memorial bells." 1st. A 20-inch bell, bearing a medallion portrait of the late Prince Consort. It was cast as an addition to the peal for the Rev. S. M. Ware, Helenswick Rectory, Bromyard. (This is the second they have cast in memory of the late Prince). 2nd. A bell of about 7 cwt. for Newfoundland, with the following inscription:—

"In memory of the great seal haul,
A.D. 1862.
St. Peter's, Twillingate.
V. R.
25."

3rd. Three bells supplied to the Grey Friars Church, Reading. 4th. The bell at St. Philip's Church, Kennington-road. 5th. The bell at the New Agar Town Church. 6th. A new peal of three bells hung at the church at Foot's Cray.

CARLTON HOUSE TERRACE, LONDON.—Mr. Locke (in the House of Commons) asked the Chief Commissioner of Works whether he intended to complete Carlton House-terrace upon the vacant ground where the riding-school stood; and, also, whether he would propose, during the present session, the continuation of the carriage-way from the Mall in St. James's Park to Charing-cross. Sir H. Verney said, before the hon. gentleman answered the question he wished to inquire whether it was intended to continue the road from the east end of Carlton House-terrace to the northern extremity of Spring-gardens, the space for which was vacant by the taking down of the riding-school? Mr. Cowper said Carlton House-terrace would be continued on the ground that was now vacant. Building leases on that ground had been granted by the Crown. It was not his intention, during the present session, to propose the continuation of the carriage-way from the Mall in St. James's Park to Charing-cross. Such an improvement was recommended by a committee of the House in 1856, but it had made no recommendation as to where the funds were to come from.

THE CAMDEN SOCIETY.—The anniversary meeting af the Camden Society was held on Saturday, May 2, being the birthday of its patron the great historian, when the Marquess of Bristol took the chair, and the principal resolutions were moved and seconded by Mr. Tite, M.P., Mr. George Dodd, F.S.A., Mr. Durrant Cooper, and other influential members. The annual report is occupied principally with a statement of the successful result of the Society's efforts for opening the Register of Wills in Doctors' Commons for the use of literary inquirers, which has been conceded by Sir Cresswell Cresswell in respect to all wills of a date anterior to the year 1700. With the view of making generally known the importance of this new source of literary and historical information, the Camden Society has issued a volume of "Wills from Doctors' Commons." The selection belongs to a great variety of memorable characters:—members of the Royal Family; eminent prelates and noblemen; persons who played important parts during the great civil war; well-known poets, painters, and musicians; divines and philosophers; and, lastly, the wills of some distinguished ladies. The Society has issued for the subscription of 1862 63, two other books, viz.:—Lists of Foreign Protestants and Aliens resident in England, 1618—1688, from returns in the State Paper Office, edited by Mr. W. Durrant Cooper, F.S.A.; and the Trevelyan Papers, Part II., from 1551 to 1643, edited by Mr. J. Payne Collier, from the Muniments of the Trevelyan Family.

ST. MARTIN'S SCHOOL OF ART.—The seventh annual *conversazione* of this school (Castle-street, Long-acre), will be held on Thursday evening, the 14th instant.

THE CARDIFF ASSOCIATION OF MASTER BUILDERS.—About eight years since, during the time of a strike of masons and other workmen, an association bearing this name was formed at Cardiff. Since then but few circumstances have occurred to call for combination, and the association has somewhat languished. Circumstances, however, have recently taken place which induced several of the members to resuscitate the society; and as one of the best means of doing so, it was purposed to extend an invitation to all the masters connected with building interests to a social dinner. This dinner has just been held at the Queen's Hotel, when a large assembly of master builders met on the occasion. Mr. C. Pearson presided; and the two vice-chairmen were Mr. Daniel Jones and Mr. W. P. James.

RAGS AND PAPER. — A return shows that within the last seven years the imports of rags and paper in the United Kingdom have been as follows:—In 1856, 10,287 tons of rags, 15,767 cwts. of foreign paper; 1857, 12,206 tons of rags, 12,057 cwts. of paper; 1858, 11,394 tons of rags, 11,701 cwts. of paper; 1859, 14,621 tons of rags, 18,338 cwts. of paper; 1860, 16,154 tons of rags, 45,019 cwts. of paper; 1861, 20,486 tons of rags, 94,355 cwts. of paper; 1862, 23,943 tons of rags, 193,639 cwts. of paper. Thus the imports of rags have more than doubled since 1856, while the imports of foreign paper have increased since that period by 177,872 cwts. The exports of British paper in 1858 were 106,557 cwts.; 1859, 126,454; 1860, 112,514; 1861, 91,958; 1862, 129,440. These facts bear out the anticipations of Mr. Gladstone, which were met with much ridicule and opposition three years since.

THE THREATENED LUDGATE-HILL VIADUCT.—It is so far satisfactory to know that the London, Chatham, and Dover Railway Company appear to have themselves abandoned their scheme for the proposed viaduct; but they have only relinquished their powers for the construction of this portion of their original scheme in favour of a new company formed under the title of the Ludgate Station and Junction Railway Company, which, so far as regards the original company, betrays their anxiety to be rid of the odious task of disfiguring one of the most central thoroughfares in London. It is to be hoped the new company will *not* be empowered to carry out the viaduct in question; nor that Parliament will grant the extension of time asked for by the original company beyond next August for carrying out this new form of their project. There is no absolute necessity for a viaduct, and we do not see why it should be carried out at all, so long as an underground line below Ludgate-hill is possible, in order to complete the connexion of the present underground line with the south. The Ludgate-hill inhabitants and proprietors, we are glad to observe, are stirring in this matter, and a committee have addressed the individual members of the House of Lords on the subject. The City Court of Sewers appear to think the viaduct must be permitted.

YARMOUTH SCHOOL OF ART.—There was a very crowded attendance at the Town-hall to witness the distribution of prizes awarded at the last examination to the students of this and various other public schools. About 130 prizes had been awarded, and amongst them were eight medals and seven books, the latter being received by those who had been successful in obtaining medals in previous years. At the last distribution, held about six months ago, Dr. Stephenson promised to give a series of lectures on anatomy and physiology, and to present a silver medal, value two guineas, to the student who at the termination of the course would draw up the best outline of the subjects treated upon. The lectures, eight in number, were duly delivered, and were well attended. Mr. Barrett, master of the charity school, was successful in winning the medal. The mayor occupied the chair, and in opening the proceedings, he observed that the hon. secretary (Mr. Harmer) had put into his hands a paper by which he saw that a larger number of pupils had passed at the last examination, both in the school of art and in the public schools, than at any period since the establishment of the institution in this town. There were not, however, so many prizes this year, because the standard of merit necessary to obtain them had been raised. The standard was so low that almost every pupil obtained a prize.

PUBLIC WORKS FOR THE UNEMPLOYED.—Mr. Rawlinson has been appointed by the Government to proceed to the cotton districts, for the purpose of reporting to the Government on the one hand, and of communicating with the local authorities on the other, as to the needs and capabilities of those districts in the way of works of public improvement, and the possibility of employing the able-bodied cotton workers on such works, at fair wages. He has been over a portion of the district,—Stockport, Oldham, and Blackburn,—and works will be set out at once if the money necessary can be obtained on easy terms—say 3½ per cent.—and the redemption fund be deferred for three years. Government may lend one or more millions on safe security, so as to have every able-bodied industrious man set to useful and beneficial work. The men can and will work for fair wages; and the corporations and local boards will find the work if the money be obtainable on the terms named. A short Act will be required.

IRON AS A TONIC IN THE VEGETABLE CREATION.—A curious discovery is alleged to have just been made regarding the influence of iron on vegetation. Preparations of iron are used in the animal world as a medicine where the blood is poor in red particles. The pale cheeks of the invalid often regain their bloom under the influence of such tonics. It is much the same, it appears, with plants. On the chalky soils of France and England, where there is an absence of iron, vegetation has a sere and blanched appearance. This is entirely removed, it is said, by the application of a solution of sulphate of iron. Haricot beans watered with this substance acquired an additional weight of sixty per cent.! [How would a few doses of cod-liver oil agree with them?] Mulberries, peaches, pears, vines, and wheat derive advantages from the same treatment. It is expected that the salts of iron will be found as beneficial in farming as in horticulture, but the experiments are as yet very incomplete. In the cultivation of clover, however, wonderful advantages are declared to have been gained. The material is cheap, and the quantity applied is small.

TENDERS.

THE *Engineer*, of August 15th, in its description of Benson's Great Clock, says:—"As engineers we can say that it really approaches much nearer the perfection of mechanism than any other example of clockwork we have yet seen, on anything like the same large scale." Benson's new showrooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watch making, with descriptions and prices. It acts as a guide in the purchase of a clock or watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson, received a Prize Medal and honourable mention. 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

IN THE COUNTY OF SURREY.—Eight miles only from the Royal Exchange, and seven from the West end.—Very valuable Freehold Estate, known as Biggin Farm, comprising nearly 100 acres of land with Residence, Farm Buildings, Stabling, Loose Boxes, &c. having important frontages of between 6,000 and 7,000 feet to capital main roads, close to the Streatham common Station on the main line of the Brighton Railway, and one mile and a quarter from the Streatham Station of the London-bridge, Crystal Palace, and Victoria Railways; lying in the direct route of the projected Wimbledon and Streatham, London, Chatham, and Dover (Streatham, &c Extension), and London, Brighton, and South Coast (South London, &c Junctions) Railways, notices of claims having already been served, offering advantages for building purposes rarely to be met with in such contiguity to London.

MESSRS. WEATHERALL & GREEN have been honoured with instructions from the Proprietor to offer for SALE by AUCTION, at the MART, London, on THURSDAY, MAY 14, at ONE o'clock (unless previously disposed of by private contract), the above important and very valuable FREEHOLD ESTATE, particulars of which, with plans and conditions of sale, are now ready, and may be obtained of JAMES WRIGHT, Esq., Solicitor, No. 8, New-inn, Strand; and of Messrs. WEATHERALL & GREEN, Surveyors, Land Agents, and Auctioneers, 32, Chancery lane W.C.

TENTH SALE of SURPLUS PROPERTY belonging to the North London Railway Company: comprising 14 plots of valuable Freehold Building Land, and three Freehold Residences, situate at Homerton and Lower Homerton, in the parish of St. John, Hackney

BRASS SASH-BARS, STALL-BOARD PLATES, &c. &c.

15, Gate-street, Lincoln's Inn Fields, W.C. AND 4, MARKET STREET, MANCHESTER.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of Silicates of Soda and Potash, Aluminates of Soda and Potash,

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING STONE, CEMENT, STUCCO, &C.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in London has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

CROGGON and COMPANY,

Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING, and INODOROUS FELT, For Damp Walls, and Lining Iron Houses. DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union street, Borough, London; and of all respectable Ironmongers, Builders, &c.

TO ARCHITECTS, &c.

A PRACTICAL CLERK of WORKS is open to a RE-ENGAGEMENT. First-class testimonials.—Address, M. N. 21, Alfred-street, Bow-road, E.

TO BUILDERS AND CARPENTERS.

A BUILDER'S SON, aged 23, is in WANT of a SITUATION as an ASSISTANT to a BUILDER, or FOREMAN of CARPENTERS. Can prepare Plans, and set out work, &c. Good references, moderate salary.—Address, W. D. 301, City-road, E.C.

Also, superior WHITE and RED FACING BRICKS.—Apply as above, or to W. WRIGHT, Brickmaker, Dedham, Essex.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE OF WIGHT. Second Testimonial
"March 10th, 1853.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many hundreds and other persons have been using it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

CARSON'S
ORIGINAL ANTI-CORROSION PAINT.
Patronised by
THE BRITISH GOVERNMENT, THE RUSSIAN GOVERNMENT, H.R.H. THE PRINCE CONSORT, MOST OF THE NOBILITY & GENTRY, RAILWAY & CANAL COMPANIES. COLLIERIES, IRONMASTERS, &c.
It is extensively used at home and abroad for all kinds of
OUT-DOOR WORK,
And has been proved, after a practical test of 70 years, to surpass any other Paint. It is applicable to WOODEN HOUSES, FARM and other OUTBUILDINGS, AGRICULTURAL IMPLEMENTS, MACHINES, CONSERVATORIES, PARK FENCING, GATES, &c., IRON ROOFING, BRIDGES, HURDLING, and every description of IRONWORK; while for
PUBLIC EDIFICES, MANSIONS, VILLA RESIDENCES,
And every kind of Brick, Stone, Compo, &c. it is unrivalled, presenting the appearance of fine cut stone.
The Anti-Corrosion is lower in price and lasts twice as long as the best White Lead.
The Anti-Corrosion is a Powder, sold in all colours, and will keep any length of time.
OIL, TURPENTINE, AND BRUSHES.

TERRA-COTTA WORKS,
BLACKFRIARS ROAD,
LONDON, S.
MARK H. BLANCHARD & CO.
Successors to COADES.

1862.

Original Works established 1769. Terra-Cotta Manufacturers to her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Department of Science and Art, South Kensington, and the Recipient of the Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

A beautiful variety of Statues, Statuettes, Vases, Tazzæ, Fountains, Flower Pots, Balustrade Terminals, and other adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

PRIZE MEDAL, 1862.

Nine tenths of the purchase money may remain on mortgage or contract at five per cent, to be paid in nine years, by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained at the Auction, 14, Moorgate-street, London, E.C. and of the Auctioneer, 14, Moorgate-street, E.C.; of Mr. JOHNSON, on the Estate; of Mr. R. GREEN, Richard-street, Woolwich; and at the Place of Sale.

POSTPONEMENT OF SALE. WIMBLEDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM has to announce that the SALE of LAND, at the AUCTION MART, London, on MONDAY, May 18th, 1863, at TWELVE for ONE o'clock, is POSTPONED until further notice.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Mansion, House and Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, Bartholomew lane, City, on MONDAY, MAY 25, at TWELVE for ONE o'clock, a VERY IMPORTANT LOT, being the PORTION of the late ESTATE, late the property of the Hon. East India Company, consisting of the noble mansion, built in the most substantial manner, and in a very complete order, formerly an institution; containing on the second floor eleven bed-rooms, dressing-room, work room, store room, and water closet; on the first floor, a lofty drawing room, 30 feet by 20 feet, with two communicating rooms, and two other rooms; on the ground floor, a noble entrance hall, dining-room, attendants library, four sitting rooms, two store rooms, wide oak staircases on the basement, servants' hall, kitchen, scullery, larder, housekeeper's room, butler's pantry, cellars, &c. The steward's house contains, on the first floor, four bed rooms; on the ground floor, two parlours and sitting room on the basement, kitchen, scullery, and offices, and garden. Also eligible Freehold Building Land, with frontages to the Upper Addiscombe-road. The lot on which the lodge stands is now let at £10 per annum for business purposes, and the remaining lots are adapted for good Villa Residences. The property is within ten minutes' walk of the New Addiscombe Station, and within half an hour's ride from West Croydon, and when the Addiscombe Railway is completed the Station will be on the Estate; thus bringing the property in constant communication with the City and West end of London. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained about ten days before the sale of Mr. PALCE, South Lodge, Addiscombe; of the principal Inns in the neighbourhood; of Messrs RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

EAST HAM, ESSEX.—VALUABLE FREEHOLD BUILDING LAND.

ROYAL HORTICULTURAL SOCIETY.
10TH JUNE, 1863.

CEREMONIAL TO BE OBSERVED AT UNCOVERING the MEMORIAL of the EXHIBITION of 1851, and STATUE of H.R.H the PRINCE CONSORT, in the presence of their RR.HH.'s the PRINCE and PRINCESS OF WALES and other Members of the Royal Family

The Guests invited to take part in the procession will assemble at the West Dome of the Exhibition Building.

While assembling Military Bands will play.

The Royal party will be received at the West Dome entrance by the Executive Committee of the Memorial Committee.

Their RR.HH.'s will proceed down the Nave to a Balcony over the Southern Entrance of the Horticultural Gardens, and their arrival will be announced by a flourish of trumpets. "God Save the Queen" will be played by three Military Bands united in the Ante-Garden.

The Council of the Horticultural Society will present an Address.

Military Bands will again play.

After which the Memorial Committee will read an Address.

H.R.H. the Prince of Wales will order the UNCOVERING OF THE MEMORIAL, which will be announced by a flourish of trumpets and a salute of Artillery, after which Military Music will be performed and the Fountains will play.

The Royal Party, headed by the Procession, will then walk round the Gardens, stopping at various points to see the Memorial and the Garden.

The route will be marked by barriers and bunters; and it is requested that during the Procession the spectators will remain stationary.

In the event of rain, the line of Procession will keep under the cover of the Arcades.

The Exhibition Building will be thrown open to the Visitors.

GEORGE GODWIN, Hon. Sec. Memorial Committee.
W. W. SAUNDERS, Hon. Sec. of the Horticultural.

ROYAL HORTICULTURAL SOCIETY.

COMPETITIONS.

TO GLASS STAINERS.—ABBEY CHURCH, BATH.—Persons willing to give DESIGNS and TENDERS for a MEMORIAL WINDOW to the late Bishop Carr, to be placed at the east end of the choir of Abbey Church, are requested to forward designs and estimates (including carriage and fixing) to Mr. RICHARD STOTHERT, Hay Hill House, Bath, before the 1st of JULY next. The size of the window is 20 feet wide by 50 in height, including the mullions and tracery. The design not to include any human figures, but in other respects is left open to the suggestion of the artist. No pledge is given to accept the lowest or any tender.—For further particulars, apply to Mr. RICHARD STOTHERT.

ROYAL MASONIC INSTITUTION for BOYS, Lordship-lane, Wood Green, Tottenham.

Patron—Her Most Gracious Majesty the Queen.

President.—The Right Hon. the Earl of Zetland, K.T., M.W.G.M.

PLANS and DESIGNS for a projected NEW BUILDING for One Hundred Boys.—The House Committee of this Institution have in contemplation to erect a new building on their own freehold property situate as above; but before coming to a final decision on the subject, are desirous of having placed before them ample materials for the guidance of their judgment. They therefore offer to such architects as may think proper to furnish plans, three premiums of £50 and 30 respectively, for PLANS and DESIGNS for a BUILDING, with every necessary accommodation for 100 Boys, with the requisite educational and domestic staff. The Drawings of the three selected and premiated Designs to be the absolute property of the Committee. The Committee will not bind themselves to adopt either design, but will be at liberty to modify either premiated Design in any way they may think proper, to employ any architect they may select, and to erect the Building in sections or otherwise as they may think best. The sum proposed to be expended is £8,000. The Drawings to be sent into the Office addressed to the Committee, care of the Secretary, not later than TUESDAY, the 7th of JULY next. Full instructions and every information will be given on application to the Secretary as under, on and after THURSDAY, the 4th instant.

FREDERICK FINCKS, Secretary
Office, 16a, Great Queen street, W.C. May 6th, 1863.

WEDGWOOD MEMORIAL INSTITUTE, Burslem.—The Committee for Erecting the above have received designs of 37 Artists from Mr. Beresford Hope, Mr. J. K. Heathcote, Mr. J. Edge, and the Rev. Dr. Armstrong, as PRIZES for the best DESIGNS of all Architect or other Artist for the Treatment and Decoration of the FAÇADE of the INSTITUTE, in all or any kind of ceramic ware, coloured bricks, mosaics, and terra cotta, as structural features of an architectural composition, with the view of encouraging a higher and more artistic style than is usually applied to the decoration of buildings. The Competitive Designs are to be sent in to Mr. Beresford Hope, Mr. Digby Wyatt, and Mr. J. C. Robinson, Judges. The Designs must be sent in on or before NOVEMBER 2, 1863, and will, after adjudication, be all exhibited, both at Burslem and in the Architectural Exhibition (London), 1864.—Particulars, with block elevation, may be obtained by letter (enclosing a postage stamp) from the SECRETARY of the Architectural Union Company, 9, Conduit-street, W.; and from W. WOODALL, Esq. Longport, Burslem, Staffordshire.

TO ENGINEERS, &c.—WATERWORKS for the BOROUGH of WATERFORD.—The Town Council of Waterford is prepared to receive plans and estimates for the SUPPLY of WATER to the CITY. Printed specification of the general conditions may be had on application, through the post or otherwise, to JOHN O'BRIEN, Esq. Town Clerk. A premium of 50l. will be paid for the plan approved of.

Town Hall, Waterford, May 5, 1863.

MACCLESFIELD CEMETERY. — The Burial Board are desirous of receiving PLANS, ELEVATIONS, and SECTIONS, with estimates of the cost, of THREE DETACHED CHAPELS, for the Church of England, the Dissenters, and the Roman Catholics. They are to be constructed of stone, and not in an unnecessarily expensive style. Premiums of 15l. 10l. and 5l. will be awarded for the first, second, and third best sets of designs.—The Board to have the right, if required, of returning any of the designs for which a premium is paid. They must be sent to the Burial Board, Townhall, Macclesfield, on or before the 3rd of JUNE next, and any information may in the meantime be obtained at my Office.

Macclesfield, May 6, 1863. JOHN MAY, Clerk to the Board.

TO ARCHITECTS and OTHERS. — The Committee appointed for BUILDING a NEW BAPTIST CHAPEL in Lake road, Landport, Portsmouth, are desirous of receiving PLANS, ELEVATIONS, SECTIONS, SPECIFICATIONS, and ESTIMATES for the same. The Chapel to contain 1,000 sittings, and the cost not to exceed 3,500l. A Premium of 21l. will be given for the approved Plans, for which Plans, &c. are to become the absolute property of the Committee; but the Committee reserve to themselves the right of rejecting the whole of the Plans, &c. if in their judgment there should not be any one suitable for the purpose intended. The Plans, &c. to be sent free of expense to Mr. CROWTER, 149, Lake-road, Landport, on or before the 24th day of JUNE, 1863, without the author's name, but with a motto. A sealed letter, bearing the motto and containing the author's name and address, must accompany each Plan, &c. to be sent.—Further particulars may be known on application to Mr. CROWTER, as above.

Portsmouth, May 14th, 1863.

TO GAS ENGINEERS, &c. — The Town-council of Waterford is willing to receive PLANS and ESTIMATES of GASWORKS for the Public Lighting of the Borough. Particulars can be had from the Town clerk, JOHN O'BRIEN, Esq. on application through the post or otherwise.

TO BUILDERS. Persons desirous of CONTRACTING for the ERECTION of the NEW FOUNDERY, WORKS, and other Buildings, now being erected at Undertown, near Ruby Townships, in the parish of Wore-in-Hurst, are informed that the Drawings and Specification for the work may be seen by application at the Office of Mr. JOHN MARK, Caterton Parsonage, on and after SATURDAY next, but that no Tender is to be taken in the name of the Contractor or responsible tenderer, except the name of the Contractor is stated in the Tender, nor any that does not comply with the specification and conditions.

Caterton Parsonage, Kirkby Lonsdale.

TO BUILDERS. — Persons desirous of TENDERING for the ERECTION of NEW FARM BUILDINGS at Nobb's Farm, Springhill near Chelmsford, can inspect the plans and specifications at my Office at Chelmsford, after the 22nd MAY. Tenders to be delivered to me at Chelmsford, on or before the 1st day of JUNE. The Proprietor does not pledge himself to accept the lowest or any Tender. FRED CHANCELLOR, Architect.

Phoenix Hall, Old Broad-street, London, and Chelmsford, May 14, 1863.

THE GAS METER COMPANY (Limited). The Directors of the above Company require TENDERS from Builders for the EXTENSION of their PREMISES in Kingdom-road, including new offices, foundry, workshops, stores, packing rooms, &c. Plans and specification to be seen and all information obtained at the Office of their Architect, Mr. WILLIAM LEE, St. Michael's House, London. Security to the amount of £500 will be required to insure the completion of the works within the time named. Tenders to be delivered at 5, Coleman-street, City, on MONDAY, the 25th inst. TWELVE o'clock, addressed to A. A. CROLL, Esq., Chairman of the Company.—By order of the Board,

G. BAIL, Esq., Managing Director

BLACKFRIARS BRIDGE. — Notice is hereby given, that the Bridge House Estate Committee will meet at the Guildhall, on TUESDAY, the 26th day of JUNE next, to receive TENDERS for the ERECTION of a TEMPORARY BRIDGE across the River Thames, on the east side of, and adjoining to, Mr. Kirtee's Bridge (now standing on the Surrey side of the River), and the Plans of the Works to be executed, may be seen, and further particulars obtained, upon application at the Office of the Engineer, JOSEPH CURTIS, Esq. No. 1, Great George-street, Westminster. The Tenders must be sealed up, addressed to the Bridge House Estates Committee, endorsed "Tender for Temporary Bridge at Blackfriars," and delivered (sealed) at the Guildhall aforesaid, before 12 o'clock on TUESDAY, the 26th JUNE, and the persons Tendering will be expected to be in attendance at Guildhall on that day at ONE o'clock to receive the Orders of the Committee thereupon. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in

FERDINAND BRAND, Comptroller.

Guildhall, April 30th, 1863

THE CRAYS GAS LIGHT and COKE COMPANY (Limited).—Contractors are invited to TENDER for the ERECTION of NEW GAS WORKS and MAINS for this Company. The Plans and Specifications may be seen on and after THURSDAY, the 21st MAY, 1863, at the Offices of WILLIAM MAY, Esq. St. Mary Cray, Kent, and 2, Adelaide Place, London Bridge; or at the Offices of Messrs. Clegg & Lawrence, Mr. ALBERT PENNY, Wenden Town Works, West Road, City Road. The work is divided into three contracts—Builders' Work, Engineers' Work, and the Laying of the Mains, and Tenders to be delivered in separate envelopes. Tenders addressed "Tender for Gas Works," and sent to the Secretary, WILLIAM MAY, Esq. 2, Adelaide Place, London Bridge, on or before TUESDAY, the 2nd day of JUNE, 1863.

TO BUILDERS.—TENDERS are required for the ERECTION of TWO SEMI DETACHED VILLA RESIDENCES, at Appley. The Drawings and specification can be seen on and after SUNDAY, the 18th inst. at the Office of Mr. HARDY, North-street, Lewes. Sealed Tenders to be endorsed "Tender for Villas at Appley," and left at the GRANDHAM, Esq. 1, Salisbury-street Chambers, St. Mary-axe, on or before MONDAY, the 8th day of JUNE next. The proprietor does not bind himself to accept the lowest or any Tender.

NOTICE.—Royal Engineer Office, Sheerness, 8th May, 1863. TENDERS will be received by the Director of Contracts for ENLARGING a WELL, and SUPPLYING and FIXING a Temporary PUMP, &c. at Sheerness.

Parties desiring to Tender are to obtain the Particulars, together with a Specification and Form of Tender, on application to this Office, between the hours of TEN and FOUR, till the 21st MAY, inclusive.

No Tender will be received after the 25th MAY, and the Secretary of State does not bind himself to accept the lowest or any Tender.

SEWAGE of the METROPOLIS.—The Metropolitan Board of Works hereby give notice, that they have EXTENDED THE TIME for receiving TENDERS for DISPOSAL of the SEWAGE of the METROPOLIS until FRIDAY, the 19th JUNE next. All Tenders must contain a full description of the works proposed, and a time in which the same will be completed, and must be accompanied by plans, and such other information as may be required by the Board, further particulars as to the manner in which the sewage is to be delivered into, and the quantity and quality of the manure which it is to contain, the points at which the sewage is to be intercepted for the purpose to be employed, the mode of effecting such intercepting communications with the Board's sewers, the provisions against flooding, terms of pumping power, or other motive power in the company's works, the mode of deodorisation or otherwise preventing the sewage from becoming a nuisance or injurious to health; the amount of capital to be provided, proposed rate of the shares, duration of contract, and royalty agreed to be paid to the Board. The Board will not entertain any contract, or make any concession of sewage to any parties unless they take all steps necessary for carrying their proposals into effect within a time to be named by the Board; and in the event of failure to do so any agreement or concession on the part of the Board shall be void and of no effect, and in any event a deposit of £5000 must be made to secure to the Board the return of the sewage works, and the full power to re-let and deal with the same, and no further power, in case of any failure of the contractors in their operations, to sell to their full rights, and without any cost to the Board. Tenders must contain the names of two or more sureties, to be approved by the Board, who shall be jointly and severally bound in a sufficient sum, for the due performance of the contract, and for the efficient execution of the works in accordance with the provisions and subject to the limitations of the Metropolis Local Management and Main Drainage Acts, and for indemnifying the Board against all loss, damages, or claims, counter for compensation, legal proceedings arising out of the said works, or out of any act of the contractors. The Board will not bind itself to accept the lowest or any Tender. The plans and sections of the sewers to be used, and information obtained on application at the Engineer of the Metropolitan Board of Works, at their Office in Spring Gardens, between the hours of NINE a.m. and FOUR p.m. on all Saturdays, between NINE and TWO o'clock. Tenders must be delivered at the Board-room, on the 19th of JUNE next, at ONE o'clock precisely, and must be endorsed at the office before FOUR o'clock on THURSDAY, the 5th of JULY next, when Tenders will be opened in the presence of such of the Tenderers as may attend. Tenders, and who may be desirous of altering or amending their proposals, may obtain them on application to the Clerk of the Board.—By order,

JOHN POLLARD, Clerk of the Board.

May 14, 1863

TO STONE MASONS, MERCHANTS, and QUARRYMEN.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive Offers of GRANITE CURB, and they hereby invite TENDERS from parties who may be willing to contract with them for supplying such Granite Curb, and for Laying and Repairing the same, according to the Plans, Specifications and conditions now be examined, and forms of Tender obtained, by application to Mr. MARSHALL, the surveyor to the Board, at his office, at Rokeby House, Stratford, E., and Tenders are to be sent to me on or before MONDAY, JUNE 8th. By order of the Board,

CHARLES WILSON, Clerk.

Rokeby House, Stratford.

NOTICE.—To Stone Merchants, Paviors, Contractors and Others. The Woolwich Local Board of Health will meet at their Board Room, Widgate-street, at SEVEN o'clock in the Evening of TUESDAY, the 26th inst. to receive TENDERS for the supplying and LAYING about 15,000 SUPERFEET SUPER. of FIRST CLASS GINCH YORK, and 15,000 FEET SUPER. of 6 INCH YORK PAVING, ROLLED and SQUARED, in such streets within the parish as may be selected. Also for the supplying and Laying about 7,000 feet run of Aberdeen Granite Kerb, 12 in. by 6 in. and 7,000 feet run of Aberdeen Granite Channelling 9 in. by 6 in. and 6 in. by 6 in. Copies of the specification, with form of tender, as such, may be had by application to Mr. REED Clerk to the Local Board, on or before the 24th inst. The Board do not bind themselves to accept the lowest or any Tender.—By order,

ANDREW C. REED, Clerk.

Town Hall, Woolwich, 11th May, 1863.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for LAYING GRANITE CURB, and also for supplying such road-metal and labour as may be required in making and repairing the streets called Stratford street, Newton street, Crawford street, Salbarton street, Arkwright street, Fulton street, Brunel-street, Upper, Middle, and Lower Park Streets, Montes mens-street, Rathbone-street, Pitt street, Burke street, and Clarke's street all in Hallsville, with in the district, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board, and which may be seen at the Office, at Rokeby House, in Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed "Tender for Roads," are to be sent to me, on or before MONDAY, the 8th of JUNE next.—By order of the Board,

CHARLES WILSON, Clerk.

Rokeby House, Stratford

TO BUILDERS.—TENDERS are required for the ERECTION of FOUR EIGHT-ROOMED HOUSES in Deptford. Plans and specifications may be seen on and after the 16th inst. on application to Mr. W. CLARK, 27 Buckleysbury, E.C. Tenders must be delivered on or before the 21st inst. The lowest or any Tender will not necessarily be accepted.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 18 2.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CABINET MAKERS, and BLIND MAKERS

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774

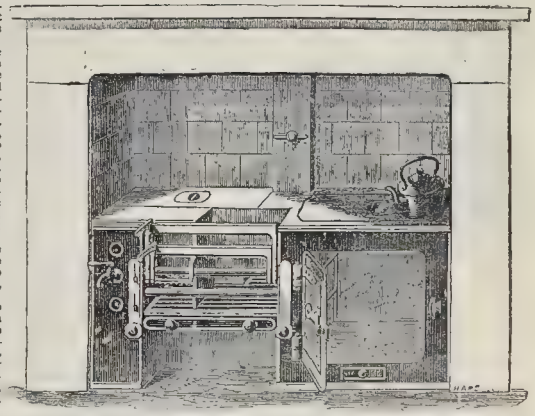
CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.



The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

The sliding Hob, which is fastened to the Winding Cheek, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,

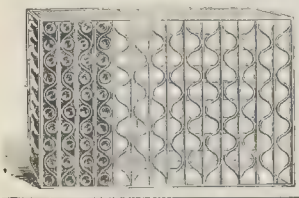
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

FARROW & JACKSON,

MR. THOMAS BEGGS,
37, SOUTHAMPTON STREET, STRAND, W.C.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS

It is an entirely new invention, and consists of large MEAT ROASTER, EASTRY OVEN, and WROUGHT-IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 3 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER,
AGENTS FOR LONDON: BARRON, SON, & WILSON, 426, STRAND, W.C.
Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.

This Improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or cast iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary floorings-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as affording the most perfect description of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI.

CHUBB'S LOCKS,
with all the recent Improvements,
STRONG FIRE PROOF SAFES, CASH AND DEED BOXES.
Complete Lists of Sizes and Prices may be had on Application
CHUBB and SON,

IMOPRTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1740)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI. and many other styles; also to their elegant Panel Decorations, Arabesque and Gothic Bodies, Door Caps, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and eighteen years' practice of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, offices, &c. in which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Patentees are invited to inspect the large variety of Glass Frames, Tables, Cornices, Sconce Candelabra, &c. The extensive nature of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti damp, and is suitable for contractors, joiners, cabinet-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—
"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from coals piled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gosport wharf, Portsea, for her Majesty's War Department."
To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos-street, Portsmouth; Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

OAK PULPIT and READING-DESK for SALE.—Apply to Mr HOWSE, Parish Clerk, Hendon, N.W.

Rent (taxes and rates included), 35l. per annum.—Apply, post-paid, to W. W. 2, Bloomsbury terrace, Commercial road East, E.

W. W. NICHOLSON, Civil and Mechanical Engineer (many years with Messrs Cubitt & Co. Builders), begs to inform his friends and the profession, that he may be consulted on matters connected with the above branches, and is prepared to furnish Designs and Detail Drawings, Quantities for every description of Iron Work connected with Dock Building, Bridges, Iron Roofs, Warehouses, Railway-stations, and general works, and to supply Iron Work for the above purposes.

The Builder.

VOL. XXI.—No. 1058.

Fresh Excavations on the Roman Campagna.

EXCAVATIONS begun last February, near the eighth mile from Rome, on the Flaminian Way, have laid open remains of a Villa of Livia, mentioned by classic writers, and well rewarded the proprietors who undertook these works, supplying one more proof how rich is the harvest to be yet secured beneath the unexhausted soil of the Campagna! The expedition to *Prima Porta*, site of these discoveries, though through one of the least frequented and least monumental regions of the Roman environs, is full of interest and historic association. Crossing the Milvian bridge, we take the road improved, after long abandonment, within late years, and now generally preferred for the journey northwards to Civita-castellana, following the track of the Flaminian, whose ancient pavement is seen, in considerable portions, after a few hours' progress, exactly correspondent to the direction of this modern route. For several miles we have the scenery of the Tiber valley, impressive in its solemn solitude, spread far in view to our right; and at a short distance from the Milvian bridge, we distinguish, on the river's opposite bank, the uncultivated grass-grown mounds where once stood Antemnæ: farther northward are the more boldly-rising heights once occupied by Fidenæ, whose acropolis is marked by a large spectral old farm-house, called Castel Giubileo, on a lofty promontory conspicuous above all the knolls and ridges around. The direction of the ancient Flaminian Way may for several miles be traced by the frequent ruins of mausolea, once, perhaps, splendid as those in the Appian, but far more dilapidated, probably owing to their immediate exposure to the outrages of successive invaders from the North: their general plan, however, still distinguishable, the prevailing form either circular or conical, with the sepulchral chamber in the centre. More singular is the formation of others seen at different points, close to the wayside, entirely excavated in the tufo rock, —some with vaulted ceilings, hollowed out with perfect regularity, presenting a type of which there is no example on the Appian, unless we may except (what indeed is very different) the subterranean cemetery of the Scipios. A narrow bridge carries us across the Cremera, whose quiet little stream brings to our thoughts Veii, Camillus, and the ten years' siege; while from its grassy banks, at this spot, the eye follows the windings of the long valley, between low uncultured hills, in which that city stood. Not far hence we cross another stream flowing into the Tiber, opposite the mouth, hence discernible, of the Allia, on whose banks the Romans sustained their most signal defeat by the Gauls, under Brennus. A grim Mediæval ruin, that must have had its day of pride in impregnable strength, stands on a precipitous height near the entrance to that valley of the Cremera. From this point extend, left of the road, a series of rocky ridges, lithoid tufo, of reddish yellow hue, adding a finely-contrasted feature to the rather monotonous landscape; and where these rocks rise to their boldest eminence they assume a name for ever renowned in association with an event of mighty import to the destinies of Christian Europe—*Saxa Rubra*—the battle between Constantine and Maxentius, the last decisive triumph over Paganism, having been fought on the wide plain through which the Tiber flows in a broad serpentine channel, below those heights so obviously suited to strategic operations. Beyond the northern limit where the tufo rocks subside into low undulations, a massive ruin, apparently the substructure of an extensive villa, advances from the grassy slopes of a ridge under which the road passes before taking a sudden turn, and bringing us, at an angle, to the little village, Prima Porta, whose sole street is formed by a chapel, an *osteria*, and about a dozen wretched houses. Immediately above, to the right, rises a steep knoll, now identified beyond doubt as the site of the Empress Livia's villa on the Flaminian Way, mentioned by Pliny and Suetonius. Having climbed to its summit, we could not but stop, before pursuing archæologic objects, to admire the grand and extensive landscape here spread before the eye, one of the finest panoramic views of the Roman Campagna. We found on this platform-summit, which is quite without culture, several labourers at work under the superintendence of a proprietor in whom courtesy and intelligence were not wanting. As yet there is nothing to observe on this site except several quadrate chambers opened at a depth little below the level of soil around; and within their areas the remains of decorative painting on stucco, crumbled off from interior walls, remarkable for vividness of tints, but not for any designs or figures on the fragmentary surfaces. All the more precious objects have been removed from these unburied ruins to the deserted rooms of an old house near the village, whither our obliging guide, the superintendent proprietor, conducted us. A rich variety of antiques is prepared to delight the archæologist in this improvised museum, whence nothing has yet been withdrawn: busts, marble and terra cotta ornaments for architecture, several antifixes being among these, fragments of marble reliefs, masons' *signa* on tiles, broken vases of glass, much oxydized; conduits of terra cotta, on one of which is the name Tiberius; and more interesting remains of painting on stucco in style similar to the Pompeian, with figures and heads of good design, the tints here also vividly preserved. But the greatest treasure, the discovery of which has made a sensation in Rome's artist-circles, is a statue of heroic scale (reported to be 11 feet), now laid on its back, at once recognizable as Augustus, and believed to represent him in the deified character; the head and body perfect; the right arm broken off, but happily preserved in numerous fragments; the legs also, and both feet broken, but in no part lost,—so that the complete restoration with the antique material will be an easy task. The countenance is very noble; indeed, among the many likenesses of this emperor at Rome, where they so abound, perhaps the most intellectually-expressive, regal, and serene; the profile, especially, of finest type, and the attitude of correspondent dignity; costume, a richly-ornamented cuirass, chlamys, military tunic, and buskins; and the advocates for the system of applying colour to sculpture will be gratified by the authority here in their favour, inasmuch as the cuirass and tunic retain clear traces of red paint, now reduced to a soft carnation, though not the slightest remnant of tinting appears on the head or nude parts. After we have admired that fine countenance, attention is arrested by the singular beauty of detail in the ornamental reliefs of the cuirass, the part covering the breast adorned by the figures of Aurora driving her quadriga, preceded by the winged Lucifer, and overshadowed by the *cælum*, an aged man with sweeping draperies extended on each side in semicircular folds; in the lower part, Apollo playing his lyre, mounted on a hippogriff; two warriors meeting, one the standard-bearer holding the vexillum with its eagle, the other accompanied by a dog, to symbolize fidelity; a subject province represented by a half-prostrate figure giving up a sword; and lower than these, Abundance, a female recumbent with the cornucopia.

In the ornamental sculpturing of military costume, of which many examples are seen in the Vatican and Capitoline Museums, none equal this latest-discovered example, or attain its effect of delicacy and richness. Noticeable among the other objects are busts, all in good preservation, and of superior style; one resembling Septimius Severus, with peculiarly forked and curly beard, in marble, blackened as if by the action of fire; another of a female, whose elaborate head-dress shows that the artist must have copied a wig; another of a youth, pleasing though not handsome, who wears the toga with a broad laticlave across the breast, here peculiar in being *quintuply* folded, each fold distinctly marked. Two well-finished reliefs of sphinxes are on a species of lappet ornament belonging to the costume of the Augustus; on the fragments of a large urn, which might be a sarcophagus, are other figures in relief, distinguished by beauty and freedom, the subject apparently (to judge from the attitude of one, falling dead or swooning into the arms of another), the slaughter of Niobe's children. On one of the stamped *signa* is a tiny figure of Fortune, in the centre of the disc, with the legend around: OPVS. DOL. DE PRAED. AVGG. EX FIGVLA D. CAECILLIAE AMANDAE. At present the works here are not being carried on with great activity, and the coming season of intense heat will not allow of more energetic pursuance; but we were gratified by hearing from the proprietor that his intention is, when October brings facilities for hiring a greater number, to keep 140 men every day at these excavations. The Papal Government reserves for itself, in regard to newly-discovered antiques, a right of purchase at the terms fixed by appraizers it appoints to estimate their value, but leaves the discoverers at liberty to prefer the offers of a higher bidder. In the year 1862 were exported from these States ancient sculptures of the value of 532 scudi; ancient paintings, 9,596 scudi; the value of *modern* exports that year being, for pictures, 119,537 scudi; for sculptures, 188,325 scudi.

The Pope has given permission, as announced to the Archæologic Academy, for excavating that part of the Palatine declivities comprised within the grounds at the north-western side, purchased several years ago by the Emperor of Russia, but after a time presented by him to the Pontific Government. In course of the works for building barracks within the Prætorian camp have been found several epigraphs, and a subterranean corridor of good construction, supposed to extend far, but not accessible to the public. Also some sepulchres formed inside the cells of the military, without any indication of date, but certainly belonging to a Christian period after the removal of prohibitions against intramural interment.

In the restorations still progressing at the basilica of S. Lorenzo beyond the walls, has been laid open the ancient level of a lateral portico, adorned with frescoes, illustrating that martyr's story, in several compartments, with inscriptions, evidently Mediæval, and concluded to be of the twelfth century; likewise, under the pavement of the present naves, several sepulchres, having in one, near the shrine of St. Lawrence, a body wrapped in cloth of fine texture, which had evidently been embalmed, and was covered by a stratum of plaster. On these remains, attached to the breast, was laid a gold cross, about an ounce in weight, wrought on both sides in niello of great elegance, with the words on the front:—*Emmanuel nobiscum Deus* (the first name Greek, the other words Latin); and on the reverse,—*Crux est vita mihi, mors inimice tibi.* This cross is recognized as one of those reliquaries for wearing on the breast, called by the

Byzantines, *encolpii*,—see the report by De Rossé, in his "Bulletin of Christian Archæology" for April, who conjectures for date of this object the sixth century. The discovery of entrances to two catacombs on the Salarian Way, and in those hypogees some primitive Christian paintings among the most valuable, have been already reported on in a *brochure*, with two coloured plates, by the Abbate Scognamiglio; one engraved original, in this series, the Virgin and Child, with a figure, probably St. Joseph, supposed to be of the first century.

The 21st of April is celebrated by learned societies here as the anniversary of Rome's foundation. In the last instance the members of the Pontific Archæologic Academy* met in the pleasant gardens of Prince Massimo's villa, on the site of the Sullustian, to listen to discourses, and partake of a good dinner. Before that substantial entertainment, Mgr. Bartolini read an essay on the glories of the Eternal City, under Paganism and under the Popes, to an audience including Cardinals and Princes. Before dispersal, Visconti proposed that all should adjourn to the Palatine. There was first inspected the site of the intended (not yet commenced) works of excavating on the Mount's north-western slopes; from thence the Academicians passed into the Farnese Gardens, to examine the excavations so long in progress at that side. Here they were soon joined by no less illustrious a visitor than Pius IX., who good-humouredly attached himself to their party (after, of course, due honours paid), and with the rest listened to the explanations of Signor Rosa, director of these works, undertaken by the French Emperor. We observe a new system in these Palatine Gardens, adopted by Signor Rosa for the information of visitors, carried out to an extent that may sometimes excite a smile from the sceptical, and sarcastic comment from the learned in Roman history. Sign-posts are erected with the designations of the several localities recently brought to light, or disencumbered; and we read in large letters, not only the titles *Triclinium Accademia, Domus Victoria*, but such startling announcements as that "*Here* stood the cottage of Faustulus, —'ubi Romulus mansitavit;'" "*Here* was the summit of the staircase called '*Scalarum Caci*.'"

On the 24th ult., the Archæologic Institute, of German origin and supported by German energies, met at their well-stocked library, on the Tarpeian Rock, for the last reunion before the summer recess. To an unusually full assemblage the principal report was read by Dr. Brunn, secretary, who principally dwelt on late discoveries in the Neapolitan States; the remains exhumed at Pompeii, of human bodies as well as artistic ornaments, and various decorative objects, some in wrought gold, from the soil of provinces corresponding to the territory of Magna Græcia. During this lecture were handed about engravings of the more interesting works described, most remarkable being that from a bronze Bacchus,—a statue, below life-size, found at Pompeii; the grace and correctness of this figure, the beauty of the head and general outlines, such as to impress every beholder. Coloured drawings and photographs from Pompeian antiques assisted the audience in appreciating objects described; and in a glazed cabinet was seen a collection of gold ornaments from Magna Græcia, vying with, if not surpassing, the Etruscan jewelry so much admired at the Vatican.

* This Academy was founded by Pomponio Leto, at his house on the Quirinal, already converted by him into a Museum of Antiques, shortly before the year 1482, and the first Christian celebration of Rome's anniversary took place, under the same superintendence, at the Church of Araceli on the Capitol. The Academicians were favoured, and new life given to their proceedings, under the Pontificates of Julius II. and Leo X. They disappeared after the atrocious sack of the city, in 1527, not to be resuscitated till 1700, when Clement XI. became a patron; and since 1814 they have enjoyed an assignment from the treasury, bestowed by Pius VII. Gregory XVI. allowed to them the gratuitous use of the press of the apostolic Camera.

ROYAL ACADEMY.*

IT was hardly to be expected that Mr. Millais would allow his reputation for the year to rest upon two such unostentatious productions as "My First Sermon" (7) and "The Wolf's Den" (498), charmingly simple as they are, and extraordinary for the matured power that signalises them. The merits of these are perfectly unquestionable, and put aside all chance of that discussion which apparently he often delights in provoking. Some such motive must have actuated his treatment of Keats's heroine in "The Eve of St. Agnes" (287). Apart from its pretensions to embody any ideas but those of his own conceiving, this picture, whilst it will dissatisfy as an illustration of the poem, must create wonder at the imitative power that distinguishes it. Moonlight has never been painted with more literal truth; and this interior, merely as an abstract representation, is a triumph over great difficulties, and extorts admiration, however reluctant one may be to accept every-day reality as a medium for interpreting a purely imaginative description. The fault lies in attributing to the picture any connexion with its stated origin. There is nothing to identify the ordinary-looking damsel, in one of the least picturesque attitudes incidental to unrobing, with the exquisite illusionary Madeline; so that there was the less excuse for further eliminating the poet by substituting sixteenth or seventeenth for fourteenth century accessories. Mr. Millais is never so apt an illustrator of others' ideas as of his own: his greatest successes are the best proofs of this; his "First Sermon," propounded upon a very original text indeed; and his admirable little household story, furnished by those eloquent little brothers grim in their wolf skins, about a lovely fairy, of snow-drop notoriety, to wit.

Mr. Cope's name has been often associated with some such pleasant phases of domestic interest as his "Music Lesson" (46) and "Morning Lessons" (221), both having a charm of their own; and Mr. T. Faed, with a more homely force and broader humour, goes to a similar source, though lower down the stream, for refreshment. "Train up a Child," &c. (in the way it should sew?), introduces us to a labourer's family, the head of which is watching with fatherly approval his busy pet of a daughter, seated on his knee, as she carefully sews on a button to the wrist of his shirt-sleeve. This is the most noticeable of Mr. Faed's contributions this year, all marked by the luminousness of colour and dexterous manipulation that are patent to him.

Mr. W. P. Frith's "Juliet" (100) proclaims relationship to many similarly graceful personifications that have preceded it; and although not too efficiently representing its author, it is invested with enough of the painter's fascinating method of execution to make it autographic.

Mr. Elmore's "Lucrezia Borgia" (130), beyond showing superlative technical qualities, is equally striking for definition of character, although his gorgeously-dressed and voluptuously-formed ideal may be somewhat too much in consonance with vulgar presentiment. This performance contains the essence of all that constitutes Mr. Elmore's excellence, and for brilliancy and precision of touch could scarcely be surpassed.

Mr. F. R. Pickersgill's "Isabella, Duchess of Clarence, urging her husband to abandon the cause of the House of York, and support that of Lancaster, A.D. 1470" (140), suffers from its neighbourhood to a consequent charge of appearing more flat than perhaps in the absence of such a contrast would be justified. A sparkling fancy portrait of such another boy in promise and parts as Henry VIII. must have been, before his predilections for havoc *in futuro* had supplanted a taste for bowls and knocking down nine-pins, will attract immediate attention for its elaborated finish and quaint treatment. "The King of Hearts" (146), by Mr. W. Holman Hunt, seems to have been naturally adapted for recalling Holbein and his times, irrespective of artistic fittings.

The veteran, Mr. T. Webster, is as genial in his comprehension of the unaffected enjoyment that would appertain to "A Tea-party" (159), such as he has so pleasantly depicted, as he is sympathetic with the poor bereaved peasant, who, "Alone" (165), is striving to derive consolation from the unfailing source of it: The widower, but just returned from his lost wife's funeral, would appear to offer subject matter for a demonstration of violently-expressed grief, but the excessive refinement with which the struggle for resignation is suggested, has deprived it of none of its intensity; and though the overwhelming nature of his grief is simply denoted by his inability to think of anything beside it,—his eyes dreamily wandering even from the words of comfort he so thirsts for,—the story is much more pathetically told than might have been the case if more dramatic means had been called into requisition. Mr. Webster has many disciples in his adherence to an always popular class of art, and not one more promising, or more likely to become distinctively prominent than Mr. J. Clark. "After Work" (122) will revive some of the anticipations his earliest works excited; for, though not equal to such an instance as his "Sick Child," there is a perceptible improvement upon productions of a later date. It has none of that woolliness and timidity of execution common to these. With less of sentiment, Mr. G. B. O'Neill's works are as generic in their way; "Aunt Deborah's Pocket" (121) and (357) "Public Opinion" inclusive.

The Greek pastoral of Mr. P. F. Poole (191), with some verses to describe it, is less successful as an example of poetic rendering than is customary from him, and more idiomatic of his failings than his strength. Mr. J. C. Hook's "Leaving at Low Water" (335) may be selected as epitomizing the leading characteristics of his style, so delightfully fresh and vigorous, and always without the slightest taint of vulgarity in its realization of truth. His comely fisher-wives, loutish sailor-lads, and sunburnt urchins, become epic, unassisted by adventitious sentimentalism; and his rigid observance of, and confinement to, fact, strangely enough appear to make him inimitable where imitation is easiest.

We cannot yet assimilate the fruits of Mr. F. Goodall's Oriental travel and study with his anterior reputation. His picture of "The Palm Offering" (515), representing an Arab widow carrying palm branches wherewith to decorate the grave of her husband,—according with a wider obtaining custom wherein flowers are substituted,—is powerful, both in its expression and the solidity with which it is painted; but in praising it we retain a preference for much that has preceded it from the same hand.

Mr. F. Leighton's four pictures have high merit, and together compass remarkable talents. His Bible illustration, however, though of the grand historical size, is by no means the most favourable exponent of this. "Jezebel and Ahab, having caused Naboth to be put to death, go down to take possession of his vineyard: they are met at the entrance by Elijah the Tishbite" (382), is the theme upon which Mr. Leighton has dilated with great spirit and force. The amount of success attained in it must certainly be attributed to the executive ability it indicates, and some of it, perhaps, to the tragic fervour of Jezebel. Elegance is very distinct from grandeur; and adopting a wide range of selection in regard to material is no proof in itself of versatility. A taste for extreme elegance is the dominative element in this artist's imagination; and, when appropriately exercised, leads to pre-eminently fascinating results, as will be best asserted by the exquisite incarnation of sybaritic loveliness, "A Girl with a Basket of Fruit" (406), and in a lesser degree by his "Girl feeding Peacocks" (429). On the other hand, how prevailing this influence is, and how difficult of subjugation, is intimated even in the stern, harsh "Italian Crossbow-man" (528), and to a greater extent in the figure of "Elijah," who, rouged giant as he is, threatening to bring away with him some of that fragile wall of the vineyard, is emasculated by the effects of it.

* See p. 325, *ante*.

ARCHITECTURE AT THE ROYAL ACADEMY.*

AMONGST several works exhibited by Mr. E. M. Barry, is a view (910) of St. Stephen's Crypt; and No. 912 is a view of the entrance. According to the original intention of Sir Charles Barry, the crypt is in course of restoration to serve as a chapel for residents in the Westminster Palace. We should have hardly supposed, from recollection, that so good a light could be got, as that shown in the principal drawing. The *severies* of the groining are enriched with floral ornament and monograms on gold ground, and the bowtel mouldings of the ribs with rosettes: the spaces beneath the windows are decorated in diaper with inlaid marble; and the floor is of encaustic tiles. The super-altar, or centre of the reredos, seems to be an ad-

* See p. 328, *ante*.

dition; at least, the detail is not quite in character. Mr. Barry's "New Chapel, Leeds Grammar School, in course of erection" (913), has, as shown in the drawing, a crude effect in the painted ornamentation of the main ceiling, or too like floor-cloth. The sacrarium ceiling, having monograms on blue ground, in compartments, is better in character; albeit it may be less novel. There is no strongly defined chancel, or sacrarium arch,—whether the omission be a defect or not: the ceiling only is spanned by wooden ribs rising, as arches, from shafts. A third work by Mr. E. Barry, a completion of one commenced by his father, is exhibited under No. 920, comprising three beautifully-executed drawings of portions of the interior of the Town Hall, Halifax, in Yorkshire. The principal portion, the Central Hall, without our saying that it has very great novelty,—a requisite quality indeed which we both desiderate and fear,—is one of the best designs for the feature of a building suited to such a town, that we have seen for some time. Our readers know we have come to think little of written description, in cases where explanation is peculiarly the office of drawings, as it is so peculiarly in the case of designs which are of the first quality. In the case of the Halifax building, if we might attempt description of the interior, we should say that the main features are the balcony-gallery carried by a bracket-cove, into which groin arches that rise from pilasters at the sides, and the cove and plafond of the ceiling,—the former being, except as to the supporting ribs, completely glazed, and in diamond-shaped panes with star-formed ornamentation at intersections of the bars. A Corinthian order of pilasters in the upper story, a balustrade (inferior to other parts), arch-headed panels for paintings, lunette-spaces for shields and supporters, and statues on pedestals in front of the pilasters of the ground story, complete the design. A council-room and a committee-room are shown as having wainscotting, oak ceilings coffered, or framed in compartments, and crimson and gold wall-decorations.

Coming back to London and its river, we find "The Proposed Tower Bridge over the Thames at the Tower Stairs" (896), designed by Mr. Page. It consists simply of plain arched ribs of iron, and spandrils filled in with light rectangular framing. The piers of the abutments are but poorly designed; indeed the decorative character in the whole bridge, is scarcely what might be looked for in works of which drawings are admissible in the Academy. The bridge is designed for a high-level way, as most of our readers would know. In "The Lendal Bridge on the River Ouse, at York" (904), by the same engineer, there is more attempt at decoration: but it is not quite successful; and the tracery in the spandrils is not good, regarded from the Gothic point of view. The toll-houses and abutments are castellated or Gothicised; and the arch-opening appears to be slightly pointed. These peculiarities are no doubt induced by desire to conform to the *genius loci*. Useful inquiry might be opened into the question of the obligation to make the efforts as in the case of an association of position of new works with others which may be of much earlier date, and of different style to any prevailing in our day, conformable to such date and style. Ought Telford to have designed the piers or towers of the Conway Suspension Bridge, as he did design and build them, to appear as outworks of the castle? The public approve in that case,—see every guide-book to North Wales,—whilst the engineer of a second Conway bridge decides any question that may have suggested itself to him, as did his predecessor. Can the engineer and architect, knowing that suspension and tubular bridges are creations of modern days, assent to the mimicry which there is in certain features of these Conway examples, for the sake of the good word of his constituency, the less-educated public? Are the gentry of Wales right in building their mansions on the type of Caernarvon and Chepstow Castles,—considering that the harmony which is thought to be attainable, results in deception, and in an impression when the true character is detected, that the work is childish? The employer who pays the cost, will often have "his way;" but a profession of artists should have a defined principle to govern its advice, if not also to act upon.

Captain Fowke exhibits two views (905, 929) of a "Design for Completion of the International Exhibition Building," which suggests too strongly the Louvre. In the Exhibition-road front, we find the centre extended in appearance of width and height, and the dome modified greatly, if not rebuilt. Amongst the features coming from the Louvre, and placed exactly as they are there, are the Caryatides; whilst in the angle pavilions, the form and general treatment of the roofs are no less copied. An order of engaged columns is combined with that portion of the new façade in which the mosaic pictures would occur. The Cromwell-road front would be little different from the other, excepting in the greater width of the centre portion of the design, and in the absence of the dome, as at present.

"The Palace Hotel, Buckingham Gate" (918), by Mr. John Murray, is a pretty accurate transcript of the Italian manner of Sir Charles Barry. It would be a valuable addition to the architecture of London, were the material any other than cement. This material is, we apprehend, to be used by Mr. Marrable in the Italian front of the much smaller building, for the Garrick Club (now erecting in the new street leading from King-street to Cranbourne-street), a view of which with adjoining buildings is shown in the drawing No. 909. The staircase, having nothing in it, but an oval in the ceiling, to redeem the whole from common-place, appears in No. 931. In the front, the doorway is neither in the centre nor at one end; and the result so far, is not good. Otherwise, with a more pronounced character in the ground-story, the design might have been effective in stone: cement, if used, should have a treatment for itself; although, in my case, it blackens sooner even than the other material; and three years may be taken as the utmost life-time of the best design. After that, the process of clogging-up and rounding-off by the application of paint or wash sets in. A view of the Board-room of the Metropolitan Board of Works (907) is shown by the same architect. There are features of the interior of that building which are more creditable to Mr. Marrable's taste, as well as professional skill. A drawing (915) of the Langham Hotel, of which a small photograph was noticed by us in the Conduit-street exhibition, is exhibitited by Mr. J. Giles, with whom is now associated Mr. Murray. Six stories of windows, mostly arch-headed, whereof one story is in the *cornicione*; a high-pitched roof with dormers and lucarnes; two projections in the north front, well treated as pavilions, but having bows, each of only two stories and not exactly harmonizing with the rest of the building; a rather awkward arrangement of re-entering angles and a cant to suit the rounding-off of the north-east corner, where a square and domical-roofed tower is placed, are the main features of the design. Though amongst these features are several which detract from the work, the northern façade, if in stone, will be an addition to the better part of the London architecture. The building will however, be fatal to the portico of Nash's church, which abused though the building have been, deserved a better fate. Is there to be attempted, the institution of some machinery of Government, or the Academy, by which can be prevented these interferences by private rights, with the public right in a prospect or a piece of architectural effect.

The manner of Sir Charles Barry before named, is very marked in the City of Norwich Hotel as proposed to be erected by Messrs. Banks & Barry. The drawing (928) shows also the intended Public Assembly Rooms. The building would have the feature of a clerestory with a modification of buttresses, and with arch-headed windows. A pediment with sculpture; a line of louvre-ventilators, breaking each slope of the roof; and a two-storied projection at the end of the building, super-pilastraded, are some of the other features. That portion of the building corresponding with aisles, has pilasters or piers, round which the cornice breaks, combining with the buttresses. The windows here are in two stages, the upper one being square-headed; and the working out of this arrangement is almost the only detraction from what is a very good design. The building would be of brick and stone.

Mr. G. G. Scott's drawing (914) of the new Leeds General Infirmary, is one of the cases where section, if not also plan, (the slightest sketches,) would, —even in the Royal Academy intention of exhibiting architecture, the art,—have been useful, and important to fair criticism. The arrangement of the buildings as a central block and two side blocks, is, judging from the view, the system of the plan; which thus, may be in accordance with good principles of hospital-planning; but as the whole of the window-lights are pointed, and the majority of the heads are large and filled with the Early-Decorated character of tracery, we cannot help desiring to know that the upper parts of the wards are so well lighted and ventilated, as they would be with the use of horizontal lintels, and window-heads close to the ceiling. This may not be the first time that we have found this question suggested by designs of a similar character of architecture: the question is one peculiarly appropriate for renewal in the case of a design for a hospital, and as illustrative of our point, the insufficiency of mere views. It might not be at any time satisfactory for the exterior of a building to give the idea of internal closeness and darkness; but where it were *shown* that the case was not so, we would accept the facts as artistic justification enough. Top stories seem to be lighted by dormer windows: are the ceilings which attend the use of such features, favourable to hospital uses? The carriage-porch, parapets, and gables, and other features,—in red brick and white stone,—have all the character of Mr. Scott's recent works; which is saying that they have some considerable beauty and merit.

A design for the Queen's Hotel, Aberystwith, by Messrs. C. F. Hayward and H. D. Davis, is exhibited in No. 923. The building promises to be, in character, an effective combination of features suggested by both the Italian and the Gothic, without the features being copied from those of either style, or suggesting the superiority of any particular examples. Such is the course which modern design should take, whatever may be the estimate of the success in the present instance. The continuous balcony to the second story, the balcony and verandah in one of the upper stories, and the balconies at canted angles of pavilions of this hotel, are features which are well managed, seeing what are the uses of the building, and the economic stone-construction throughout.

The hotel at Cannes, in France, appears as the principal work in a view (900) of buildings erecting by Messrs. T. Smith & Son. It is in the French Italian style; and the superiority in all points of its design to that of the other buildings, some of which are English Gothic, is noticeable, and curious as fact.

Several drawings of churches may be found. Mr. Burges exhibits a view (925) of the interior of Cork Cathedral according to his design; it comprises the apse and the cross. We give an engraving of this interior, a plan, and some particulars, in our present number.

Mr. Street is clever, as he always is, in the Church of All Saints, Denstone, Staffordshire, views of the interior of which (903) are shown. Mr. Bury is correctly Gothic, and able, in all the grouping and details of his "Decorated" church erected at Hanger-lane, Stamford-hill (893); Messrs. J. & H. Francis exhibit a view of Christ Church, Paddington (906), with the tower and spire which they are about erecting; and Mr. P. C. Hardwick shows a clever design for a red brick and stone, "Decorated" Gothic church, "now being erected at the permanent barracks Aldershott" (895). Mr. T. H. Wyatt, Mr. E. B. Lamb, Mr. C. H. Cooke, Mr. R. P. Spiers, and Mr. D. Brandon also are amongst the exhibitors. Mr. H. E. Coe shows an interior view (926) of "St. Philip's Church, Lambeth;" Messrs. Pugin & Ashlin a good drawing of a cathedral (935), and Mr. R. M. Phipson views (932, 938) of St. Mary's Tower Church, Ipswich, which is being nearly rebuilt under his care. An interior view of his theatre, Bath, already described at some length in our pages, is exhibited by Mr. C. J. Phipps (933).

An interesting production, the last of those in the exhibition, that we can name, is Mr. Ashpitel's "Restoration of the Basilica of Constantine and Maxentius, from a very old plan in the Royal Library at Windsor" (902); but unless Mr. Ashpitel have positive authority for more than plan, we should be apt to doubt whether the details of some of his windows, and the manner of his rustication, may be regarded as of the Roman period of architecture in Italy.

We now terminate our series of notices of the chief exhibitions of architectural drawings of the season. It may not gratify our readers next year to have a similar review, at the same length; but we could not, in this case, allow opportunities to be lost, of saying many things which we believe, in the present state of the art and profession, need to be said and repeated; and we hope that in taking advantage of productions in either of the exhibitions, for the remarks that perforce suggested themselves,—or of buildings, few of which are not in some way honourable to their architects,—we have had approval even from authors of designs that may have been commented upon. Our general aim is obvious; and could we succeed only in getting improvement effected in the manner of the exposition of architecture, especially in the Academy, — in getting substituted the nearest approach to the thing itself, for the single perspective views which offer but one small part of it, —we should claim to have done something towards

the proper placing before the public eye of the thing, not "pretty drawing," but real architecture.

BRITISH SCULPTORS.

THE FAMILY OF "THE CHRISMASES."

IN his chapter on "Painters and other Artists in the Reign of James I.," Walpole has properly included the name of GERARD CHRISMAS. To the little that Vertue had collected about Chrismas, and Walpole bought of Vertue's widow, the noble author in white kid gloves added a stray fact or two. A waif fact and a worthless inference were added by Walpole's first editor, Mr. Dallaway. To these slight materials for making the family of "the Chrismases" known to all who study the history of art in England, Mr. Wornum, Walpole's second and last editor, has contributed "nothing." To the little of Walpole and the "waifs" and "nothings" of his editors I have something to add.

When first at Guildford, in Surrey, some sixteen years ago, looking about me for materials towards a long-promised "Handbook to the Environs of London," I (purse in hand, as in duty bound) sought a tourist's admittance to Trinity Church, an ugly red brick rebuilt edifice of the Batty Langley age, pleasantly seated in a very pretty and clean town. My principal business purpose for the day was to stand by the tomb of George Abbot, Archbishop of Canterbury, a Guildford man, and a man of note in a stirring period of English history. One reflection that passed through my mind at the time deserves historical remembrance for its contrast and its truth. Dates are suggestive. On the very day that Abbot died, Laud, bishop of London, translated to Canterbury on Abbot's death, was offered a cardinal's hat!

The monumental effigy of Archbishop Abbot was more than "up" to my expectations. I scanned the tomb narrowly, and to my surprise observed what no historian of Surrey tells us—not Manning and Bray, not even Brayley,—what no historian of art tells us,—not Walpole, not Dallaway, not even Wornum,—that the tomb of Archbishop Abbot carries its sculptor's name. Abbot's tomb was the work of Gerard Chrismas and his sons.

Who were his sons? Another shilling spent at the "Prerogative Will Office" of the Archbishop of Canterbury in Doctors' Commons, and my curiosity was slaked. Garrett or Gerard Chrismas, "*citizen of London, and carver*, weak of body but strong in faith," made his Will in the year 1633, and died in 1639, new facts both in the sculptor's history.

Readers of the *Builder* will be pleased with a few particulars from a source so authentic. The citizen and carver leaves his wife, Rachel Chrismas, his executrix, and hopes that his children will be "kind and dutiful to her" . . . . "for she hath been a good mother unto them, and a careful and faithful wife unto me." To his sons John and Matthias he leaves forty pounds a piece, hoping "that they will be helpful and assistant to their mother, in completing such works as he is engaged upon, and in collecting such debts as may be due to him." Besides John and Matthias, he had five other sons and three daughters. His son Daniel was a source of trouble to the old man, and his Will marks his displeasure. "To my son Daniel I bequeath five pounds only, inasmuch as he hath been an undutiful son, frequenting gaming-houses," &c. Other items supply materials. He mentions his lands in Kent, which he had bought of his brother-in-law, John Honywood; and a debt of three hundred and forty pounds due to him from the Commissioners of the Navy. Was Rachel Chrismas, Rachel Honywood by birth? and when did she die?

The poetry of a Lord Mayor's pageant of the year 1622 lets us into a fact about Garrett Chrismas that Walpole would have seized and turned to good account when, in his *Anecdotage*, he was correcting and enlarging his delightful "Anecdotes." His editors might have done something with it, and with effect; but they have wholly overlooked it. London's "splendid annual" or new Lord Mayor for the year 1622-3, was Peter Porby, grocer, afterwards Sir Peter P., and a turtle-feeding—Ward—worthy of his day. Sir Peter having a taste for poetry, called in the City poet and City chronologer to his double triumph, Cimon-like, on "land and wave." Thomas Middleton, the dramatist, was the City poet; and Garrett Chrismas was the City Bunning of the year. Their joint labours are part preserved and part commemorated in one of the rarest of the printed City pageants. Mr. Dyce knew nothing of it when, in 1840, he collected Middleton's works. The "noble solemnity" of the day is entitled, "The Triumphs of Honour and Virtue," and it is easy to see that it was a fine one. The poet was pleased with his City Inigo. "For the body of the whole triumph," he says, "with all the proper graces and ornaments of art and workmanship, the reputation of those rightly appertain to the deserts of Master *Garret Crismas*, an exquisite master in his art, and a performer above his promises."

This joint labour with Thomas Middleton was not Gerard or Garrett Chrismas's sole connexion with the City-writing Tom-Tits of his time. The Ironmongers—the tenth on the list of the twelve great companies—called in his aid once with Thomas Dekker, the dramatist, and antagonist of Ben Jonson; and at another time with Thomas Heywood, the most prolific and not by any means the worst of the great and prolific school of Shakesperian dramatists. A recent excellent "History of the Ironmongers' Company" has supplied these new facts in illustration of the history of literature and art in this country.

As I continue my contributions, your readers will find that I have new materials that will both amuse and instruct "architects, engineers, operatives, and artists,"—in other words "master and man," and the "general reader," touching master carpenters and master masons, "joiners and ceilers," painter-stainers, &c., &c., in relation with employers and employed; bearing on tenders and contracts, contingencies and extra charges, wages, extra hours, horse-hire, boat-hire, percentages, old stores, perquisites, and—vails.

PETER CUNNINGHAM.

ON CONSTRUCTION AND ORNAMENT, OLD AND NEW.

A LECTURE was delivered on Tuesday evening, the 5th inst., by Sir Henry Dryden, bart., on the above subject, before the subscribers to the Architectural Museum, at the South Kensington Museum. The chair was occupied by Mr. Beresford Hope, M.A., D.C.L., president of the association, who introduced the lecturer.

Sir Henry Dryden said, that a recent writer of very great common sense had told them that the population of England consisted of 17,000,000 of people, mostly fools. In all human probability he was a fool to come there to lecture, and they—the audience—were fools to come there to listen. Another writer, however, had said that it was the part of wisdom to suffer fools gladly. Almost every audience consisted of three classes: one consisted of those who knew all that the lecturer spoke of much better than he did himself, of which class many were no doubt present: the second were so afraid of dictation that if they were told to go to heaven they would ride straight—elsewhere: the third consisted of the small portion of the assembly who could learn something from the lecturer, and to those he addressed himself. He had been told he might lecture on anything connected with art and architecture, but that he would have to address professional people, art workmen, and ladies. He feared it would require more talent than he possessed to please them all. It would be tedious in a mixed audience to enunciate the arts and sciences implicated in architecture: they were chiefly those with which the designer, the mason, the carpenter, the carver, the smith, the painter, and the glazier had to do. Much had been said and written about the similarity of form, colour, and sound. He had read and heard a good deal about it; but could not see its practical use, although there might be some coincidences. They were told that they could fiddle Salisbury Cathedral, paint God save the Queen, and carve Rule Britannia; but he advised them not to trouble their heads about it; and if they wanted coincident matters, to study a Welsh triad. In reference to the immediate subject, he might say that in old times they strove much for religion and little for bodily comfort: they built great churches and small houses. Now, however, it was all the other way: they built large houses and comparatively cheap churches. The old houses were gone—at least, the most of them,—but the churches remained. Castles had disappeared, or become ruins, or were amalgamated, because we enjoy peace, and they could not be made efficient for the purposes of modern warfare. A new castle in Mediæval style was frightful folly, and when attempted was never really carried out. They confessed their inability to invent beauty, and had therefore to go back to the old models. It was true they invented bridges, and railway sheds, engines, and carriages, and things of that sort, but that was far from inventing beauty. If they were to collect all the cemetery chapels, and all the cemetery monuments, and all the gate lodge in Great Britain, he believed they would have the best collection of ugliness in the world. Some very few of the monuments were by themselves tolerable, but a crop of them was detestable. It seemed as if the aim and object in the construction of lodges was to make them small and uncomfortable. Often the poor old gatekeeper had to go over the way to bed, running the risk of catching bronchitis on the way. If a lady ordered a pair of shoes, or a gentleman a hat, which they could not get on when sent home, they had a right to complain; and in like manner, if a building erected for them was not fit for use, they had a right to complain. It might be fairly required that a church intended for the service of the Church of England should be fit for the performance of the Liturgy, and afford room to stand, to sit, and to kneel in the pews, within the meaning of the Act, and that the building should be capable of being filled by one voice. For the Scotch Kirk they might reasonably require room to sit and stand in the pews, and to see the preacher. Of late the Dissenters had been aping Roman Catholic architecture. For the Roman Catholic Church the requirements were pretty much the same as for the Church of England. If any person or persons wanted a church to be built, and found the cash, or could delude other people into giving it, surely they had a right to build as ugly a thing as they pleased, under the guidance of that eminent architect "A," or "B." If they pulled down an old church, that was another affair. It might be thought, also, that they had a right to make their new horror as unsuited as they liked for its purpose; but he did not know whether they had a moral right in all cases to do this, as perhaps other people would have to pay for the service. A hundred years ago, new churches were generally a parody on Roman architecture: now they were generally a parody on Mediæval architecture. No doubt there were some fine churches built, but there were many obstacles to the building of good churches. First, there was the avarice of this age and nation. Men became architects to get money; and though many, he hoped, had a true admiration for the beautiful, yet the hurry they were in to get the money,—that is, to get into lucrative practice,—prevented, in general, due preparation for their calling; and, in particular, due preparation for each separate work. In old times the architects frequently were provided for in other ways, and often lived close to the spot on which they were to build. The buildings were often years in hand, and, he supposed, had the undivided attention of the architects. The wages were lower than now in proportion to other things. The question of price was a difficult one for the architect to face. A loose way of getting at it was to add together the value of a bushel of oats, wheat, and barley, and to compare that with the price of the labour in question. The attention of the architect nowadays is too much divided. He was expected to be able to furnish plans for churches, schools, houses, cottages, stables, dog-kennels; and what therefore could be expected? If he was a good church architect it was ten to one that he would not know how a horse should lie down or how a dog should be benched; and if he knew the latter the chances were that he was not a good church architect. That was, however, altogether a question for the public. In houses down to the seventeenth century ornament seemed to be very much studied. Somehow modern architects did not hit the thing off. The new was often no more to the old than boys' Latin was to the verses of Virgil. Our fathers, however, made mistakes too. It should be remembered that building differed from designing. They might have a good design badly built or a bad design well built. The mistakes made by the Mediæval men were chiefly those of construction. Their foundations were often bad, their walls were rubble: their mortar was bad, their roofs were bad. The Romans built well, as the walls and buildings still remaining attested. Chichester and Hereford showed bad mechanic and bad construction. In the one case a heavy spire, and in the other case a tower was placed on a Norman substratum not meant to carry any such thing; and the consequence was that the one was down and the other only saved by a good mechanic. Our ancestors made occasional mistakes in design too. In the west front of Peterborough Cathedral three huge arches were to be seen, very fine in themselves, but carrying nothing, and the central arch being the smallest. Amiens and Notre Dame had each three great arches too, but they were made subservient to the upper portions of the buildings; and the centre arch in each case was the largest. The fact was that nature was often
